# Integer Programming and Network Models

With Contributions by

K. Spielberg, E. Richards, B. T. Smith,  
G. Laporte, B. T. Boffey

With 165 Figures  
and 43 Tables

Springer

# CONTENTS

<b>Introduction: Basic Definitions and Results .....</b>	<b>1</b>
<b>a Linear Programming .....</b>	<b>3</b>
a.1 Fundamental Concepts and the Simplex Method .....	3
a.2 Duality and Postoptimality Analysis.....	8
a.3 Problems with Special Structures .....	11
<b>b Analysis of Algorithms.....</b>	<b>13</b>
b.1 Algorithms and Time Complexity Functions.....	13
b.2 Examples of Time Complexity Functions.....	19
b.3 Classes of Problems and Their Relations .....	26
<b>c Graph Theory.....</b>	<b>35</b>
c.1 Basic Definitions and Examples .....	35
c.2 Representation and Storage of Graphs.....	43
c.3 Reachability and Connectivity .....	51
c.4 Graphs with Special Structures .....	57
<b>d Dynamic Programming .....</b>	<b>65</b>
d.1 Basic Ideas .....	65
d.2 A General Algorithm .....	68
d.3 Various Examples .....	73

<b>Part I: Integer Programming .....</b>	<b>87</b>
<b>1 The Integer Programming Problem and its Properties .....</b>	<b>89</b>
1.1 Definitions and Basic Concepts .....	89
1.2 Relaxations of Integer Programming Problems .....	100
1.3 Polyhedral Combinatorics .....	103
<b>2 Formulations in Logical Variables .....</b>	<b>111</b>
2.1 The Modeling of Discrete Variables .....	111
2.2 The Modeling of Fixed Charges .....	113
2.3 Disjunctive Variables .....	114
2.4 Constraint Selection .....	114
2.5 Imposing a Sequence on Variables .....	116
2.6 Imposing a Sequence on Constraints .....	116
2.7 Absolute Values of Functions and Nonconcave Objectives .....	118
2.7.1 A Problem with Collective Absolute Values .....	118
2.7.2 A Problem with Individual Absolute Values .....	119
2.7.3 A Problem with a Nonconcave Objective .....	121
2.8 Piecewise Linear Functions .....	122
2.9 Semicontinuous Variables .....	128
<b>3 Applications and Special Structures .....</b>	<b>129</b>
3.1 Applications .....	129
3.1.1 A Distribution-Location Problem .....	129
3.1.2 A Cutting Stock Problem .....	133
3.1.3 Examination Timetabling .....	135
3.1.4 Forestry Harvesting .....	137
3.1.5 Technology Choice .....	140
3.1.6 Political Districting .....	142
3.1.7 Apportionment Problems .....	144
3.1.8 Open Pit Mining .....	146
3.1.9 Bin Packing and Assembly Line Planning .....	149
3.2 Problems with Special Structures .....	151
3.2.1 Knapsack Problems .....	151
3.2.2 Set Covering, Set Packing, and Set Partitioning Problems.....	155
<b>4 Reformulation of Problems .....</b>	<b>161</b>
4.1 Strong and Weak Formulations .....	161

4.2	Model Strengthening and Logical Processing .....	166
4.2.1	Single Constraint Procedures .....	167
4.2.2	Multiple Constraint Procedures .....	171
4.3	Aggregation .....	177
4.4	Disaggregation .....	185
<b>5</b>	<b>Cutting Plane Methods .....</b>	<b>187</b>
5.1	Dantzig's Cutting Plane Method .....	188
5.2	Gomory's Cutting Plane Methods .....	192
5.3	Cutting Plane Methods for Mixed Integer Programming .....	199
<b>6</b>	<b>Branch and Bound Methods .....</b>	<b>205</b>
6.1	Basic Principles .....	205
6.2	Search Strategies .....	210
6.2.1	Node Selection .....	215
6.2.2	Branch Selection .....	217
6.3	A General Branch and Bound Procedure .....	217
6.4	Difficult Problems .....	219
6.5	Integer Programming Duality and Relaxation .....	222
6.6	Lagrangian Decomposition .....	224
<b>7</b>	<b>Heuristic Algorithms .....</b>	<b>229</b>
7.1	Neighborhood Search .....	230
7.2	Simulated Annealing .....	236
7.3	Tabu Search .....	243
7.4	Genetic Algorithms .....	249
7.5	Other Approaches .....	256
<b>Part II: Network Path Models .....</b>		<b>259</b>
<b>1</b>	<b>Tree Networks .....</b>	<b>261</b>
1.1	Minimal Spanning Trees .....	261
1.1.1	Definitions and Examples .....	261
1.1.2	Solution Techniques .....	264

1.2	Extensions of Minimal Spanning Tree Problems .....	269
1.2.1	Node-Constrained Minimal Spanning Trees .....	269
1.2.2	Edge-Constrained Minimal Spanning Trees .....	270
1.2.3	Alternative Objective Functions .....	272
1.3	Connectivity and Reliability .....	273
1.4	The Steiner Tree Problem .....	276
<b>2</b>	<b>Shortest Path Problems .....</b>	<b>283</b>
2.1	The Problem and its Formulation .....	283
2.2	Applications of Shortest Paths .....	284
2.2.1	Most Reliable Paths .....	285
2.2.2	Equipment Replacement .....	286
2.2.3	Functional Approximation .....	289
2.2.4	Matrix Chain Multiplications .....	290
2.3	Solution Methods .....	291
2.3.1	Dijkstra's Method .....	292
2.3.2	The Bellman-Ford-Moore Algorithm .....	295
2.3.3	The Floyd-Warshall Algorithm .....	298
2.4	Extensions of the Basic Problem .....	303
2.4.1	The $k$ -Shortest Paths Problem .....	303
2.4.2	The Minimum Cost-to-Time Ratio Problem .....	309
2.4.3	The Resource-Constrained Shortest Path Problems .....	311
<b>3</b>	<b>Traveling Salesman Problems and Extensions .....</b>	<b>315</b>
3.1	The Problem and its Applications .....	315
3.1.1	Applications .....	316
3.1.2	Integer Linear Programming Formulations .....	319
3.2	Exact Algorithms .....	322
3.3	Heuristic Algorithms .....	329
3.4	Vehicle Routing Problems .....	333
<b>4</b>	<b>Arc Routing .....</b>	<b>343</b>
4.1	Euler Graphs and Cycles .....	344
4.2	Constructing Eulerian Graphs .....	349
4.3	Rural Postman Problems .....	352
4.4	The Capacitated Arc Routing Problem .....	356

<b>Part III: Network Flow and Network Design Models .....</b>	<b>359</b>
<b>1 Basic Principles of Network Models .....</b>	<b>361</b>
1.1 The Problem and its Formulation .....	361
1.2 Transformations of Flow Problems .....	364
1.3 Duality and Optimality Conditions .....	367
1.4 Some Fundamental Results .....	370
<b>2 Applications of Network Flow Models .....</b>	<b>377</b>
2.1 Building Evacuation .....	377
2.2 Flow Sharing Problems .....	379
2.3 A Worker Allocation Problem .....	382
2.4 Airline Crew Assignment .....	384
2.5 Allocation of Representatives to Committees .....	386
2.6 Computer Program Testing .....	389
2.7 Distributed Computing .....	391
2.8 Matrix Balancing Problems .....	393
2.9 Matrix Rounding Problems .....	395
<b>3 Network Flow Algorithms .....</b>	<b>399</b>
3.1 Maximal Flow Algorithms .....	399
3.1.1 The Method of Ford and Fulkerson .....	399
3.1.2 Karzanov's Preflow Algorithm .....	406
3.2 Feasible Flow Problems .....	412
3.3 Cost-Minimal Flow Problems .....	416
3.3.1 An Augmenting Path Construction Algorithm .....	416
3.3.2 The Primal Improvement Algorithms of Klein .....	419
3.3.3 The Primal-Dual Out-of-Kilter Algorithm .....	422
3.3.4 The Network Simplex Method .....	429
<b>4 Multicommodity Network Flows .....</b>	<b>435</b>
4.1 The Model, its Formulation and Properties .....	435
4.2 Solution Methods .....	440
4.2.1 Price-Directive Decomposition .....	441
4.2.2 Resource Directive Decomposition .....	447
4.3 Network Design Problems .....	452

- 5 Networks with Congestion ..... 457**
  - 5.1 System-Optimal and User-Optimal Network Flows ..... 458
  - 5.2 Solving Flow Assignment Problem ..... 462
  - 5.3 Discrete Route Assignment..... 467
  - 5.4 Network Design Problems ..... 470
    - 5.4.1 Continuous Network Design ..... 471
    - 5.4.2 Discrete Network Design ..... 474
    - 5.4.3 Combined Routing and Discrete Link-Size Determination .... 476
  
- References ..... 479**
  
- Subject Index ..... 501**
