Karsten Keller

Invariant Factors, Julia Equivalences and the (Abstract) Mandelbrot Set

Springer

Contents

1. Introduction 1
1.1 Quadratic iteration and Julia equivalences 1
1.1.1 Some introductory remarks 1
1.1.2 The framework: Topological dynamics and symbolics .. 3
1.1.3 Prerequisites from quadratic iteration 7
1.1.4 From quadratic Julia sets to Julia equivalences 10
1.1.5 Renormalization of quadratic polynomials (I) 13
1.2 The Mandelbrot set 15
1.2.1 Julia equivalences and the Mandelbrot set (I) 15
1.2.2 The system of hyperbolic components 18

2. Abstract Julia sets 25
2.1 Symbolic dynamics for the angle-doubling map 25
2.1.1 Generalized binary expansion 25
2.1.2 Points with periodic kneading sequence 26
2.1.3 Symbolic classification of the points in $\mathbb{T}$ 30
2.2 Invariant laminations 32
2.2.1 Some basic geometric statements 32
2.2.2 Invariant laminations constructed from a 'long' chord . 36
2.2.3 The structure graph 40
2.2.4 Construction of further invariant laminations 45
2.3 Julia equivalences 59
2.3.1 From invariant laminations to Julia equivalences 59
2.3.2 The set of all Julia equivalences 65
2.3.3 Periodic equivalence classes, simple closed curves, and the ramification order 70

3. The Abstract Mandelbrot set 73
3.1 The Abstract Mandelbrot set - an atlas of Abstract Julia sets 73
3.1.1 Symbolic description of the Abstract Mandelbrot set .. 73
3.1.2 Periodic points and Lavaurs' equivalence relation 77
3.1.3 Kneading sequences, visibility and internal addresses .. 79
3.1.4 Further descriptions of the Abstract Mandelbrot set .. 84
3.2 The ordered Abstract Mandelbrot set 91

3.2.1 The subtle structure of $\approx^{\alpha}$ for periodic α 91
3.2.2 'Small' copies of Abstract Julia sets and of the Abstract Mandelbrot set 96
3.2.3 A characterization of points with periodic kneading sequences 101
3.2.4 Sturmian sequences and angle-doubling 102
3.3 Renormalization 107
3.3.1 A symbolic concept for renormalization 107
3.3.2 Renormalization, simple renormalization and tuning .. 112
3.3.3 Further 'small' copies of Abstract Julia sets 115
3.4 Correspondence and Translation Principles 122
3.4.1 Parts of the Abstract Mandelbrot set related to special Julia equivalences 122
3.4.2 Consequences for the (Abstract) Mandelbrot set 132

4. Abstract and concrete theory 141
4.1 Quadratic iteration 141
4.1.1 Julia equivalences and Julia sets 141
4.1.2 Julia equivalences and the Mandelbrot set (II) 146
4.1.3 Renormalization of quadratic polynomials (II) 162
4.1.4 Non-realizable Julia equivalences 169
4.2 Miscellaneous 172
4.2.1 Abstract Julia sets as shift-invariant factors 172
4.2.2 Conjugate (Abstract) Julia sets 174
4.2.3 The cardinality of some equivalence classes 178

A. Appendix: Invariant and completely invariant factors 181
A.1 Simple statements 181
A.2 Shift-invariant factors 184
A.3 Further interesting examples 188
