Igor Konnov

Combined Relaxation Methods for Variational Inequalities

Table of Contents

Notation and Convention						
1.	Variational Inequalities with Continuous Mappings					
	1.1	Probl	em Formulation and Basic Facts	. 3		
		1.1.1	Existence and Uniqueness Results	3		
		1.1.2	Variational Inequalities and Related Problems			
	1.2	Main	Idea of CR Methods.	15		
		1.2.1	Newton-like Iterations	15		
		1.2.2	Basic Properties of CR Methods	. 19		
	1.3	Imple	ementable CR Methods	24		
		1.3.1	A CR Method and its Properties	24		
		1.3.2	Convergence and Rates of Convergence.			
		1.3.3	A Modified Line Search			
		1.3.4	Acceleration Techniques for CR Methods	. 35		
	1.4	Modif	fied Rules for Computing Iteration Parameters			
		1.4.1	A Modified Rule for Computing the Stepsize			
		1.4.2	A Modified Rule for Computing the Descent Direction	n 42		
	1.5	CR M	Iethod Based on a Frank-Wolfe Type Auxiliary			
		Proce	dure	47		
		1.5.1	Description of the Method	47		
		1.5.2	Convergence.	48		
	1.6	CR M	Aethod for Variational Inequalities with			
		Nonlinear Constraints				
		1.6.1	A Modified Basic Scheme for CR Methods	50		
		1.6.2	Description of the Method.	51		
		1.6.3	Convergence.	53		
2.	Variational Inequalities with Multivalued Mappings					
	2.1	Probl	em Formulation and Basic Facts	57		
		2.1.1	Existence and Uniqueness Results	57		
		2.1.2	Generalized Variational Inequalities and			
			Related Problems	60		
		2.1.3	Equilibrium and Mixed Variational Inequality			
			Problems	65		

	2.2	CR Method for the Mixed Variational Inequality Problem		72		
		2.2.1	Description of the Method	. 72		
		2.2.2	Convergence.	74		
		2.2.3	Rate of Convergence.	. 77		
	2.3	Aethod for the Generalized Variational Inequality				
		Problem				
		2.3.1	Description of the Method	80		
		2.3.2	Properties of Auxiliary Mappings.	82		
		2.3.3	Convergence.	.83		
		2.3.4	Complexity Estimates.	85		
		2.3.5	Modifications	92		
	2.4	CR Method for Multivalued Inclusions.		. 95		
		2.4.1	An Inexact CR Method for Multivalued Inclusions	95		
		2.4.2	Convergence.	97		
	2.5	Decor	mposable CR Method.	101		
		2.5.1	Properties of Auxiliary Mappings.	102		
		2.5.2	Description of the Method	104		
		2.5.3	Convergence.	106		
2	4	nliaati	one and Numarical Expaniments	100		
5.	Applications and Numerical Experiments					
	5.1	Inequalities				
		3 1 1	The Provinal Point Method	109		
		3.1.1 3.1.2	Regularization and Averaging Methods	112		
		3.1.2	The Ellipsoid Method	111		
		3.1.5	The Extragradient Method	116		
	32	Econo	omic Equilibrium Problems	118		
	5.2	Economic Equilibrium Models as Complementarity	110			
		5.2.1	Problems	118		
		322	Economic Equilibrium Models with Monotone	110		
		3.2.2	Mannings	119		
		323	The Linear Exchange Model	121		
		3.2.4	The General Equilibrium Model	126		
		3.2.5	The Oligopolistic Equilibrium Model	128		
	3.3	Nume	erical Experiments with Test Problems	133		
		3.3.1	Systems of Linear Equations	.133		
		3.3.2	Linear Complementarity Problems	.134		
		3.3.3	Linear Variational Inequalities	.136		
		3.3.4	Nonlinear Complementarity Problems	.138		
		3.3.5	Nonlinear Variational Inequalities	140		
			*			
4.	Auxiliary Results					
4.1 Feasible Quasi-Nonexpansive Mappings				.143		
		4.1.1	Exterior Point Algorithms	. 143		
		4.1.2	Feasible Point Algorithms	. 145		

4.2 Error Bounds for Linearly Constrained Problems	150					
4.2.1 Preliminaries	150					
4.2.2 Error Bounds						
4.3 A Relaxation Subgradient Method Without Linesearch	154					
4.3.1 Description of the Method						
4.3.2 Convergence						
4.3.3 Rate of Convergence.
