Contents

Preface	vii
1 Historical development of microbial growth theory	1
1.1 The birth of microbiology	2
1.2 Evolution of views on microbial growth, 1900–1930	5
1.3 Jacques Lucien Monod	21
1.4 Verification, refinement and development of the chemostat theory (1950–present)	30
1.5 Microbial growth in natural habitats	62
1.6 Conclusion	93
2 Diversity of patterns of microbial growth <i>in situ</i> and <i>ex situ</i>	96
2.1 Natural microbial populations and ‘laboratory artifacts’	96
2.2 Patterns of microbial growth in soil	98
2.3 Array of laboratory cultivation methods	102
2.4 Conclusion	108
3 Microbial growth under homogeneous conditions	110
3.1 Materials and methods	110
3.2 Microbial growth limited by the source of carbon and energy	118
3.3 Microbial growth limited by conserved substrates	159
3.4 Diauxie	171
3.5 Morphology and sizes of cells	181
3.6 The development of a general kinetic model	187
3.7 Conclusion	236
4 Heterogeneous microbial growth	238
4.1 Growth of colonies on solid agar media	238
4.2 Microbial growth in a system of glass microbeads	253
4.3 Microbial growth in packed columns with inert carrier	256
4.4 Conclusion	260

5	Growth kinetics and the life strategy of microbial populations	262
5.1	Growth kinetics of pure cultures	264
5.2	Mixed microbial cultures	272
5.3	Population dynamics in natural habitats	275
5.4	Conclusion	288
6	Microbial growth in soil	290
6.1	The initial response of microbial community to soil amendments: a kinetic method for the determination of soil microbial mass	292
6.2	Microbial growth in soil as dependent on the pattern of organic substrate input	304
6.3	Microbial growth associated with soil invertebrates	318
6.4	Microbial growth associated with plant roots	321
6.5	Field observations on microbial dynamics	329
6.6	Conclusion	336
	Appendix: Derivation of mathematical models and identification of kinetic parameters	338
A.1	Some instructive rules on the model's derivation	338
A.2	Identification of the kinetic parameters	340
A.3	Numeric integration of ordinary differential equations (ODE) and identification of their parameters	346
	References	351
	Index	371
