Khaled Nagi

Transactional Agents

Towards a Robust Multi-Agent System

Springer

Table of Contents

1 Introduction..1

1.1 General..1

1.2 Motivation of the Work..1

1.3 Scope of the Work..2

1.3.1 Objectives..2

1.3.2 Approach..2

1.3.3 System Evaluation..3

1.4 Organization of the Thesis..4

2 Application Scenario..5

2.1 Overview of the PPC Domain..5

2.2 The Need for Multi-agent Systems in PPC..6

2.3 The Scenario..8

2.4 Sources of Disturbances..15

2.4.1 Technical Disturbances..15

2.4.2 Operational Disturbances..17

2.5 Conclusion..19

3 Overview of Agent Technology..21

3.1 Definitions..21

3.1.1 What Is an Agent?..21

3.1.2 Agent Properties..22

3.1.3 Formal Representation of Agents..22

3.1.4 Layered Agents..23

3.1.5 Agent Taxonomy..26

3.2 Planning in Agents..26

3.2.1 Planning Theory..27

3.2.2 Practical Aspects of Planning..29

3.2.3 Distributed Planning..30

3.2.4 Planning and Execution..31

3.3 Robustness of MAS in IS Domains..31

3.3.1 RETSINA..32

3.3.2 InfoSleuth..33

3.3.3 Social Abstractions Using Agents..34

3.3.4 Approaches for Robustness..34

3.4 Agent Standardization Efforts...35

3.4.1 The Knowledge Sharing Effort..36

3.4.2 The Foundation of Intelligent Physical Agents 37
3.5 Conclusion 39

4 Overview of Transaction Processing 41
4.1 Transactions 41
4.1 Robustness of Transactions 42
4.3 Serializability 42
4.3.1 Theory 42
4.3.2 Equivalence of Histories and Schedules 44
4.3.3 Serialization Graph 44
4.4 Recoverability 45
4.4.1 Centralized Recovery 46
4.4.2 Distributed Recovery 47
4.4.3 Semantic-Based Recovery 48
4.5 Multi-databases 49
4.5.1 Serializability in Multi-databases 50
4.5.2 Recoverability in Multi-databases 52
4.6 Advanced Transaction Models 52
4.7 ACT A 53
4.8 Sagas 54
4.9 Flex 54
4.10ConTracts 55
4.11 Nested Transaction Models 56
4.11.1 Closed-Nested Transaction Model 56
4.11.2 Multi-level Transaction Model 57
4.11.3 Open-Nested Transaction Model 58
4.12 Interactions 59
4.13 Conclusion 61

5 Proposed Approach: Transactional Agents 63
5.1 Problem Statement and Objectives 63
5.2 Proposed Approach: Transactional Agents 67
5.3 System Architecture 70
5.3.1 A Generic MAS Architecture 70
5.3.2 A Robust MAS Architecture 71
5.4 The Planning Agent 72
5.5 The Execution Agent 74
5.6 The Action Repository 76
5.7 Integration with the FIPA Platform 77
5.8 Conclusion 78

6 The Agent Transaction Model 79
6.1 The Need for Extending the Open-Nested Transaction Model 80
6.2 The Transaction Tree 81
6.2.1 The Tree Structure 81
6.2.2 Node States 87

6.2.3 Global Precedence Graph ... 89
6.3 Recovery ... 90
6.3.1 Recovery Strategy ... 90
6.3.2 Backward Recovery ... 92
6.3.3 Forward Recovery ... 94
6.3.4 Example for Recovery ... 95
6.4 Node Types ... 98
6.4.1 Action Nodes ... 99
6.4.2 Control Nodes ... 102
6.4.3 Synchronization Nodes ... 105
6.5 Relaxation of the ACID Properties ... 107
6.6 Serializability ... 108
6.7 Recoverability ... 112
6.8 Conclusion ... 114

7 Robustness Guaranteeing Mechanisms ... 117
7.1 Guaranteeing Correctness ... 118
7.1.1 Scheduling Actions ... 118
7.1.2 Decentralized Cycle Detection ... 118
7.1.3 Guaranteeing Global Serializability ... 120
7.2 Guaranteeing Recoverability ... 121
7.2.1 Recoverability Mechanisms in Each Architectural Component ... 121
7.2.2 Logging at the Execution Agent ... 122
7.2.3 The Need for Coupling Recoverability Mechanisms ... 125
7.2.4 General Solution for Recoverability Coupling ... 128
7.2.5 Solution 1: Distributed Transaction ... 128
7.2.6 Solution 2: Database Relation with *TID* ... 129
7.2.7 Solution 3: DBMS-Specific Solutions ... 131
7.3 Conclusion ... 133

8 Interacting with the Execution Agent ... 135
8.1 Interaction with the Other Agents ... 136
8.1.1 Actions Started by the Planning Agent ... 136
8.1.2 Actions Requested from the Planning Agent ... 137
8.1.3 Actions Invoked by the Execution Agent at Other Execution Agents ... 138
8.2 Supporting the Various Planning Constructs ... 139
8.2.1 Step-by-Step Planning ... 139
8.2.2 Plans with Branching ... 140
8.2.3 Graph-Based Plans ... 141
8.2.4 Flexible Definition of Success ... 144
8.3 Supporting the Various Coordination Patterns ... 145
8.3.1 Task Delegation ... 145
8.3.2 Task Coordination ... 147
8.3.3 Termination Coordination ... 148
8.4 Conclusion ... 149

9 Simulation Study 151
9.1 Simulation Model 151
9.1.1 Workload Model 152
9.1.2 Resource Model 155
9.1.3 Disturbance Model 156
9.2 Performance Indices 158
9.3 Conclusion 159

10 Simulation Results 161
10.1 Scalability of Self-Centered Agents 162
10.1.1 Parameter Settings 162
10.1.2 Effect of Increasing the Degree of Parallel Execution (P) 163
10.1.3 Effect of Increasing the Average Number of Children (Q 166
10.1.4 Effect of Increasing the Tree Depth (5) 169
10.1.5 Lessons Learnt 171
10.2 Long-Running Execution of Agent Plans 172
10.2.1 Parameter Settings 173
10.2.2 Results 173
10.2.3 Lessons Learnt 176
10.3 Coordinated Execution of Agent Plans 176
10.3.1 Parameter Settings 177
10.3.2 Results 177
10.3.3 Lessons Learnt 180
10.4 Conclusion 181

11 Summary and Future Work 183
11.1 Summary 183
11.2 Future Work 184

Appendix I: Agent Implementation Prototype 187
1.1 The Mini World 187
1.2 The Action Repository 188
1.3 The Planning Agent 189
1.4 The Execution Agent 191
