Contents

Series Editor's Preface	v
From the publishers of the Russian edition	xi
A few words about A.N. Kolmogorov	xiii
1. On convergence of series whose terms are determined by random events	1
2. On the law of large numbers	11
3. On a limit formula of A. Khinchin	13
4. On sums of independent random variables	15
5. On the law of the iterated logarithm	32
6. On the law of large numbers	43
7. General measure theory and probability calculus	48
8. On the strong law of large numbers	60
9. On analytical methods in probability theory	62
10. The waiting problem	109
11. The method of the median in the theory of errors	115
12. A generalization of the Laplace-Lyapunov Theorem	118
13. On the general form of a homogeneous stochastic process	121
14. On computing the mean Brownian area	128
15. On the empirical determination of a distribution law	139
16. On the limit theorems of probability theory	147
17. On the theory of continuous random processes	156
18. On the problem of the suitability of forecasting formulas found by statistical methods	169
19. Random motions	176
20. Deviations from Hardy's formulas under partial isolation	179
21. On the theory of Markov chains	182
22. On the statistical theory of metal crystallization	188
23. Markov chains with a countable number of possible states	193
24. On the reversibility of the statistical laws of nature	209

25. Solution of a biological problem	216
26. On a new confirmation of Mendel's laws	222
27. Stationary sequences in Hilbert space	228
28. Interpolation and extrapolation of stationary random sequences	272
29. On the logarithmic normal distribution of particle sizes under grinding	281
30. Justification of the method of least squares	285
31. A formula of Gauss in the method of least squares	303
32. Branching random processes	309
33. Computation of final probabilities for branching random processes	315
34. Statistical theory of oscillations with continuous spectrum	321
35. On sums of a random number of random terms	331
36. A local limit theorem for classical Markov chains	338
37. Solution of a probabilistic problem relating to the mechanism of bed formation	364
38. Unbiased estimators	369
39. On differentiability of transition probabilities of time-homogeneous Markov processes with a countable number of states	395
40. A generalization of Poisson's formula for a sample from a finite set	404
41. Some recent work on limit theorems in probability theory	406
42. On A.V. Skorokhod's convergence	419
43. Two uniform limit theorems for sums of independent terms	429
44. Random functions and limit theorems	442
45. On the properties of P. Levy's concentration functions	459
46. Transition of branching processes to diffusion processes and related genetic problems	466
47. On the classes $\Phi^{(n)}$ of Fortet and Blanc-Lapierre	470
48. On conditions of strong mixing of a Gaussian stationary process	471
49. Random functions of several variables almost all realizations of which are periodic	478
50. An estimate of the parameters of a complex stationary Gaussian Markov process	479
51. On the approximation of distributions of sums of independent terms by infinitely divisible distributions	484
52. Estimators of spectral functions of random processes	505
53. On the logical foundations of probability theory	515

Comments	520
<i>A.N. Kolmogorov</i> . On the papers on probability theory and mathematical statistics	520
Analytical methods in probability theory (No. 9) (<i>A.D. Ventseľ</i>)	522
Markov processes with a countable number of states (No. 10) (<i>B.A. Sevast'yanov</i>)	528
Homogeneous random processes (No. 13) (<i>V.M. Zolotarev</i>)	528
Homogeneous Markov processes (No. 39) (<i>A.A. Yushkevich</i>)	530
Branching processes (Nos. 25, 32, 33, 46) (<i>B.A. Sevast'yanov</i>)	538
Stationary sequences (No. 27) (<i>Yu.A. Rozanov</i>)	539
Stationary processes (No. 48) (<i>V.A. Statulyavichus</i>)	542
Statistics of processes (No. 50) (<i>A.N. Shiryayev</i>)	544
Spectral theory of stationary processes (No. 34) (<i>A.M. Yaglom</i>)	545
Spectral representation of random processes (Nos. 47, 49) (<i>Yu.G. Balasanov and I.G. Zhurbenko</i>)	551
Brownian motion (Nos. 14, 19, 24) (<i>A.M. Yaglom</i>)	554
Markov chains with a countable number of states (No. 23) (<i>A.A. Yushkevich</i>)	559
Wald identities (No. 35) (<i>A.A. Novikov</i>)	567
S-Convergence (No. 42) (<i>A.V. Skorokhod</i>)	569
Uniform limit theorems (Nos. 43, 51) (<i>T.V. Arak</i>)	570
Concentration functions (No. 45) (<i>V.M. Kruglov</i>)	571
Empirical distributions (No. 15) (<i>E.V. Khmaladze</i>)	574
The method of least squares (Nos. 30, 31) (<i>M.B. Malyutov</i>)	583
Unbiased estimators (No. 38) (<i>Yu.K. Belyaev and Ya.P. Lumel'skii</i>)	585
Statistical prediction (No. 18) (<i>A.M. Yaglom</i>)	587
On inter-bed washout (No. 37) (<i>A.B. Visteliuss</i>)	591
