Vector Optimization

Set-Valued and Variational Analysis

4y Springer

Contents

1	Introduction and Mathematical Preliminaries	1
1.1	Convex Cones and Minimal Points	1
1.2	Elements of Set-Valued Analysis	8
1.3	Nonlinear Scalarization Functions	12
1.4	Convex and Generalized Convex Functions	23
1.5	Notations	32
2	Vector Optimization Problems	37
2.1	Vector Optimization (VO)	37
2.2	VO with a Variable Domination Structure	47
2.3	Characterizations of Solutions for VO	50
2.4	Continuity of Solutions for VO	60
2.5	Set-Valued VO with a Fixed Domination Structure	63
2.6	Set-Valued VO with a Variable Domination Structure	73
2.7	Augmented Lagrangian Duality for VO	80
2.8	Augmented Lagrangian Penalization for VO	88
2.9	Nonlinear Lagrangian Duality for VO	93
2.10	Nonlinear Penalization for VO	104
3	Vector Variational Inequalities	111
3.1	Vector Variational Inequalities (VVI)	111
3.2	Inverse VVI	126
3.3	Gap Functions for VI	134
3.4	Set-valued VVI	141
3.5	Stability of Generalized Set-valued Quasi-VI	146
3.6	Existence of Solutions for Generalized Pre-VVI	151
3.7	Existence of Solutions for Equilibrium Problems	158
3.8	Vector Complementarity Problems (VCP)	163
3.9	VCP with a Variable Domination Structure	173

4	Vector Variational Principles	183
4.1	Variational Principles for Vector-Valued Functions.	184
4.2	Variational Principles for Set-Valued Functions.	201
4.3	Equivalents of Variational Principles for Vector-Valued Functions.	214
4.4	Equivalents of Variational Principles for Set-Valued Functions .	222
4.5	Extended Well-Posedness in Vector-Valued Optimization. . . .	229
4.6	Extended Well-Posedness in Set-Valued Optimization.	241
5	Vector Minimax Inequalities	255
5.1	Minimax Inequalities for Set-Valued Functions.	255
5.2	Minimax Inequalities for Vector-Valued Functions.	265
6	Vector Network Equilibrium Problems	271
6.1	Weak Vector Equilibrium Problem.	271
6.2	Vector Equilibrium Problem.	281
6.3	Dynamic Vector Equilibrium Problem.	285
