Daniel Quadt

## Lot-Sizing and Scheduling for Flexible Flow Lines

^J Springer

## Contents

1	Inti	roduction	. 1
	1.1	Lot-Sizing and Scheduling	2
	1.2	Flexible Flow Lines.	4
	1.3	Characteristics of the Problem	5
	1.4	Scope and Outline of the Study	. 9
2	Lac	k of Solution Procedures in the Literature	
	2.1	Lot-Sizing Problems	. 12
	2.2	Scheduling Problems.	13
		2.2.1 Branch&Bound Procedures	. 13
		2.2.2 Local Search and Metaheuristics	15
		2.2.3 Stage Decomposition Approaches	. 16
		2.2.4 Job-Oriented Procedures	. 20
		2.2.5 (Sequential) Loading and Sequencing Algorithms	
	2.3	Summary and Conclusion	22
3	An	Integrative Solution Approach	23
4	Pha	ase I: Bottleneck Planning	29
	4.1	Lot-sizing and Scheduling on Parallel Machines.	30
	4.2	Literature Review.	. 35
		4.2.1 Back-Order Literature	. 36
		4.2.2 Setup Carry-Over Literature	. 37
		4.2.3 Parallel Machines Literature	. 41
	4.3	Standard Models with Extensions.	. 44
		4.3.1 Capacitated Lot-Sizing Problem with Linked Lot-Sizes	
		(CLSPL).	44
		4.3.2 CLSPL with Back-Orders and Parallel Machines	
		(CLSPL-BOPM).	. 45

		4.3.3 Capacitated Lot-Sizing Problem with Sequence- Dependent Setups, Back-Orders and Parallel Machines	5			
		(CLSD-BOPM)				
	4.4	Solution Approach	49			
		4.4.1 A Novel Heuristic Model	50			
		4.4.2 Solution Procedure	61			
		4.4.3 Rolling Planning Horizon	75			
	4.5	Computational Results.				
		4.5.1 Effect of Problem Characteristics	. 77			
		4.5.2 Effect of Capacity Adjustment and Time Limit	102			
		4.5.3 Effect of Problem Size	110			
	4.6	Summary.	122			
5	Phase II: Schedule Roll-Out					
	5.1	Premises and Scope.	125			
	5.2	Scheduling Non-Bottleneck Production Stages	127			
		5.2.1 Step 1: Batching and Machine-Assignment	127			
	50	5.2.2 Step 2: Generation of Machine/Time Slots	132			
	5.5	I wo Remarks on the Resulting Schedule	. 134			
	5.4	Summary.	130			
6	Phase III: Product-to-Slot Assignment					
	6.1	Goal Trade-Off	138			
	6.2	Genetic Algorithms.	139			
	6.3	Solution Procedure: Two Nested Genetic Algorithms	141			
		6.3.1 Setting Target Values	142			
		6.3.2 The Inner Genetic Algorithm: Creating a Product	1 4 7			
		Schedule Using the Target Values	. 145			
		6.3.3 The Outer Genetic Algorithm: Calculating New				
	~ .	Target Values				
	6.4	Computational Results	16/			
		6.4.1 Parameter Optimization	16/			
	~ ~	6.4.2 Effect of Problem Characteristics.	1//			
	6.5	Summary.	186			
7	An	Illustrative Example	187			
	7.1	Data of the Example.	187			
	7.2	Solution after Phase I	189			
	7.3	Solution after Phase II.	189			
	7.4	Solution after Phase III	. 190			
8	An	Application in the Semiconductor Industry	195			
	8.1	Semiconductor Process Flow	195			
	8.2	Problem Specifics and Dimensions	197			
	8.3	Modeling Assumptions				
		0 1				

			Contents	XI
	8.4	Short-Term Production Planning		199
	8.5	Medium-Term Capacity Planning		. 199
