

George Z. Voyiadjis and Chung R. Song

The Coupled Theory of Mixtures in Geomechanics with Applications

 Springer

Contents

1	Introduction	1
1.1	Historical Review of the Theory of Mixtures for Geo-materials	3
1.1.1	The Early Era	3
1.1.2	The Classical Era	5
1.1.3	The Modern Era	7
2	Flow in Geo-materials	11
2.1	Nature of Geo-materials	11
2.2	Flow of Water in Geo-Materials	13
2.2.1	Steady Flow	13
2.2.2	Transient or Non-steady Flow	13
3	Coupled Theory of Mixtures	15
3.1	Traditional Theory of Mixtures	15
3.1.1	Terzaghi's Consolidation Theory	15
3.1.2	Biot's Consolidation Theory	16
3.2	Modern Theory of Mixtures for Finite Strain	17
3.2.1	Balance of Mass	18
3.2.2	Coupling of Mass Balance Equation and Darcy's Law ..	20
4	Coupling Yield Criteria and Micro-mechanics with the Theory of Mixtures	23
4.1	Soil Models	23
4.2	Anisotropic Soil Model	30
4.2.1	Anisotropic Modified Cam Clay Model	33
4.3	Elasto-Plastic Constitutive Relations	36
4.4	Micro-Mechanical Considerations/Bridging Different Length Scales	38
4.4.1	RVE Concept	39
4.4.2	Characteristic Length	40
4.4.3	Bridging Different Length Scales	45
4.5	Micro-mechanisms	50
4.5.1	Back Stress	50
4.5.2	Rotation of Particles	55

4.5.3	Grain Interaction	63
4.5.4	Rate Dependency	68
4.5.5	Damage of Solid Grains	73
4.5.6	Summary of Micro-mechanisms	74
4.6	Equation of Equilibrium of the External and Internal Forces in an Updated Lagrangian Reference Frame	76
5	Finite Element Formulations	83
5.1	Updated Lagrangian Reference Scheme	83
5.2	Finite Element Implementation	86
5.3	Remeshing and Return to Yield Surface	89
6	Applications	91
6.1	Piezocone Penetration Test (PCPT)	91
6.1.1	Introduction	91
6.1.2	Current Practice of Determining Hydraulic Properties from the Piezocone Penetrometer	93
6.1.3	New Approaches	95
6.1.4	Evaluation	115
6.2	(Shield) Tunneling	116
6.2.1	Introduction	116
6.2.2	Method of Analysis	119
6.2.3	Finite Element Numerical Simulation	122
6.2.4	Remeshing	126
6.2.5	Mapping Variables	128
6.2.6	Modeling of Interface Friction	134
6.2.7	Case Study of N-2 Tunnel	138
6.3	Estimation of Hydraulic Conductivity using Acoustic Technique	150
6.3.1	Introduction	150
6.3.2	Basics of Wave Propagation in Saturated Media	151
6.3.3	Applicability	155
6.4	Evaluation	157
7	Advanced Topics	161
7.1	Nano-mechanics for Geotechnical Engineering	161
7.1.1	Introduction	161
7.1.2	Brief History of Nano-mechanics	162
7.1.3	Nano-mechanics as a General Platform for Studying Detailed Behavior of Geo-materials	163
7.1.4	Nano-mechanics as a Tool to Study Macro-level Material Properties Through Continuumization	167
7.1.5	Space Science Application	171
7.2	Coupled Behavior of Micro-Mechanisms	172

7.2.1	Introduction	172
7.2.2	Simplification of Equations Incorporating the Physical Behavior of Soils	173
7.2.3	Rate Dependency	175
7.2.4	(Strain) Gradient	179
7.2.5	Damage	180
7.2.6	Permeability	182
7.2.7	Anisotropy and Plastic Spin	184
7.2.8	Experimental Verification of Coupled Pore Pressure Around a Cone Tip	188
7.2.9	Back Stress	201
7.2.10	Evaluation	204
Appendix: Fortran Codes of CS-S		207
