

Stefan Rostek

Option Pricing in Fractional Brownian Markets

 Springer

Contents

1	Introduction	1
2	Fractional Integration Calculus	5
2.1	The Stochastic Process of Fractional Brownian Motion	7
2.2	Serial Correlation: The Role of the Hurst Parameter	13
2.3	The Wick-Based Approach to Fractional Integration	17
2.4	Pathwise and Stratonovich Integrals	22
2.5	Some Important Results of the Wick Type Fractional Integration Calculus	25
2.6	The S-Transform Approach	28
3	Fractional Binomial Trees	33
3.1	Binomial Approximation of an Arithmetic Fractional Brownian Motion Process	34
3.2	Binomial Approximation of the Conditional Moments of Fractional Brownian Motion	40
3.3	Binomial Approximation of a Geometric Fractional Price Process	44
3.4	Arbitrage in the Fractional Binomial Market Setting and Its Exclusion	49
4	Characteristics of the Fractional Brownian Market: Arbitrage and Its Exclusion	57
4.1	Arbitrage in the Unrestricted Continuous Time Setting	58
4.1.1	Arbitrage in the Continuous Setting Using Pathwise Integration	58
4.1.2	Arbitrage in the Continuous Time Setting Using Wick-Based Integration	60
4.2	Diverse Approaches to Exclude Arbitrage	62
4.2.1	Excluding Arbitrage by Extending the Wick Product on Financial Concepts	62

4.2.2	Regularization of Fractional Brownian Motion	67
4.2.3	Mixed Fractional Brownian Motion	67
4.2.4	Market Imperfections	68
4.3	On the Non-compatibility of Fractional Brownian Motion and Continuous Tradability	69
4.3.1	Itô and Stratonovich Formulations of the Classical Option Pricing Problem: The Work of Sethi and Lehoczky (1981)	69
4.3.2	Wick–Itô and Stratonovich Formulations of the Fractional Option Pricing Problem	73
4.4	Renouncement of Continuous Tradability, Exclusion of Arbitrage and Transition to Preference-Based Pricing	77
5	Risk Preference-Based Option Pricing in a Continuous Time Fractional Brownian Market	79
5.1	Motivation and Setup of the Model	79
5.2	The Conditional Distribution of Fractional Brownian Motion	81
5.2.1	Prediction Based on an Infinite Knowledge About the Past	81
5.2.2	Prediction Based on a Partial Knowledge About the Past	86
5.3	A Conditional Fractional Itô Theorem	89
5.4	Fractional European Option Prices	92
5.5	The Influence of the Hurst Parameter	99
5.6	The Influence of Maturity and the Term Structure of Volatility	106
6	Risk Preference-Based Option Pricing in the Fractional Binomial Setting	111
6.1	The Two-Time Total Equilibrium Approach	113
6.2	The Two-Time Relative Equilibrium Approach	116
6.3	Multi-Time Equilibrium Approaches	121
6.3.1	Multi-Time Equilibria with Respect to Current Time t	121
6.3.2	Local Multi-Time Equilibria	125
6.4	Deeper Insights Provided by Discretization: The Continuous Time Case Reconsidered	128
7	Conclusion	131
