Contents

Preface	V
Introduction	1
Chapter 1. MACROECONOMETRIC MODELS WITH QUANTITY RATIONING	7
1.1. Non-Walrasian Economic Concepts	9
1.1.1. Institutional framework: the rationing scheme.	9
1.1.2. Perceived and expected constraints	11
1.1.3. Effective demand and notional demand. The spill-over effects	13
1.1.4. Equilibrium with rationing and the formalisation in terms of equilibrium.	15
1.2. A Reference Macroeconomic Model	17
1.2.1. The general framework	17
1.2.1.1. <i>The accounting framework</i>	18
1.2.1.2. <i>The assumptions about rationing</i>	19
1.2.2. The microeconomic foundations.	23
1.2.2.1. <i>Households' behaviour</i>	24
● <i>Derivation of the utility function U_H</i>	25
● <i>Consumption and labour supply functions</i>	28
● <i>An example</i>	30
● <i>A graphical illustration</i>	32
1.2.2.2. <i>Firms' behaviour</i>	33
1.2.3. The complete model	38
1.2.3.1. <i>The determination of production and employment</i>	38
1.2.3.2. <i>The model's answer to exogenous shocks and the importance of the typology of regimes</i>	41
1.3. A Theoretical Framework for the Study of Structural Changes	47
1.4. The Problems in Specifying a Macroeconomic Model with Quantity Rationing	51
1.4.1. The rationing scheme in the labour market	52
1.4.2. The specification of spill-over effects.	56
1.4.3. The exiguity of the accounting framework	59
1.5. A Survey of the Macroeconomic Models with Quantity Rationing	60

Conclusion	72
Notes	73
Chapter 2: THE SUGGESTED MODEL	79
2.1. General Structure and Overview	80
2.1.1. The assumptions regarding the behaviour of agents	80
2.1.2. The determination of production and employment.	83
2.1.3. The interpretation scheme and the regime typology	84
2.1.4. The fundamental role of production function	87
2.2. The Specification of the Production Function.	88
2.2.1. The choice of the specification	89
2.2.2. The specification adopted	91
2.2.2.1. <i>Formalization and meaning of the variables.</i>	91
2.2.2.2. <i>Obsolescence: The scrapping condition.</i>	92
2.2.3. The functioning of the production function in the Keynesian regime case.	96
2.3. The Specification of the Complete Model	98
2.3.1. Block 1—Demand.	99
2.3.2. Block 2—Production capacity.	101
2.3.3. Block 3—Labour supply	102
2.3.4. Block 4—Effective production and employment	104
2.4. Structural Change and External Disequilibria	105
2.4.1. Structural change	105
2.4.2. External disequilibria	111
Conclusion	114
Notes	115
Chapter 3. ECONOMETRIC STUDY OF MODELS WITH UNKNOWN POINTS OF STRUCTURAL CHANGE	119
3.1. A Survey of the Estimation Techniques in the Case of Two-regime Regression Models	119
3.1.1. The general formulation of switching regression models (SRM) and the adopted notation	120
3.1.2. The SRM typology	123
3.1.2.1. <i>SRM with stochastic assignment</i>	124
● <i>The log-likelihood function (L)</i>	124
● <i>The direct maximisation of L not being advisable</i>	125
● <i>leads to the utilisation of other approaches</i>	125
3.1.2.2. <i>SRM with deterministic assignment</i>	128
● <i>The structural change tests in a particularly interesting case</i>	128
● <i>The general case</i>	130
3.1.2.3. <i>SRM with mixed assignment.</i>	136
3.1.3. Application to the estimation of quantity rationing models (QRM)	136
3.1.3.1. <i>QRM with stochastic assignment</i>	140

● <i>A complex likelihood function</i>	141
● <i>which is not appropriate for optimisation methods</i>	142
3.1.3.2. <i>QRM with deterministic assignment</i>	142
● <i>A non-differentiable likelihood function</i>	143
● <i>... leads, in general, to the utilisation of approximations</i>	143
3.1.3.3. <i>Some considerations about the choice of the stochastic specification in a macroeconomic rationing model</i>	146
3.2. The Estimation Method Suggested	147
3.2.1. <i>The complete model</i>	147
3.2.2. <i>The estimation difficulties</i>	148
3.2.2.1. <i>The problem of endogenous variables not statistically observed</i>	148
3.2.2.2. <i>The existence of the min operator</i>	149
3.2.2.3. <i>The non-derivability of the production function</i>	152
3.2.3. <i>The estimation procedure</i>	153
3.2.4. <i>The justification of the estimation method</i>	155
3.2.4.1. <i>Consistent estimators</i>	155
3.2.4.2. <i>An estimation of Clay–Clay model without restrictive assumptions</i>	156
● <i>The current estimations of the Clay–Clay model</i>	157
● <i>Comparative analysis</i>	161
Conclusion	165
Notes	165
Chapter 4. EMPIRICAL APPLICATION: A STUDY OF THE ECONOMIC CONSEQUENCES OF THE PORTUGUESE REVOLUTION OF 1974	173
4.1. The Data and the Problem Formulation	173
4.1.1. <i>The data</i>	173
4.1.1.1. <i>The scope of the study</i>	173
4.1.1.2. <i>The methodology used in the construction of the series</i>	176
4.1.2. <i>The definition of the problem</i>	181
4.1.2.1. <i>A very brief presentation of the Portuguese economy before 1974</i>	181
4.1.2.2. <i>A combination of shocks</i>	184
4.2. The Results	187
4.2.1. <i>Presentation of the results</i>	187
4.2.1.1. <i>The bottlenecks in economic activity</i>	187
4.2.1.2. <i>External disequilibria</i>	194
4.2.2. <i>The robustness of the results</i>	195
Conclusion	199
Notes	200
GENERAL CONCLUSION	205
APPENDICES	
Appendix 1. Glossary of Variables and Main Parameters	211

Appendix 2. Computation of Analytical Expressions for the First Partial Derivatives of Ψ	217
Appendix 3. Choice of the Minimum for PS as Optimisation Criterion	221
Appendix 4. Results	225
Appendix 5. Statistical Data and Their Sources	227
Appendix 6. Estimation of the Model using French Data	239
Bibliography	247
