(Eds.)

# Earthquake Source Asymmetry, Structural Media and Rotation Effects

With 223 Figures

 Springer

## Contents

### PART I MACROSEISMIC ROTATION EFFECTS AND MICROMOTIONS.....1

#### 1 Development of Earthquake Rotational Effect Study

*Jan T. Kozák* ..... 3

#### 2 Sources of Rotation and Twist Motions

*Roman Teisseyre, Jan T. Kozák* ..... 11

2.1 Introduction ..... 11

2.2 Elements of the Basic Theory ..... 15

2.3 Recording the Rotation and Twist Motions ..... 18

#### 3 Some Examples of Rotation Effects: the Tulbagh Earthquake, South Africa

*Gerhard Graham, Andrzej Kijko* ..... 25

### PART II THEORY OF CONTINUA AND FIELDS OF DEFECTS 29

#### 4 Deviations from Symmetry and Elasticity: Asymmetric Continuum Mechanics

*Roman Teisseyre, Wojciech Boratyński* ..... 31

4.1 Introduction ..... 31

4.2 Symmetric Stresses: Motion Equations ..... 33

4.3 Thermal Deformations ..... 34

4.4 The Maxwell and Voigt–Kelvin Bodies: Equivalence Theorems ..... 35

4.5 Asymmetric Fields ..... 36

#### 5 Degenerated Asymmetric Continuum Theory

*Roman Teisseyre, Mariusz Białecki, Marek Górski* ..... 43

5.1 Introduction ..... 43

5.2 Transition to Symmetric Tensor of Potentials ..... 49

5.3 Special Case ..... 52

5.4 Conclusions ..... 53

## 6 Continuum with Rotation Nuclei and Defects: Dislocation and Disclination Densities

<i>Wojciech Boratyński, Roman Teisseyre</i> .....	57
6.1 Introduction .....	57
6.2 Defect Density Fields .....	60
6.3 Dislocation–Stress Relations .....	63
6.4 Equations of Motion .....	64
6.5 Discussion.....	65

## 7 Towards a Discrete Theory of Defects

<i>Mariusz Bialecki</i> .....	67
7.1 Introduction .....	67
7.2 Towards a Discrete Description .....	69
7.3 Discrete Weingarten Theorem.....	71
7.4 Prospects.....	74
Appendix: Discrete Integration by Parts .....	75

## 8 Fault Dynamics and Related Radiation

<i>Wojciech Boratyński, Roman Teisseyre</i> .....	77
8.1 Introduction .....	77
8.2 Fault and Related Stresses .....	78
8.3 Evolution Equations for Dislocations and Disclinations .....	78
8.4 Motion Equations: Fault and Radiation Parts.....	79
8.5 Discussion.....	88

## 9 A Review on Friction

<i>Panayiotis Varotsos, Mary Lazaridou</i> .....	91
9.1 Introduction .....	91
9.2 Stick-Slip Friction of a Granular System. Hysteresis and Precursors .....	93
9.3 Rock Friction .....	97
9.4 Laboratory Experiments at High Rates of Slip. The Energy Budget for Tectonic Faulting.....	102
9.5 Modern Views on Friction. Theoretical Studies.....	104
9.6 Constitutive Friction Law for the Antisymmetric Stresses.....	107
9.7 Open Questions .....	108

## 10 Soliton Physics

<i>Eugeniusz Majewski</i> .....	113
10.1 Introduction .....	113
10.2 The Discovery of Solitary Waves.....	115
10.3 The Korteweg–de Vries Equation .....	115

10.4	The Modified Korteweg–de Vries Equation.....	117
10.5	The Kadomtsev–Petviashvili Equation.....	117
10.6	The Boussinesq Equations.....	118
10.7	The Doubly Dispersive Equations.....	119
10.8	The Nonlinear Schrödinger Equation.....	119
10.9	The Nonlinear Klein–Gordon Equation.....	120
10.10	The Sine-Gordon Equation.....	121
10.11	The Inverse Scattering Transform.....	121
10.12	Rotating Solitons.....	122
10.13	Discrete Soliton Systems.....	124
10.14	Conclusions.....	126

**PART III ROTATION MOTIONS, SEISMIC SOURCE MODELS, AND ASYMMETRY OF FRACTURE ..... 129**

**11 Rotational Motions Excited by Earthquakes**

<i>Minoru Takeo</i> .....	131
11.1 Introduction.....	131
11.2 Geometrical Theory of Defects.....	132
11.3 Formulation of Rotational and Translational Motions Due to Earthquakes.....	145
11.4 Possibility of Estimating a Rotational Strain Tensor Due to an Earthquake.....	149
11.5 Conclusions.....	154

**12 Ground Rotational Motions Recorded in Near-Source Region of Earthquakes**

<i>Minoru Takeo</i> .....	157
12.1 Introduction.....	157
12.2 Observational System.....	158
12.3 Near-Source Ground Rotational Motions.....	158
12.4 Discussion.....	161

**13 Fracture-Band Geometry and Rotation Energy Release**

<i>Roman Teisseyre, Marek Górski, Krzysztof P. Teisseyre</i> .....	169
13.1 Introduction.....	169
13.2 Earthquake Dislocation Theory.....	169
13.3 Earthquake Thermodynamics and Fracture Band Model.....	171
13.4 Elastic Rotation Energy.....	173
13.5 Cross-Band Fracturing Model and Rotation Processes.....	175
13.6 Conclusions.....	182

---

<b>14</b>	<b>Rotation Motions: Recording and Analysis</b>	
	<i>Krzysztof P. Teisseyre, Jerzy Suchcicki</i> .....	185
14.1	Introduction .....	185
14.2	Examples of Records and Their Preliminary Analysis.....	186
14.3	Discussion.....	196
<b>15</b>	<b>Glacier Motion: Seismic Events and Rotation/Tilt Phenomena,</b>	
	<i>Marek Górski, Krzysztof P. Teisseyre</i> .....	199
15.1	Introduction .....	199
15.2	Icequakes .....	199
15.3	Ice Vibrations .....	201
15.4	Discussion.....	214
<b>16</b>	<b>Rotational Energy and Angular Momentum of Earthquakes</b>	
	<i>Eugeniusz Majewski</i> .....	217
16.1	Introduction .....	217
16.2	Modelling the Rotational Motions Excited in Earthquake Sources as Rolling Motions.....	217
16.3	Rolling in the Earthquake Source as Translation and Rotation Combined .....	218
16.4	The Kinetic Energy of Rolling in the Earthquake Source .....	219
16.5	Modelling Purely Rotational Motions in the Earthquake Source.....	221
16.6	The Torque and Angular Momentum of the Earthquake Source.....	222
16.7	Modelling Rotational Motions in the Earthquake Source as a Turbulence of Grains and Blocks Between Moving Tectonic Plates.....	223
16.8	Conclusions .....	225
<b>17</b>	<b>Bend-Rotation Wave as a Mechanism of Macroseismic Effects</b>	
	<i>Vladimir Aksenov</i> .....	227
17.1	Introduction .....	227
17.2	Experimental Data .....	229
17.3	Field Observations.....	236
17.4	Conclusions .....	238
<b>18</b>	<b>Solitary Waves in Crustal Faults and their Application to Earthquakes</b>	
	<i>Victor G. Bykov</i> .....	241
18.1	Introduction .....	241
18.2	Observational Evidence.....	242

18.3	Mathematical Model of Deformation Process .....	243
18.4	Solitary Wave of Fault Activation .....	245
18.5	Evolution of Waves of Fault Activation .....	246
18.6	Effect of Periodical Change of Friction in the Fault .....	247
18.7	Effect of Periodical Change of External Load .....	248
18.8	Conclusions .....	251
<b>19</b>	<b>Seismic Rotation Waves: Spin and Twist Solitons</b>	
	<i>Eugeniusz Majewski</i> .....	255
19.1	Introduction .....	255
19.2	Modelling the Rotational Motions Excited in Earthquake Sources .....	256
19.3	Seismic Rotation Waves: <i>PR</i> and <i>SR</i> Waves .....	257
19.4	The Slow Tectonic Rotation Waves .....	258
19.5	Hamilton's Principle .....	259
19.6	A Rock Medium Modelled as a Nonlinear Micropolar Elastic Continuum .....	259
19.7	The Nonlinear Field Equations .....	261
19.8	The Linear Seismic Rotation Waves .....	261
19.9	The Nonlinear Seismic Rotation Waves .....	263
19.10	Dispersion Curves and Rotation Solitons .....	266
19.11	The Seismic Rotation Solitons in the Degenerated Continuum .....	267
19.12	Conclusions .....	270
<b>20</b>	<b>Earth Rotation, Elasticity and Geodynamics: Earthquake Wave Rotary Model</b>	
	<i>Alexander V. Vikulin</i> .....	273
20.1	Introduction .....	273
20.2	Hypothesis .....	274
20.3	Stress Field Related to Rotation of Hard Bodies .....	275
20.4	Interaction Between Seismofocal Blocks .....	279
20.5	Chain of Blocks: Application to Pacific Margin Seismic Belt .....	280
20.6	Friction and Irregularities of Block Rotation: Rotation Mechanics of Earthquake Foci .....	282
20.7	Some Consequences .....	284
20.8	Conclusions .....	286

**PART IV EFFECTS RELATED TO MEDIUM STRUCTURES  
AND COMPLEXITY OF WAVE PROPAGATION ..... 291**

**21 Seismic Rotation Waves in the Continuum with Nonlinear  
Microstructure**

<i>Eugeniusz Majewski</i> .....	293
21.1 Introduction .....	293
21.2 Additivity of Elastic and Self-Parts of Stresses, Microstresses, and Interaction Microforces.....	294
21.3 The Macroscopic and Microscopic Balance Equations.....	294
21.4 The Nonlinear Microstructure .....	298
21.5 Conclusions .....	299

**22 Tectonic Solitons Propagating Along the Fault**

<i>Eugeniusz Majewski</i> .....	301
22.1 Introduction .....	301
22.2 Seismic Waves in the Continuum with Dislocations.....	301
22.3 Seismic P waves .....	304
22.4 Splitting the Elastic Distortion Soliton Equation into Seismic and Fault-Related Soliton Equations.....	305
22.5 Seismic S Waves .....	306
22.6 Conclusions .....	308

**23 Complexity of Rotation Soliton Propagation**

<i>Eugeniusz Majewski</i> .....	311
23.1 Introduction .....	311
23.2 Preliminary Assumptions .....	311
23.3 Seismic Rotation Solitons.....	312
23.4 Conclusions .....	314

**24 Micromorphic Continuum with Defects and Taylor–Bishop–Hill  
Theory for Polycrystals: Anisotropic Propagation of Seismic  
Waves and the Golebiewska Gauge**

<i>Jun Muto, Yusuke Kawada, Hiroyuki Nagahama</i> .....	317
24.1 Introduction .....	317
24.2 Micromorphic Continuum with Defects.....	318
24.3 Taylor–Bishop–Hill Model.....	320
24.4 Quartz <i>c</i> -axis Preferred Orientation in Quartz Schist.....	321
24.5 Seismic Anisotropy due to LPO in Deformed Rocks.....	323
24.6 Discussion.....	324
24.7 Conclusion.....	326

<b>25 Seismic Ray Theory for Structural Medium based on Kawaguchi and Finsler Geometry</b>	
<i>Takahiro Yajima, Hiroyuki Nagahama</i> .....	329
25.1 Introduction .....	329
25.2 Finsler Geometry and Seismic Ray .....	330
25.3 Seismic Finsler Metric and Kawaguchi Space .....	331
25.4 Discussion.....	333
<b>26 From Non-Local to Asymmetric Deformation Field</b>	
<i>Hiroyuki Nagahama, Roman Teisseyre</i> .....	337
26.1 Introduction .....	337
26.2 High-Order Spaces and Non-Locality of Deformation.....	338
26.3 An Interaction Field Between Microscopic and Macroscopic Deformation Fields .....	339
26.4 Asymmetry and Anholonomy of Deformation.....	341
26.5 Discussion.....	342
<b>27 Earthquake Hazard in the Valley of Mexico: Entropy, Structure, Complexity</b>	
<i>Cinna Lomnitz, Heriberta Castaños</i> .....	347
27.1 Introduction .....	347
27.2 Seismology: a Science in Trouble?.....	348
27.3 Disasters in General, and Mexico City in Particular .....	349
27.4 A Higher Level of Description .....	351
27.5 Nonlinearity and Non-Equilibrium Thermodynamics.....	354
27.6 A Theory of Disasters as Unexpected Events.....	358
27.7 Disasters and Society.....	361
<b>PART V SEISMIC ROTATIONAL MOTIONS: RECORDING TECHNIQUES AND DATA ANALYSIS.....</b>	<b>365</b>
<b>28 Note on the Historical Rotation Seismographs</b>	
<i>Graziano Ferrari</i> .....	367
28.1 Introduction .....	367
28.2 Electrical Seismograph with Sliding Smoked Paper .....	371
28.3 Electrical Seismograph with Sliding Smoked Paper – Second Model .....	374
<b>29 Ring Laser Gyroscopes as Rotation Sensors for Seismic Wave Studies</b>	
<i>K. Ulrich Schreiber, Geoffrey E. Stedman, Heiner Igel, Asher Flaws</i>	377
29.1 Introduction .....	377

29.2 Properties of Ring Lasers .....	379
29.3 Detection of Seismic Signals .....	385
29.4 GEOsensor .....	387
<b>30 Rotational Motions in Seismology: Theory, Observation, Simulation</b>	
<i>Alain Cochard, H. Igel, B. Schuberth, W. Suryanto, A. Velikosevtsev, U. Schreiber, J. Wassermann, F. Scherbaum, D. Vollmer</i> .....	391
30.1 Introduction .....	391
30.2 Fundamental Theory .....	394
30.3 Rotational Measurements .....	399
30.4 Observations and Simulations of Rotational Motions .....	401
30.5 Discussion and Conclusions .....	407
<b>31 Absolute Rotation Measurement Based on the Sagnac Effect</b>	
<i>Leszek R. Jaroszewicz, Zbigniew Krajewski, Lech Solarz</i> .....	413
31.1 Introduction .....	413
31.2 Sagnac Effect .....	413
31.3 Optical Gyroscopes as Systems Utilizing the Sagnac Effect .....	416
31.4 Fundamental Measurement Limits .....	419
31.5 Fiber-Optic Rotational Seismometer (FORS) .....	420
31.6 Investigation of the SRE Propagation Velocity .....	433
31.7 Conclusions .....	435
<b>32 Design of Rotation Seismometer and Non-Linear Behaviour of Rotation Components of Earthquakes</b>	
<i>Takeo Moriya, Roman Teisseyre</i> .....	439
32.1 Introduction .....	439
32.2 Design of the Rotation Seismometer .....	440
32.3 Absolute Rotation Component Amplitudes for Earthquakes Observed at Sites of Different Surface Geological Conditions .....	444
32.4 Results and Future Scope .....	449
<b>33 Rotation and Twist Motion Recording – Couple Pendulum and Rigid Seismometers System</b>	
<i>Jan Wiszniowski</i> .....	451
33.1 Introduction .....	451
33.2 Behaviour of a Pendulum Seismometer During Measurement of Rotations – Static Approach .....	452
33.3 Measurement of Rotations by a Pair of Seismometers – Influence of Seismic Waves on Signal .....	454

33.4	Influence of Small Differences in Channel Responses on Rotation Measurement – Dynamic Approach .....	460
33.5	The Pendulum Seismometer for Measurement of Rotations Alone .....	465
33.6	Conclusions .....	469
<b>34</b>	<b>Equation of Pendulum Motion Including Rotations and its Implications to the Strong-Ground Motion</b>	
	<i>Vladimir M. Graizer</i> .....	471
34.1	Introduction .....	471
34.2	Theory of the Pendulum .....	473
34.3	Residual Displacements and what can be Done in Absence of Recorded Rotations (Tilts) .....	476
34.4	Numerical Tests of the Effects of Tilt on Computations of Displacement.....	479
34.5	Conclusions .....	482
<b>35</b>	<b>Strong Motion Rotation Sensor</b>	
	<i>Jiří Buben, Vladimir Rudajev</i> .....	487
35.1	Introduction .....	487
35.2	Experimental Setup.....	487
35.3	Experimental Records.....	489
35.4	Conclusions .....	491
<b>36</b>	<b>High-Resolution Wide-Range Tiltmeter: Observations of Earth Free Oscillations Excited by the 26 December 2004 Sumatra -Andaman Earthquake</b>	
	<i>Marek Kaczorowski</i> .....	493
36.1	Introduction .....	493
36.2	Natural Conditions in the Low Silesian Geophysical Observatory .....	494
36.3	Principle of Operation of the Long Water-Tube Tiltmeter....	495
36.4	The Hydrodynamic System of the Long Water-Tube Tiltmeter .....	498
36.5	The Optic Module of Interference Gauge of the Water Level Variations Measurements .....	498
36.6	Determination of the Function of Plumb Line Variations .....	504
36.7	Determination of tidal wave coefficients on the basis of the long water-tube measurements .....	512
36.8	Observations of anomalous plumb line variations associated with Earth free oscillations on 26 December 2004.....	513
36.9	Conclusions .....	516

**37 Fiber Optic Sensors for Seismic Monitoring**

<i>William B. Spillman Jr., Dryver R. Huston, Junru Wu</i> .....	521
37.1 Introduction .....	521
37.2 Seismic Monitoring .....	521
37.3 Sensor/Ground Coupling .....	523
37.4 Fiber Optic Sensing .....	523
37.5 Matched Filtering/Antenna Gain .....	531
37.6 Physical Simulation Results Using STM.....	538
37.7 Discussion and Summary .....	542

**PART VI ROTATIONS AND ENGINEERING SEISMOLOGY .. 547****38 Deriving Seismic Surface Rotations for Engineering Purposes**

<i>Zbigniew Zembaty</i> .....	549
38.1 Introduction and Formulation of the Problem .....	549
38.2 Spectral Decomposition of Translational Components of Seismic Ground Motion .....	552
38.3 Rocking from Body Waves Decomposition .....	553
38.4 Rocking from Surface Waves.....	559
38.5 Rocking from Spatial Field of Ground Motion .....	560
38.6 Code Proposals and Approximate Formulae .....	563
38.7 Application Example: A Slender Tower Under Horizontal- Rocking Excitations.....	564
38.8 Summary and Conclusions.....	566

**39 Effects of Torsional and Rocking Excitations on the Response of Structures**

<i>Mihailo D. Trifunac</i> .....	569
39.1 Introduction .....	569
39.2 Rotational Strong Ground Motion .....	571
39.3 Recording Rotational Strong Motion .....	572
39.4 Generation of Synthetic Rotational Motions .....	573
39.5 Response of Structures .....	576
