

Table of Contents

Preface	ix
Organizing Committee	xiii
List of Participants and Observers	xv
<i>V. Balzani, A. Credi and F. Scandola</i> Supramolecular photochemistry and photophysics. Energy-conversion and information-processing devices based on transition metal complexes	1
<i>P. D. Beer</i> Transition metal redox active ligand systems for recognising cationic and anionic guest species	33
<i>D. H. Busch</i> Ligand design for enhanced molecular organization - selectivity and specific sequencing in multiple receptor ligands, and orderly molecular entanglements	55
<i>E. C. Constable</i> Metal-ions: a self-assembly motif in supramolecular oligomers	81
<i>K. M. Miller, E. A. Deutsch, and S. R. Cooper</i> Biomedical targeting: a role for supramolecular chemistry	101
<i>L. Echegoyen, and E. Perez-Cordero</i> Redox chemistry of metal ion complexes: preparation of new materials	115
<i>G. De Santis, M. Di Casa, L. Fabbrizzi, M. Licchelli, C. Mangano, P. Pallavicini, A. Perotti, A. Poggi, D. Sacchi, and A. Taglietti</i> pH and redox switches based on metal centres	133
<i>D. E. Fenton</i> Schiff base macrocycles and metallo-biosite modelling	153
<i>B. L. Feringa, O.-J. Gelling, M. T. Rispens, and M. Lubben</i> Self-assembly of mono- and dinuclear metal complexes; oxidation catalysis and metalloenzyme models	171
<i>C. Floriani</i> Artificial porphyrins containing cyclopropane units functioning as electron shuttles	191

<i>Th. A. Kaden</i>	
Homo- and heterobinuclear metal complexes with bis-macrocyclic ligands	211
<i>A. E. Kaifer</i>	
Ferrocene as a building block for supramolecular chemistry systems	227
<i>E. Kimura, and M. Shionoya</i>	
Macrocyclic polyamine complexes beyond metalloenzyme models	245
<i>J. A. McCleverty</i>	
Towards molecular wires and switches: exploiting coordination chemistry for non-linear optics and molecular electronics	261
<i>P. Nuno Palma, J. Legall, J. A. Wampler, and J. J. G. Moura</i>	
Molecular interactions between metalloproteins involved in electron transfer processes: tetraheme cytochrome c_3 and flavodoxin. NMR and molecular modeling studies	279
<i>P. A. Gosling, R. J. M. Klein Gebbink, A. P. H. J. Schenning, M. C. Feiters, and R. J. M. Nolte</i>	
Supramolecular models of metallo-proteins	291
<i>A. Bencini, A. Bianchi, P. Paoletti, and E. Garcia España</i>	
The role of macrocyclic receptors in organization of metal centres	309
<i>D. M. Rudkevich, W. T. S. Huck, F. C. J. M. van Veggel, and D. N. Reinhoudt</i>	
Metallomacrocycles and -clefts: receptors for neutral molecules and anions	329
<i>G. Maccarrone, E. Rizzarelli, and G. Vecchio</i>	
Chiral recognition by functionalized cyclodextrin metal complexes	351
<i>J.-C. Chambron, C. O. Dietrich-Buchecker, V. Heitz, J.-F. Nierengarten, and J.-P. Sauvage</i>	
Transition metal-directed threading and knotting processes	371
<i>J. L. Sessler, A. K. Burrell, H. Furuta, G. W. Hemmi, B. L. Iverson, V. Král, D. J. Magda, T. D. Mody, K. Shreder, D. Smith, and S. J. Weghorn</i>	
Expanded porphyrins. Receptors for cationic, anionic and neutral substrates	391
<i>A. F. Williams, C. Piguet, and R. F. Carina</i>	
Following the self-assembly process in solution	409
Author Index	425
Subject Index	427
