

PULSED ELECTRIC FIELDS TECHNOLOGY FOR THE FOOD INDUSTRY

Fundamentals and Applications

Edited by

Javier Raso

University ofZaragoza Zaragoza, Spain

Volker Heinz German Institute of Food Technology Quakenbrueck, Germany

4y Springer

CONTENTS

PA	PART I: Introduction			
1.	Pulsed Electric Fields Processing of Foods: An Overview	3		
	Gustavo V Barbosa-Cdnovas and Bilge Altunakar			
	1. Introduction	.3		
	1.1. Historical Evolution and Chronological Developments in Pulsed Electric			
	Field Processing	.4		
	1.2. Present Status of Pulsed Electric Field Technology and Applications	7		
	2. Fundamental Aspects of Pulsed Electric Field Treatment	9		
	2.1. System Components	10		
	2.1.1. Power Supply	10		
	2.1.2. Treatment Chamber	11		
	2.2. Effectiveness of Pulsed Electric Field Treatment	14		
	2.2.1. Technological Factors	14		
	2.2.2. Biological Factors	16		
	2.2.3. Media Factors	17		
	2.2.4. Inactivation Kinetics and Modeling	18		
	3. Future Aspects and Economic Analysis of PEF Processing	19		
	3.1. Combination Studies	19		
	3.2. Drawbacks/Limitations.	20		
	References	21		
2.	Generation and Application of High Intensity Pulsed Electric Fields.	27		
	Markus J. Loeffler			
	1. Introduction	27		
	2. Electric Load Requirements	28		
	2.1. Specific Power Consumption	28		
	2.2. Average Power	30		
	2.3. Voltage Waveforms	32		
	2.4. Pulse Lengths and Repetition Rates	33		
	2.5. Conclusion	33		
	3. Pulsed Power Systems.	34		
	3.1. General Remarks About Switches in Pulsed Power Generators	35		
	3.2. PEF Treatment Chambers.	35		
	3.3. High-Power Sources	36		
	3.3.1. Basic Pulsed Power Circuits	37		
	3.3.2. Circuits with Transformers or Other Voltage Multipliers.	40		

Contents

	3.3.3. Pulse Forming Networks	. 45
	3.3.4. Networks with Pulse Forming Switches	50
	3.3.5. Concluding Remarks.	. 51
	3.4. Components of High Power Sources.	52
	3.4.1. High-Power Capacitors.	52
	3.4.2. Switches	54
	3.5. Low-Power Source.	. 62
	3.5.1. Basic Considerations	62
	3.5.2. Typical Devices	63
	eferences	.71
3.	undamental Aspects of Microbial Membrane Electroporation.	73
	afael Pagan and Pilar Mafias	
	Introduction.	73
	Electroporation of Biomembranes	
	Electroporation of Microorganisms of Interest in Food Preservation.	
	3.1. Electron Microscopy Examination.	
	3.2. Leakage of Intracellular Material	. 78
	3.3. Loss of Osmotic Response.	. 78
	3.4. Permeabilization to Nonpermeant Dyes.	. 79
	3.4.1. Effect of Process Parameters: Electric Field Strength, Treatment Time,	
	and Specific Energy.	. 79
	3.4.2. Effect of Type of Microorganism	81
	3.4.3. Effect of Product Characteristics	84
	3.5. Occurrence of Sublethal Injury.	
	Concluding Remarks	. 90
	eferences	91
PA	T II: Effects of Pulsed Electric Fields.	95
4	ficrapial Inactivation by Pulsed Flectric Fields	97
ч.	nacio Alvarez, Santiano Condon, and Iavier Raso	
	Introduction	97
	Critical Factors Determining Microbial Inactivation by Pulsed Electric Fields	98
	2.1 Processing Factors	99
	2.1.1. Electric Field Strength	. 99
	2.1.2. Pulse Shape	100
	2.1.3 Pulse Width	101
	214 Treatment Time	102
	215 Frequency	102
	216 Specific Energy	102
	217 Temperature	102
	2.2. Microhial Characteristics	103
	2.2. Thereof and the of Microorganism	10/
	2.2.1. Type of interoorganism.	104
	2.2.3. Culture Conditions	105
		.105

Contents

		2.3. Treatment Medium Characteristics	.105
		2.3.1. Electrical Conductivity.	.106
		2.3.2. pH.	.106
		2.3.3. Water Activity	.108
		2.3.4. Composition of the Treatment Medium	.108
	3.	Modeling Microbial Inactivation by Pulsed Electric Fields	.110
		3.1. Collecting Data for Modeling Microbial Inactivation by PEF	110
		3.1.1. Strain and Culture Conditions	111
		3.1.2. PEF Treatment	111
		313 Treatment Medium	112
		314 Recovery Conditions	113
		3.2 Primary Models for Describing Microbial Inactivation by Pulsed	.115
		Flectric Fields	113
		3.3 Secondary Models for Describing Microbial Inactivation Pulsed	.115
		Flactric Fields	117
	1	Combination Treatments	122
	+. 5	Conclusions	122
	J. Da	Conclusions	123
	ĸe		.124

	Pi	lar Mafias and Antonio Vercet	
	1	Introduction	131
	2	Effect of PEE on Enzyme Activity	131
	2.	Effect of PEE on Food Constituents	137
	5.	3.1 Proteins	138
		3.2 Eats and Emulsions	130
		3.3 Vitamine	1/2
		3.4 Diamonts	1/12
	1	Generation of New Compounds	1/13
	- 1 . 5	Quality of DEE processed Foods	143
	5.	5.1 Mill	144
		5.1. WIIK	144
		5.2. Juices	143
		5.5. Egg Products	.14/
	6	Concluding Demontra	.140
	0. D.		.149
	Re	elerences.	.149
6	E	xtraction of Intercellular Components by Pulsed Electric Fields	153
U •	Eu	ugene Vorohiev and Nikolai I. Lehovka	.100
	1	Introduction	153
	2	Theoretical Aspects of PEE Influence on The Biological Materials	154
	2.	2.1 Disintegration Index and Characteristic Damage Time	154
		2.2. Selective Concentration of the Electric Fields on Membranes	.154
		in Biological Materials	155
		2.3 Main Mechanisms of Membrane and Call Damage in External	.155
		Electric Fields	156
		2.3.1 Electronoration of Membrane	156
		2.3.1. Electroporation of Membrane Surface	157
		2.3.2. Julie Overheading of the Memoralle Sufface.	.137

Contents

2.3.3. Electroosmotic Transport Through the Membrane	
2.3.4. Distinctness of the Cell Damage.	158
2.4. PEF-Induced Structural Changes in a Cellular Tissue	
2.4.1. Electrical Conductivity of PEF-Treated Tissues	159
2.4.2. Characteristic Damage Time and Optimization Criteria	
2.4.3. PEF-Induced Secondary Effects in a Cellular Tissue.	
3. Application of PEF for Solid/liquid Expression	165
3.1. Example of a Laboratory Device for the Combined Pressing	
and PEF Treatment.	165
3.2. Mechanism of Solid/Liquid Expression from Biological Tissue	
Treated by PEF	166
3.3. Effect of PEF on the Behavior of Constant Pressure Expression from	
Food Plants	168
3.3.1. Consolidation Behavior	168
3.3.2. Solid/Liquid Expression with Intermediate PEF Treatment	171
3.4. Effect of PEF on the Behavior of Constant Rate Expression from	
Food Plants	172
3.5 Combination of PEF with a Moderate Heating	176
3.6 Pilot Studies of Solid/Liquid Expression Combined with PEF	170
4 Effect of PEE-enhancing on Diffusion of Water and Soluble Substances	177
From Tissues	182
1 Models for PEE Treatment Enhanced Diffusion	183
4.2. Influence of PEE Protocol Temperature and Ergementation of Particles	105
an the Extraction Kinetics	185
on the Extraction Kinetics.	105

5. 6. Re	Problems and Challenges
. Pu	lsed Power Systems for Application of Pulsed Electric Fields in the Food Industry
He	nnie Mastwijk
1.	Introduction
2.	Peak Power Requirements
3.	Continuous Power Requirements
4.	Power Supplies, Switches, and Treatment Devices
	4.1. DC Power Supplies
	4.2. Switches
	4.3. Electrical Properties of Treatment Devices
	4.3.1. Electrical Impedance
	4.3.2. Comparison of Cell Resistance by Calculation and Measurement
	4.4. Pulse Shapes
	4.5. Measurement Under Pulsed Conditions
~	4.6. Partial Discharges, Electrical Breakdown, and Arcing.
5.	Electrochemical Properties of Pulsed Power Systems
	5.1. Electrochemical Reactions
	5.2. Electrode Degradation by DC Oliset
	5.3. Metal Release Under Pulsed Conditions.
~	5.4. More Sources of AC Components.
6.	Process Assessment
	6.1. Energy input.
	6.2. Calorimetric Heat Output.
