

# Space Psychology and Psychiatry

by

**Nick Kanas, M.D.**

*Professor of Psychiatry,  
University of California/San Francisco,  
and Department of Veterans Affairs Medical Center,  
San Francisco, California, U.S.A.*

**Dietrich Manzey, Ph.D.**

*Professor of Work, Engineering,  
and Organizational Psychology,  
Department of Psychology and Ergonomics,  
Berlin University of Technology, Berlin, Germany*

Published jointly by  
**Microcosm Press**  
El Segundo, California

**Springer**

# Contents

(Underlined sections emphasize empirical work conducted in space)

Preface (1st Edition)	xi
Preface (2nd Edition)	xv
1. Introduction	1
1.1. Humans in space	1
1.2. Stressors and stress in space	1
1.3. Sources of information	3
1.3.1. Anecdotal reports	3
1.3.2. Space analog and simulation studies	3
1.3.2.1. Settings	3
1.3.2.2. Relevance to actual space missions	4
1.3.3. Research in space	5
1.4. Basic assumptions	6
1.4.1. Human performance	6
1.4.2. Crew heterogeneity	6
1.4.3. Cultural differences	7
1.4.4. Time effects	7
1.4.5. Crew-ground relationship	8
1.4.6. Psychological countermeasures	8
1.5. Summary	9
References	10
2. Basic Issues Of Human Adaptation to Space Flight	15
2.1. Space as an extreme environment	15
2.2. Issues of physiological adaptation	16
2.2.1. Cardiovascular system	17
2.2.2. Vestibular and sensory-motor system	19
2.2.3. Musculo-skeletal system	23
2.2.4. Physiological deconditioning and countermeasures	24
2.3. Sleep and circadian rhythms	27
2.3.1. <u>Empirical findings from space: phenomenology of sleep disturbances</u>	27
2.3.2. <u>Empirical findings from space: sleep disturbances and circadian rhythms</u>	29
2.3.3. Operational significance	31

2.4. Psychological adaptation to long-duration space flight:	
general characteristics	34
2.4.1. Stages of adaptation over time	34
2.4.2. Empirical findings from ground research: stages of adaptation in analog environments and isolation studies	35
2.4.3. <u>Empirical findings from space: stages of psychological adaptation during space missions</u>	36
2.5. Summary	39
References	40
3. Human Performance	49
3.1. Basic issues	49
3.2. Possible origins of cognitive performance decrements in space	50
3.2.1. Effects of microgravity on specific brain mechanisms	50
3.2.2. Effects of stress on mental performance	52
3.3. <u>Empirical findings from space: cognitive neuroscience research</u>	55
3.3.1. Spatial orientation	55
3.3.2. Spatial perception and representation	58
3.3.3. Mental rotation and object recognition	59
3.3.4. Mass discrimination	60
3.3.5. Aimed voluntary movements	61
3.4. <u>Empirical findings from space: human performance monitoring</u>	63
3.4.1. Results of performance monitoring during short-duration space flight	64
3.4.2. Results of performance monitoring during long-duration space missions	71
3.4.3. Impairments of tracking and dual-task performance in space: effects of microgravity, stress, or both?	74
3.5. Complex cognitive and perceptual-motor skills	78
3.5.1. Ground-based studies	78
3.5.2. <u>Empirical findings from space: effects of stressors on complex cognitive and perceptual-motor skills</u>	79
3.6. Summary	80
References	81
4. Human Interactions	89
4.1. Interpersonal issues	89
4.2. Crew heterogeneity	90
4.2.1. Gender	91
4.2.2. Cultural differences	93
4.2.3. Career motivation and experiences	95
4.2.4. Personality	96
4.2.5. Problems related to crew heterogeneity	97

4.3. Crew cohesion	98
4.3.1. Time effects and mission stage	98
4.3.2. Problems related to changes in cohesion	99
4.4. Language and dialect variations	100
4.4.1. Native language versus space terminology	100
4.4.2. Problems related to language and dialect variations	101
4.5. Crew size	102
4.5.1. The impact of size in small groups	102
4.5.2. Problems related to crew size	102
4.6. Leadership roles	103
4.6.1. Task versus supportive roles	103
4.6.2. Problems related to leadership roles	104
4.7. Crew-ground interactions	105
4.7.1. Ingroup versus outgroup issues	105
4.7.2. Displacement	105
4.7.3. Problems related to crew-ground interactions	106
4.8. <u>Empirical findings from space: ISS operations challenges as seen by junior and senior mission control personnel</u>	106
4.8.1. Procedures	107
4.8.2. Results	107
4.8.3. Conclusions	107
4.9. <u>Empirical findings from space: human interactions during the Shuttle/Mir program</u>	108
4.9.1. Procedures	108
4.9.2. Results	110
4.10. <u>Empirical findings from space: human interactions during the International Space Station (ISS) program</u>	113
4.10.1. Procedures	113
4.10.2. Results	115
4.10.3. Culture and Language Questionnaire findings	118
4.11. <u>Empirical findings from space: conclusions from the Shuttle/Mir and International Space Station human interactions studies</u>	119
4.11.1. Time effects	119
4.11.2. Displacement	120
4.11.3. National and organizational culture	121
4.11.4. Cultural and language experiences and attitudes	122
4.11.5. Leadership roles	122
4.11.6. Critical incidents	123
4.11.7. Implications for future space missions	123
4.12. <u>Empirical findings from space: cultural challenges facing ISS personnel</u>	124
4.12.1. Procedures	124
4.12.2. Results	124
4.12.3. Conclusions	125
4.13. Summary	125
References	127

5. Psychiatric Issues	135
5.1. Behavioral health and salutogenesis	135
5.2. <u>Empirical findings from space: positive psychological aspects of space flight</u>	136
5.2.1 Procedures	136
5.2.2 Results	136
5.2.3 Conclusions	138
5.3. Psychiatric problems in space	139
5.3.1. Adjustment disorders	140
5.3.2. Somatoform disorders	140
5.3.3. Mood and thought disorders	141
5.3.4. Post-mission effects: personality changes and marital problems	144
5.4. Asthenia	144
5.4.1. A common space syndrome?	144
5.4.1.1. Cultural issues	144
5.4.1.2. Russian views of asthenia in space	146
5.4.2. <u>Empirical findings from space: asthenia and the Shuttle/Mir program</u>	147
5.4.2.1. Procedures	147
5.4.2.2. Results	148
5.4.2.3. Conclusions	148
5.4.3. <u>Empirical findings from space: cultural differences in patterns of mood states on-orbit</u>	149
5.5. Treatment considerations	150
5.5.1. Counseling and psychotherapy	150
5.5.2. Psychoactive medications	151
5.6. Psychiatric research in space	153
5.7. Summary	154
References	154
6. Psychological Countermeasures	161
6.1. General aspects	161
6.2. Habitability factors	162
6.3. Work design issues	167
6.4. Selection and crew composition	169
6.4.1. General issues	169
6.4.2. Select-out: avoiding psychopathology	170
6.4.3. Select-in: the "right stuff"	171
6.4.4. Crew composition: the problem of interpersonal compatibility	175
6.5. Training	179
6.5.1. Who should be trained?	179
6.5.2. Towards a competency model for astronauts	180
6.5.3. Kinds of training	185
6.5.3.1. Briefings, lectures, and workshops	185
6.5.3.2. Field exercises	186

6.5.3.3. Crew-oriented sensitivity training and team-building	186
6.6. Crew monitoring	188
6.6.1. Remote monitoring from Earth	189
6.6.2. <u>Empirical findings from space: monitoring stress through voice analysis</u>	190
6.6.3. On-board monitoring	191
6.7. In-flight support	193
6.7.1. Supportive measures for preventing feelings of monotony, boredom, and isolation	194
6.7.2. Maintaining contact with family and friends	195
6.7.3. Private psychological conferences	196
6.7.4. Support of families on Earth	197
6.8. Post-flight readjustment support	197
6.8.1. Individual issues	198
6.8.2. Family issues	198
6.9. Summary	199
References	200
7. Future Challenges	211
7.1. Space tourism	211
7.2. Going beyond the Earth's orbit	213
7.3. Future human missions to the Moon and Mars	214
7.3.1. Missions to the Moon and the establishment of a lunar base	214
7.3.2. Exploratory missions to Mars	215
7.4. Applicability of current psychological knowledge to space missions beyond the Earth's orbit	216
7.5. <u>Empirical findings from space: cosmonaut survey regarding a mission to Mars</u>	219
7.5.1. Goals and Procedures	219
7.5.2. Results	219
7.5.3. Conclusions	220
7.6. Human missions to Mars: new psychological challenges	220
7.6.1. Individual adaptation and human performance	220
7.6.2. Interpersonal issues	223
7.6.3. Psychiatric issues	225
7.6.4. Psychological countermeasures	226
7.6.5. The Earth-out-of-view phenomenon	228
7.7. Research directions	229
7.8. Summary	231
References	232
