

1

Exploratory and explanatory statistical analysis of spatial data

2 3
CORNELIS P. A. BARTELS and RONALD H. KETELLAPPER, editors
University of Groningen

Martinus Nijhoff Publishing
Boston/The Hague/London 1979

Contents

PREFACE	V
CONTENTS	VII
LIST OF CONTRIBUTORS	XI
Part 1: Introduction	1
1. GENERAL INTRODUCTION	3
CORNELIS P. A. BARTELS AND RONALD H. KETELLAPPER	
2. OPERATIONAL STATISTICAL METHODS FOR ANALYSING SPATIAL DATA	5
CORNELIS P. A. BARTELS	
2.1. Introduction	5
2.2. The structure of spatial data	6
2.3. Methods based on simple correlations between cross-regional data	7
2.4. Time-series analysis applied to spatial data	13
2.5. Adaptations of time-series analysis to the spatial context	20
2.6. Single equation explanatory models	28
2.7. Simultaneous equation models with spatial data	40
2.8. Some remaining topics	42
2.9. Final remarks	45
References	45

Part 2: Exploratory statistical analysis	51
3. THE ANALYSIS OF GEOGRAPHICAL MAPS	53
BRIAN D. RIPLEY	
3.1. Introduction	53
3.2. Methods of analysis	54
3.3. Models	55
3.4. Tests for randomness	60
3.5. Examples	65
3.6. Conclusions	67
References	71
4. CONSTRUCTION OF INTERREGIONAL INPUT- OUTPUT TABLES BY EFFICIENT INFORMATION ADDING	73
FOLKE SNICKARS	
4.1. Introduction	73
4.2. Regional and national accounts	75
4.3. Generation of survey-based transaction tables	79
4.4. Results of the statistical estimations	91
4.5. Results of the minimum information estimations	105
4.6. Some conclusions	110
References	111
5. FURTHER EVIDENCE ON ALTERNATIVE PRO- CEDURES FOR TESTING OF SPATIAL AUTO- CORRELATION AMONG REGRESSION DIS- TURBANCES	113
ANDRIES S. BRANDSMA AND RONALD H. KETELLAPPER	
5.1. Introduction	113
5.2. Formulation of the statistical decision problem	115
5.3. Moran's test statistic	116
5.4. Moments of the Moran statistic using OLS and LUS estimators	118
5.5. The likelihood ratio test	122
5.6. Simulation study of the Moran and likelihood ratio tests	125
5.7. Results	126

CONTENTS	IX
5.8. Conclusions	132
Appendix	134
References	135
Part 3: Explanatory statistical analysis	137
6. MULTIVARIATE MODELS OF DEPENDENT SPATIAL DATA	139
BERND STREITBERG	
6.1. Introduction	139
6.2. Decomposable covariance structures	141
6.3. Linear models	157
6.4. Principal components	172
6.5. Conclusion	173
References	176
7. BAYESIAN ANALYSIS OF THE LINEAR MODEL WITH SPATIAL DEPENDENCE	179
LESLIE W. HEPPLER	
7.1. Introduction	179
7.2. The nature of Bayesian inference	180
7.3. Linear regression model with spatially auto-correlated disturbances	185
7.4. An empirical application	193
7.5. Concluding remarks	197
References	198
8. ALTERNATIVE METHODS OF ESTIMATING SPATIAL INTERACTION MODELS AND THEIR PERFORMANCE IN SHORT-TERM FORECASTING	201
STAN OPENSHAW	
8.1. Introduction	201
8.2. Description of data and models	203
8.3. Parameter estimation and model calibration in terms of 1966 and 1971 data	206
8.4. On the accuracy of short-term forecasts made by spatial interaction models	212

8.5.	An evaluation of some alternatives designed to improve model performance	216
8.6.	Conclusions	223
	References	224
9.	TWO ESTIMATION METHODS FOR SINGLY CONSTRAINED SPATIAL DISTRIBUTION MODELS	227
	JAN VAN EST AND JAN VAN SETTEN	
9.1.	Introduction	227
9.2.	The calibration of a model	228
9.3.	The maximum likelihood method	230
9.4.	The least-squares method for the singly constrained model	234
9.5.	Numerical results	237
9.6.	Conclusions	240
	References	241
	Part 4: The introduction of stochastics in regional control	243
10.	STOCHASTIC CONTROL OF REGIONAL ECONOMIES	245
	ROBERT J. BENNETT AND K.C. TAN	
10.1.	Introduction	245
10.2.	Mathematical representation of regional systems	246
10.3.	Optimal control models of regional systems	250
10.4.	Interaction of optimal control of regional economies with national governments	255
10.5.	Problems in applying optimal control to regional systems	264
10.6.	Conclusion	266
	References	267
