

Kurt Marti

Stochastic Optimization Methods

Second edition

 Springer

Contents

Part I Basic Stochastic Optimization Methods

1	Decision/Control Under Stochastic Uncertainty	3
1.1	Introduction	3
1.2	Deterministic Substitute Problems: Basic Formulation	5
1.2.1	Minimum or Bounded Expected Costs	6
1.2.2	Minimum or Bounded Maximum Costs (Worst Case)	8
2	Deterministic Substitute Problems in Optimal Decision Under Stochastic Uncertainty	9
2.1	Optimum Design Problems with Random Parameters	9
2.1.1	Deterministic Substitute Problems in Optimal Design	13
2.1.2	Deterministic Substitute Problems in Quality Engineering	16
2.2	Basic Properties of Substitute Problems	18
2.3	Approximations of Deterministic Substitute Problems in Optimal Design	19
2.3.1	Approximation of the Loss Function	20
2.3.2	Regression Techniques, Model Fitting, RSM	22
2.3.3	Taylor Expansion Methods	26
2.4	Applications to Problems in Quality Engineering	29
2.5	Approximation of Probabilities: Probability Inequalities	30
2.5.1	Bonferroni-Type Inequalities	31
2.5.2	Tschebyscheff-Type Inequalities	32
2.5.3	First Order Reliability Methods (FORM)	37

Part II Differentiation Methods

3	Differentiation Methods for Probability and Risk Functions	43
3.1	Introduction	43
3.2	Transformation Method: Differentiation by Using an Integral Transformation	46
3.2.1	Representation of the Derivatives by Surface Integrals	51
3.3	The Differentiation of Structural Reliabilities	54
3.4	Extensions	57
3.4.1	More General Response (State) Functions	57
3.5	Computation of Probabilities and its Derivatives by Asymptotic Expansions of Integral of Laplace Type	62
3.5.1	Computation of Probabilities of Structural Failure and Their Derivatives	62
3.5.2	Numerical Computation of Derivatives of the Probability Functions Arising in Chance Constrained Programming	66
3.6	Integral Representations of the Probability Function $P(x)$ and its Derivatives	72
3.7	Orthogonal Function Series Expansions I: Expansions in Hermite Functions, Case $m = 1$	75
3.7.1	Integrals over the Basis Functions and the Coefficients of the Orthogonal Series	79
3.7.2	Estimation/Approximation of $P(x)$ and its Derivatives	82
3.7.3	The Integrated Square Error (ISE) of Deterministic Approximations	88
3.8	Orthogonal Function Series Expansions II: Expansions in Hermite Functions, Case $m > 1$	89
3.9	Orthogonal Function Series Expansions III: Expansions in Trigonometric, Legendre and Laguerre Series	91
3.9.1	Expansions in Trigonometric and Legendre Series	92
3.9.2	Expansions in Laguerre Series	92

Part III Deterministic Descent Directions

4	Deterministic Descent Directions and Efficient Points	95
4.1	Convex Approximation	95
4.1.1	Approximative Convex Optimization Problem	99
4.2	Computation of Descent Directions in Case of Normal Distributions	101
4.2.1	Descent Directions of Convex Programs	105
4.2.2	Solution of the Auxiliary Programs	108
4.3	Efficient Solutions (Points)	113
4.3.1	Necessary Optimality Conditions Without Gradients	116

4.3.2 Existence of Feasible Descent Directions
in Non-Efficient Solutions of (4.9a), (4.9b) 117

4.4 Descent Directions in Case of Elliptically Contoured
Distributions 118

4.5 Construction of Descent Directions by Using Quadratic
Approximations of the Loss Function 121

Part IV Semi-Stochastic Approximation Methods

5 RSM-Based Stochastic Gradient Procedures 129

5.1 Introduction 129

5.2 Gradient Estimation Using the Response Surface
Methodology (RSM) 131

5.2.1 The Two Phases of RSM 134

5.2.2 The Mean Square Error of the Gradient Estimator 138

5.3 Estimation of the Mean Square (Mean Functional) Error 142

5.3.1 The Argument Case 143

5.3.2 The Criterial Case 147

5.4 Convergence Behavior of Hybrid Stochastic Approximation
Methods 147

5.4.1 Asymptotically Correct Response Surface Model 148

5.4.2 Biased Response Surface Model 150

5.5 Convergence Rates of Hybrid Stochastic Approximation
Procedures 153

5.5.1 Fixed Rate of Stochastic and Deterministic Steps 158

5.5.2 Lower Bounds for the Mean Square Error 169

5.5.3 Decreasing Rate of Stochastic Steps 173

**6 Stochastic Approximation Methods with Changing
Error Variances** 177

6.1 Introduction 177

6.2 Solution of Optimality Conditions 178

6.3 General Assumptions and Notations 179

6.3.1 Interpretation of the Assumptions 181

6.3.2 Notations and Abbreviations in this Chapter 182

6.4 Preliminary Results 183

6.4.1 Estimation of the Quadratic Error 183

6.4.2 Consideration of the Weighted Error Sequence 185

6.4.3 Further Preliminary Results 188

6.5 General Convergence Results 190

6.5.1 Convergence with Probability One 190

6.5.2 Convergence in the Mean 192

6.5.3 Convergence in Distribution 195

6.6 Realization of Search Directions Y_n 204

6.6.1 Estimation of G^* 209

6.6.2	Update of the Jacobian	210
6.6.3	Estimation of Error Variances	216
6.7	Realization of Adaptive Step Sizes	220
6.7.1	Optimal Matrix Step Sizes	221
6.7.2	Adaptive Scalar Step Size	227
6.8	A Special Class of Adaptive Scalar Step Sizes	236
6.8.1	Convergence Properties	237
6.8.2	Examples for the Function $Q_n(r)$	241
6.8.3	Optimal Sequence (w_n)	247
6.8.4	Sequence (K_n)	247

Part V Reliability Analysis of Structures/Systems

7	Computation of Probabilities of Survival/Failure by Means of Piecewise Linearization of the State Function	253
7.1	Introduction	253
7.2	The State Function s^*	256
7.2.1	Characterization of Safe States	258
7.3	Probability of Safety/Survival	259
7.4	Approximation I of p_s, p_f : FORM	262
7.4.1	The Origin of \mathbb{R}^ν Lies in the Transformed Safe Domain	262
7.4.2	The Origin of \mathbb{R}^ν Lies in the Transformed Failure Domain	266
7.4.3	The Origin of \mathbb{R}^ν Lies on the Limit State Surface	268
7.4.4	Approximation of Reliability Constraints	269
7.5	Approximation II of p_s, p_f : Polyhedral Approximation of the Safe/Unsafe Domain	270
7.5.1	Polyhedral Approximation	273
7.6	Computation of the Boundary Points	279
7.6.1	State Function s^* Represented by Problem A	280
7.6.2	State Function s^* Represented by Problem B	280
7.7	Computation of the Approximate Probability Functions	282
7.7.1	Probability Inequalities	282
7.7.2	Discretization Methods	289
7.7.3	Convergent Sequences of Discrete Distributions	293

Part VI Appendix

A	Sequences, Series and Products	301
A.1	Mean Value Theorems for Deterministic Sequences	301
A.2	Iterative Solution of a Lyapunov Matrix Equation	309

B Convergence Theorems for Stochastic Sequences 313

 B.1 A Convergence Result of Robbins–Siegmund 313

 B.1.1 Consequences 313

 B.2 Convergence in the Mean 316

 B.3 The Strong Law of Large Numbers for Dependent Matrix
 Sequences 318

 B.4 A Central Limit Theorem for Dependent Vector Sequences. . . 319

C Tools from Matrix Calculus 321

 C.1 Miscellaneous 321

 C.2 The v. Mises-Procedure in Case of Errors 322

References 327
