COMPUTATIONAL CHEMISTRY

Intwduction to the Theory and Applications of Molecular and Quantum Mechanics

Errol Lewars
Chemistry Department
Trent University
Peterborough, Ontario
Canada

KLUWER ACADEMIC PUBLISHERS
Boston / Dordrecht / London

CONTENTS

Preface **ix**

1 An Outline of What Computational Chemistry is All About 1
1.1 What you can do with computational chemistry . . . 1
1.2 The tools of computational chemistry . . . 2
1.3 Putting it all together . . . 3
1.4 The philosophy of computational chemistry . . . 4
1.5 Summary of chapter 1 . . . 4
References . . . 5
Easier questions . . . 6
Härder questions . . . 6

2 The Concept of the Potential Energy Surface 9
2.1 Perspective . . . 9
2.2 Stationary points . . . 13
2.3 The Born-Oppenheimer approximation . . . 20
2.4 Geometry optimization . . . 22
2.5 Stationary points and normal-mode vibrations: ZPE . . . 29
2.6 Symmetry . . . 33
2.7 Summary of chapter 2 . . . 38
References . . . 39
Easier questions . . . 40
Härder questions . . . 40

3 Molecular Mechanics 43
3.1 Perspective . . . 43
3.2 The basic principles of MM . . . 45
3.3 Examples of the use of MM . . . 57
3.4 Geometries calculated by MM . . . 64
3.5 Frequencies calculated by MM . . . 68
3.6 Strengths and weaknesses of MM . . . 72
3.7 Summary of chapter 3 . . . 75
References . . . 75
Easier questions . . . 78
Härder questions . . . 78

4 Introduction to Quantum Mechanics in Computational Chemistry 81
4.1 Perspective . . . 81
4.2 The development of quantum mechanics (The Schrödinger equation) . . . 82
4.3 The application of the Schrödinger equation to chemistry by Hückel . . . 95

4.4 The Extended Hückel Method 140
4.5 Summary of chapter 4 151
References 153
4.6 Easier questions 157
4.7 Härder questions 157

5 *Ab initio* calculations 159
5.1 Perspective 159
5.2 The basic principles of the *ab initio* method 160
5.3 Basis sets 210
5.4 Post-HF calculations: electron correlation 231
5.5 Applications of the *ab initio* method 253
5.6 Strengths and weaknesses of *ab initio* calculations 322
5.7 Summary of chapter 5 323
References 324
Easier questions 336
Härder questions 336

6 Semiempirical Calculations 339
6.1 Perspective 339
6.2 The basic principles of SCF SE methods 340
6.3 Applications of SE methods 355
6.4 Strengths and weaknesses of SE methods 377
6.5 Summary of chapter 6 378
References 378
Easier questions 382
Härder questions 382

7 Density Functional Calculations 385
7.1 Perspective 385
7.2 The basic principles of density functional theory 387
7.3 Applications of density functional theory 399
7.4 Strengths and weaknesses of DFT 436
7.5 Summary of chapter 7 437
References 438
Easier questions 444
Härder questions 445

8 : Literature, Software, Books and Websites 447
8.1 From the literature 447
8.2 To the literature 455
8.3 Software and hardware 457
References 460

Index **463**
