OR/MS and Environmental Decision Making under Uncertainty.... 1
Jerzy A. Filar and Alain B. Haurie
1.1 Introduction 1
1.2 New challenges and pitfalls to OR/MS applications to EDM 4
1.2.1 From natural resource management to EDM 4
1.2.2 Cosi-effectiveness vs cost-benefit analysis 5
1.2.3 Activity analysis models and uncertainty 6
1.2.4 Meta-modeling: interactions between physical, bio-chemical, economic and technological systems 7
1.2.5 Choice of time horizon & performance criterion: the ethics of uncertainty in EDM 15
1.3 Sources of uncertainty in environmental modeling 15
1.3.1 Classification of uncertainty sources in models 15
1.3.2 Error propagation in an integrated climate model 17
1.4 Stochastic reasoning for some fundamental issues 20
1.4.1 The uncertain discounting issue 21
1.4.2 The Weighted Markov Decision Processes 30
1.4.3 Consequences for GCC policy evaluation 32
1.5 Techniques and methods to deal with uncertainty in EDM 33
1.5.1 Statistical analysis 34
1.5.2 Extreme event analysis 36
1.5.3 Reliability theory 38
1.5.4 Simulations: Synthetic Data and Validation 39
1.5.5 Stochastic optimization models 42
1.6 Concluding remarks 42
References 44

2 **Modeling Uncertainty in a Large scale integrated Energy-Climate Model** 51
Maryse Labriel, Richard Loulou and Amit Kanudia
2.1 Introduction 52
2.2 Uncertainty in Energy-Climate Studies 53
2.3 Modeling Uncertainty in a Large Scale Integrated Energy-Climate Model 55
2.3.1 The TIMES Integrated Assessment Model (ETSAP-TIAM) 55
2.3.2 Using the Model 57
2.3.3 The Computation of Hedging Strategies 58
2.4 A Treated Example: Hedging Strategy and Perfect Forecast Strategies for a 2.5°C Target on Global Temperature Change 60
2.4.1 Hedging and Perfect Forecast Strategies 60
2.4.2 Another Interpretation of the Perfect Forecast Strategies . 61
2.4.3 Cost Analysis as ,a Proxy for the Target's Attainability ... 62
2.4.4 Global Emissions and Climate Results 63
2.4.5 Robust (Hedging) Actions 65
2.4.6 Super-Hedging Actions 69
2.5 Sensitivity Analyses 69
2.6 Alternate Criteria for Stochastic Programming 70
2.6.1 Expected Cost Criterion with Risk Aversion 71
2.6.2 The Savage Criterion (Minimax Regret) 72
2.6.3 Application of Minimax Regret in Large Scale Linear Programs 73
2.7 Conclusion 75
References 76

3 **Robust Optimization for Environmental and Energy Planning** 79
F. Babonneau, J.-P. Vial, and R. Apparigliato
3.1 Robust Optimization in short 79
3.2 An example in power supply under pollution constraint 81
3.2.1 Deterministic formulation 82
3.2.2 Uncertainties in the power supply model 85
3.2.3 Validation process 86
3.2.4 Evaluation of the deterministic solution in the uncertain environment 87
3.3 Case study: robust solution to a problem with uncertain pollutant transfer coefficients 88
3.4 Robust Optimization for the static problem: theoretical developments 91
3.4.1 Robust equivalent: the case of the 2-norm 93
3.4.2 Robust equivalent: the case of the £\ and (.„ norms 94
3.4.3 Robust equivalent: bounded polyhedral uncertainty set .. 97
3.4.4 Uncertainties in the objective function 98

3.4.5 Two-sided inequality constraints . . . 99
3.4.6 Equality constraints . . . 100
3.5 Dynamic problem with recourse . . . 101
3.5.1 Linear decision rules . . . 101
3.5.2 Problems with uncertain recourse parameters . . . 102
3.5.3 Problems with fixed recourse . . . 102
3.6 Case study: uncertain demand with fixed recourse . . . 103
3.6.1 LDR and relaxed demand constraints . . . 103
3.6.2 LDR and exact demand constraints . . . 106
3.6.3 Stochastic programming . . . 107
3.7 Case study: uncertainty in demands and pollutant transfers . . . 109
3.7.1 A fully robust optimization approach . . . 109
3.7.2 A hybrid approach: stochastic programming with robust constraints . . . 111
3.8 Probability of constraint satisfaction . . . 112
3.8.1 Bounds on the probability of constraint satisfaction . . . 112
3.8.2 Uncertainty set versus constraint satisfaction . . . 115
3.9 Extension: Globalized robust optimization . . . 117
3.9.1 The concept of globalized robust optimization . . . 118
3.9.2 Globalized robustness with linear programming . . . 119
3.9.3 Case study: Globalized robustness with uncertain demands . . . 122
3.10 Conclusion . . . 122
References . . . 124

Coping with Climate Risks in Indonesian Rice Agriculture: A Policy Perspective . . . 127
Rosamond L. Naylor and Michael D. Mastrandrea
4.1 Introduction . . . 127
4.2 Climate Risks in Agriculture . . . 129
4.2.1 Climate Variability and ENSO . . . 129
4.2.2 Global Climate Change . . . 131
4.3 Risk Assessment . . . 132
4.4 Indonesian Rice Agriculture . . . 135
4.5 Projecting the Impact of El Nino Events on Rice Production . . . 139
4.6 Assessing the Probability of an El Nino Event . . . 142
4.7 Implications for Long-Run Climate Forecasting . . . 145
4.8 Conclusions and Implications for Other Regions and Systems . . . 147
References . . . 151

A Primer on Weather Derivatives . . . 155
Pauline Barrieu and Olivier Scaillet
5.1 Introduction and definition . . . 155
5.1.1 What is weather risk? . . . 155
5.1.2 Weather derivatives . . . 156
5.2 The weather derivatives market . . . 158

5.2M Organized market: the Chicago Mercantile Exchange (CME) . . . 159
5.2.2 European situation . . . 161
5.2.3 Electronic trading platforms . . . 162
5.3 The World Bank program based upon weather derivatives . . . 162
5.3.1 General presentation . . . 163
5.3.2 From theory to practice: a pilot project for agricultural risk transfer in India . . . 163
5.3.3 Current and future projects . . . 166
5.4 Specific issues related to weather derivatives . . . 167
5.4.1 Basis risk . . . 167
5.4.2 Pricing issues . . . 168
5.4.3 Design issues . . . 171
References . . . 174

6 Optimal Control Models and Elicitation of Attitudes towards Climate Damages . . . 177
Philippe Ambrosi, Jean-Charles Hourcade, Stephane Hallegatte, Franck Lecocq, Patrice Dumas, Minh Ha Duong
6.1 Foreword . . . 178
6.2 Introduction . . . 180
6.3 Metrics for assessing benefits of climate policies . . . 181
6.4 Lessons from a stochastic cost-effectiveness analysis: *RESPONSES* . . . 183
6.5 The pure preference for the current climate regime: *RESPONSES*[3] 187
6.6 Key issues with the strong form of cost-benefit analysis . . . 191
6.6.1 Interplay between the discount rate and the shape of the damage function . . . 192
6.6.2 Importance of parameters other than the shape of damage curve . . . 193
6.6.3 Interplay between the shape of damage curve and climate sensitivity . . . 195
6.7 Conclusions . . . 200
References . . . 207

7 A Stochastic Control/Game Approach to the Optimal Timing of Climate Policies . . . 211
O. Bahn, A. Haurie and R. Malhame
7.1 Introduction . . . 211
7.2 A stochastic control model for the optimal timing of climate policies . . . 213
7.2.1 Variables . . . 213
7.2.2 Economic dynamics . . . 214
7.2.3 Technological breakthrough dynamics . . . 216
7.2.4 GHG concentration dynamics . . . 217
7.2.5 Climate change damages . . . 218

7.2.6 Stochastic control model . . . 218
7.2.7 Single-jump piecewise deterministic control model . . . 219
7.2.8 Dynamic programming . . . 219
7.2.9 Numerical method . . . 221
7.2.10 Numerical results . . . 223
7.3 A stochastic game model . . . 225
7.3.1 International dimension of climate policies . . . 225
7.3.2 Variables . . . 226
7.3.3 Equations . . . 226
7.3.4 Uncertain technological breakthrough . . . 227
7.3.5 Controlled stochastic game . . . 228
7.3.6 Game in normal form . . . 229
7.3.7 Dynamic programming . . . 230
7.3.8 Solving the deterministic equivalent dynamic games 231
7.3.9 Discrete time formulation . . . 232
7.3.10 Numerical results . . . 232
7.4 Toward a model of learning about climate sensitivity . . . 234
7.5 Conclusion . . . 234
References . . . 235

8 Precautionary Effect and Variations of the Value of Information . . . 237
M. De Lara and L. Gilotte
8.1 Introduction . . . 237
8.2' Effect of learning and second-period value of information . . . 239
8.2.1 Second-period value of the information . . . 240
8.2.2 An example with quadratic costs . . . 241
8.2.3 Comparison of initial and second-period values of information . . . 242
8.3 Value of information as a key to the literature . . . 243
8.3.1 Epstein (1980) . . . 243
8.3.2 Freixas and Laffont (1984) . . . 244
8.3.3 ' All or nothing ' decision set . . . 245
8.3.4 Ulph and Ulph (1997) . . . 245
8.4 Numerical application to a climate change model . . . 246
8.5 Conclusion . . . 246
8.6 Appendix . . . 248
8.6.1 General results on comparison of arg max . . . 248
8.6.2 Appendix: extension of Ulph and Ulph's result . . . 249
References . . . 249

9 Comparative Forecasting and a Test for Persistence in the El Nino Southern Oscillation . . . 253
Belinda A. Chiera, Jerzy A. Filar, Daniel S. Zachary, Adrian H. Gordon
9.1 Introduction . . . 253
9.2 Analysis of the SOI data series . . . 255
9.2.1 The SOI data series . . . 255

9.3 The Bayesian Binary Tree Model . . . 258
9.4 Forecasting SOI from the BBT Model . . . 261
9.5 A benchmark forecast using a Taylor Series . . . 264
9.6 Comparing TSF and BBT . . . 265
9.7 Discussion . . . 266
References . . . 269

10 Generation of Synthetic Sequences of Electricity Demand with Applications . . . 273
J.W. Boland
10.1 Introduction . . . 273
10.2 Half hourly electricity demand model . . . 277
10.2.1 Data structure . . . 279
10.2.2 Yearly cycles . . . 279
10.2.3 Weekly seasonality . . . 280
10.2.4 Intra-day cycles . . . 282
10.2.5 Relationship between demand and current temperature . . 284
10.2.6 Analysis of *en*, per period during summer . . . 286
10.3 The generation process . . . 293
10.3.1 Final error distribution . . . 293
10.3.2 Steps of the synthetic generation process . . . 294
10.4 Daily mean temperature model . . . 297
10.4.1 Validation of the model . . . 299
10.5 Verification of the generation algorithm for half hourly demand . . 300
10.6 Applications . . . 302
10.6.1 Yearly peak demand . . . 304
10.6.2 Optimisation of orientation of photovoltaic cells to match electricity demand . . . 305
10.7 Conclusion . . . 309
References . . . 311

11 Models for Improving Management of Biosolids Odors . . . 313
Steven A. Gabriel, Sirapong Vilalai, Prawat Sahakij, Mark Ramirez , Chris Peot
11.1 Introduction, Overview, and Literature Review . . . 313
1 1.2 Summary of Statistical Modeling Work . . . 314
11.2.1 Statistical modeling to forecast odor levels of biosolids applied to reuse sites . . . 315
11.2.2 Prediction of Dimethyl Disulfide levels from biosolids using statistical modeling . . . 317
11.2.3 A combined subjective and objective odor model . . . 318
11.2.4 Odor probability distribution and simulation analysis . . . 319
11.3 Summary of Multiobjective Optimization Work . . . 322
11.3.1 Mode 1: $F^{\wedge c}$ exogenously determined . . . 323
11.3.2 Mode 2: $F^{\wedge c}$ endogenously determined . . . 327
11.3.3 Adding stochasticity to the optimization models . . . 327

11.4 Summary and Future Directions 329
