## Preface

## 1 Introduction

## 2 Boltzmann Equation

- 2.1 Velocity distribution function and macroscopic variables . . . . .
- 2.2 Boltzmann equation . . . . .
- 2.3 Conservation equations . . . . .
- 2.4 Maxwell distribution (Equilibrium distribution) . . . . .
- 2.5 Mean free path . . . . .
- 2.6 Boundary condition . . . . .
  - 2.6.1 Simple boundary . . . . .
  - 2.6.2 Interface . . . . .
- 2.7 H theorem . . . . .
- 2.8 Model equation . . . . .
- 2.9 Nondimensional expressions I . . . . .
- 2.10 Nondimensional expressions II . . . . .
- 2.11 Linearized Boltzmann equation . . . . .
- 2.12 Boltzmann equation in the cylindrical and spherical coordinate systems . . . . .

## 3 Linear Theory – Small Reynolds Numbers

- 3.1 Problem . . . . .
- 3.2 Grad–Hilbert solution and fluid-dynamic-type equations . . . . .
- 3.3 Stress tensor and heat-flow vector of the Grad–Hilbert solution . . . . .
- 3.4 Analysis of the Knudsen layer . . . . .
- 3.5 Slip condition and Knudsen-layer correction . . . . .
  - 3.5.1 On a simple solid boundary . . . . .
  - 3.5.2 On an interface of a gas and its condensed phase with evaporation or condensation . . . . .
- 3.6 Determination of macroscopic variables . . . . .
- 3.7 Discontinuity of the velocity distribution function and S layer . . . . .
- 3.8 Force and mass and energy transfers on a closed body . . . . .
- 3.9 Viscosity and thermal conductivity . . . . .

3.10	Summary of the asymptotic theory . . . . .	60
3.11	Applications . . . . .	60
3.11.1	Thermal creep flow and thermal transpiration . . . . .	60
3.11.2	Thermal-stress slip flow . . . . .	63
3.11.3	Nonlinear thermal-stress flow . . . . .	64
3.11.4	Thermal edge flow . . . . .	65
3.11.5	Thermophoresis . . . . .	70
3.11.6	Knudsen compressor . . . . .	72
3.11.7	Negative-temperature-gradient phenomenon . . . . .	81
<b>4</b>	<b>Weakly Nonlinear Theory – Finite Reynolds Numbers</b>	<b>85</b>
4.1	Problem . . . . .	86
4.2	S solution . . . . .	86
4.3	Fluid-dynamic-type equations . . . . .	92
4.4	Knudsen-layer analysis . . . . .	97
4.5	Slip condition and Knudsen layer . . . . .	101
4.5.1	On a simple solid boundary . . . . .	102
4.5.2	On an interface of a gas and its condensed phase . . . . .	103
4.6	Determination of macroscopic variables . . . . .	104
4.7	Rarefaction effect . . . . .	106
4.8	Force and mass and energy transfers on a closed body . . . . .	106
4.9	Summary of the asymptotic theory and a comment on a time-dependent problem . . . . .	109
4.10	Applications . . . . .	113
4.10.1	Half-space problem of evaporation and condensation . . . . .	113
4.10.2	Evaporation and condensation around a cylindrical or spherical condensed phase . . . . .	116
4.10.3	The difference of the temperature field for the S expansion and for the incompressible Navier–Stokes set in a time-dependent problem . . . . .	119
<b>5</b>	<b>Nonlinear Theory I – Finite Temperature Variations and Ghost Effect</b>	<b>123</b>
5.1	Problem . . . . .	123
5.2	SB solution . . . . .	125
5.3	Fluid-dynamic-type equations . . . . .	135
5.4	Knudsen layer and slip condition . . . . .	137
5.5	Determination of macroscopic variables . . . . .	146
5.6	Ghost effect: Incompleteness of the system of the classical gas dynamics . . . . .	148
5.6.1	Nonlinear thermal-stress flow and inappropriateness of the heat-conduction equation . . . . .	148
5.6.2	Ambiguity in the continuum world . . . . .	151
5.6.3	Reflection on the Navier–Stokes set of equations . . . . .	152
5.6.4	Illustrative examples . . . . .	153
5.6.5	Supplementary discussion . . . . .	157

5.7	Half-space problem of evaporation and condensation . . . . .	160
<b>6</b>	<b>Nonlinear Theory II – Flow with a Finite Mach Number around a Simple Boundary</b>	<b>167</b>
6.1	Problem . . . . .	167
6.2	Hilbert solution . . . . .	168
6.3	Viscous boundary-layer solution . . . . .	173
6.4	Knudsen-layer solution and slip condition . . . . .	185
6.5	Connection of Hilbert and viscous boundary-layer solutions . . .	192
6.6	Recipe for construction of solution . . . . .	194
6.7	Discussions . . . . .	196
<b>7</b>	<b>Nonlinear Theory III – Finite Speed of Evaporation and Condensation</b>	<b>203</b>
7.1	Problem . . . . .	203
7.2	Hilbert solution . . . . .	204
7.3	Knudsen layer . . . . .	206
7.4	Half-space problem of evaporation and condensation . . . . .	209
7.5	System of equations and boundary conditions in the continuum limit . . . . .	213
7.6	Generalized kinetic boundary condition . . . . .	216
7.7	Boundary-condition functions $h_1(M_n)$ , $h_2(M_n)$ , $F_s(M_n, \overline{M}_t, T/T_w)$ , and $F_b(M_n, \overline{M}_t, T/T_w)$ . . . . .	220
7.8	Applications . . . . .	225
7.8.1	Two-surface problem of evaporation and condensation . .	225
7.8.2	Evaporating flow from a spherical condensed phase into a vacuum . . . . .	226
7.8.3	Evaporating flow from a cylindrical condensed phase into a vacuum . . . . .	231
<b>8</b>	<b>Bifurcation of Cylindrical Couette Flow with Evaporation and Condensation</b>	<b>235</b>
8.1	Problem . . . . .	235
8.2	Solution type I . . . . .	237
8.2.1	Analysis . . . . .	237
8.2.2	Solution . . . . .	242
8.3	Solution type II . . . . .	244
8.4	Bifurcation diagram and transition solution . . . . .	250
8.5	Discussions for the other parameter range . . . . .	253
8.6	Concluding remark and supplementary comment . . . . .	253
<b>A</b>	<b>Supplementary Explanations and Formulas</b>	<b>257</b>
A.1	Formal derivation of the Boltzmann equation from the Liouville equation . . . . .	257
A.2	Solution of integral equation $\mathcal{L}(\phi) = Ih$ . . . . .	269
A.3	Derivation of the Stokes set of equations . . . . .	271

A.4	Golse's theorem on a one-way flow . . . . .	280
A.5	Functions $\mathcal{A}(\tilde{\zeta}, \hat{T}_{SB0})$ , $\mathcal{B}(\tilde{\zeta}, \hat{T}_{V0})$ , etc. . . . .	285
A.6	Viscosity and thermal conductivity . . . . .	289
A.7	Linear integral equations $\hat{J}(\hat{f}_{h0}, \hat{f}_{hm}) = Ih_{hm}$ , $\hat{J}(\hat{f}_{SB0}, \hat{f}_{SBm}) =$ $Ih_{SBm}$ , etc. . . . .	292
A.8	$\hat{J}_a(\zeta_i E, \zeta_j AE)$ , $\hat{J}_a(\zeta^2 E, (\zeta_i \zeta_j - \zeta^2 \delta_{ij}/3)BE)$ , etc. . . . .	295
A.9	Equation for the Knudsen layer and Bardos's theorem . . . . .	297
A.10	The boundary condition for the linearized Euler set of equations . . . . .	298
<b>B</b>	<b>Spherically Symmetric Field of Symmetric Tensor</b>	<b>301</b>
B.1	Problem . . . . .	301
B.2	$T_I(\zeta_i)$ on $\zeta_1$ axis . . . . .	302
B.3	$T_I(\zeta_i)$ at an arbitrary point . . . . .	304
B.3.1	Preparation . . . . .	304
B.3.2	Derivation of the expression of $T_I(\zeta_i)$ . . . . .	306
B.3.3	Summary . . . . .	311
B.4	Applications . . . . .	312
B.4.1	Definite integral $\int_{-\infty}^{\infty} \int \int \zeta_{i_1} \cdots \zeta_{i_{2S}} \exp(-\zeta^2) d\zeta_1 d\zeta_2 d\zeta_3 \dots$ . . .	312
B.4.2	Axially symmetric field . . . . .	313
<b>C</b>	<b>Kinetic-Equation Approach to Fluid-Dynamic Equations</b>	<b>315</b>
C.1	Introduction . . . . .	315
C.2	Exact kinetic-equation approach . . . . .	316
C.3	Discussion on numerical systems . . . . .	324
	<b>Bibliography</b>	<b>327</b>
	<b>Index</b>	<b>345</b>
