Contents

Series Editor's Preface	v
Editor's Foreword	xiii
Andrei Nikolaevich Kolmogorov. A brief biography	xv
Preface to the English edition	xix
1. A Fourier-Lebesgue series divergent almost everywhere	1
2. On the order of magnitude of the coefficients of Fourier-Lebesgue series	5
3. A remark on the study of the convergence of Fourier series	8
4. On convergence of Fourier series (in collaboration with G.A. Seliverstov)	10
5. Axiomatic definition of the integral	13
6. On the limits of generalization of the integral	15
I. Introduction (15). II. Definition of \mathcal{K} systems (19). III (21). IV (22). V (26). VI (27).	
7. On the possibility of a general definition of derivative, integral and summation of divergent series	33
8. On conjugate harmonic functions and Fourier series	35
9. On the tertium non datur principle	40
Introduction (40). I. Formal and intuitionistic points of view (40). II. Axioms of propositional logic (44). III. Particular propositional logic and its domain of applicability (51). IV. Pseudo-truth mathe- matics (55). V. Applications (60).	
10. On convergence of Fourier series (in collaboration with G.A. Seliverstov)	69
11. A Fourier-Lebesgue series divergent of everywhere	74
12. On convergence of series of orthogonal functions (in collaboration with D.E. Men'shov)	76
13. On operations on sets	87
14. On the Denjoy integration process	95
15. On the topological group-theoretic foundation of geometry	97

16. Studies on the concept of integral	100
Chapter 1. Introduction	100
Chapter 2. The first integration theory (Countable partitions)	105
§1. Definition and introductory remarks (105). §2. Definition and elementary properties of the integral (108). §3. Differential equivalence and a second definition of the integral (110). §4. A remark on infinite values of the integral (114). §5. Some special cases of integrability. Semi-additive functions and functions of bounded variation (116). §6. Some results on homogeneous functions (119). §7. Integrals of the type $\int_E f(x)\phi(dE)$ (122). §8. Examples of \mathfrak{M} -systems (126).	
Chapter 3. The second integration theory (Finite partitions)	128
§1. Introductory remarks (128). §2. Decomposable systems (129). §3. On the interrelation between the two methods of integration (132). §4. Examples (137).	
Appendix 1. The integral as a many-valued function	138
Appendix 2. On the justification of differentiation on abstract sets	140
17. On the notion of mean	144
18. On the compactness of sets of functions in the case of convergence in mean	147
19. On the interpretation of intuitionistic logic	151
20. On the foundation of projective geometry	159
21. On measure theory	161
Introduction (161). §1. Non-expanding mappings (163). §2. Maximum measure $\bar{\mu}^k(E)$ (164). §3. Minimum measure $\underline{\mu}^k(E)$ (167). §4. Some special properties of the measure functions $\bar{\mu}^k(E)$ and $\underline{\mu}^k(E)$ (168). §5. Cases when a linear measure is uniquely defined (170). §6. Measure theory in general metric spaces (172). §7. Uniqueness theorem for point sets in Euclidean spaces and its relation with surface measure theory (173). Appendix. New definition of measure of a linear set (178).	
22. On points of discontinuity of functions of two variables (in collaboration with I.Ya. Verchenko)	181
23. On normability of a general topological linear space	183
24. Continuation of the study of points of discontinuity of functions of two variables (in collaboration with I.Ya. Verchenko)	187

25. On the convergence of series in orthogonal polynomials	190
26. Laplace transformation in linear spaces	194
27. On the order of magnitude of the remainder term in the Fourier series of differentiable functions	196
§1. (197). §2. Asymptotic estimation of $C_n^{(p)}$ for $p = 2i + 1$ ($i \geq 0$) (198). §3. Asymptotic estimation of $C_n^{(p)}$ for $p = 2i$ ($i \geq 1$) (200).	
28. On the best approximation of functions of a given class	202
29. On duality in combinatorial topology	206
30. Homology rings of complexes and locally bicomact spaces	214
§1. The homology ring of a complex (214). §2. The homology ring of a locally bicomact space (219). §3. The case of two-sided manifolds (219).	
31. Finite coverings of topological spaces (in collaboration with P.S. Aleksandrov)	221
32. The Betti groups of locally bicomact spaces	226
33. Properties of the Betti groups of locally bicomact spaces	229
34. The Betti groups of metric spaces	232
35. Relative cycles. The Alexander duality theorem	234
36. On open mappings	236
37. Skew-symmetric forms and topological invariants	239
38. A study of the diffusion equation with increase in the amount of substance, and its application to a biological problem (in collaboration with I.G. Petrovskii and N.S. Piskunov)	242
39. A simplified proof of the Birkhoff-Khinchin ergodic theorem	271
§1. Introduction (271). §2. Reduction to the discrete case (272). §3. Proof of the main theorem (274).	
40. On inequalities for suprema of consecutive derivatives of an arbitrary function on an infinite interval	277
§1. Statement of the problem and results (277) §2. Sufficiency of condi- tion (1) (281). §3. The case $k = 1$ (283). §4. Necessity of condition (1) for any n (289).	
41. On rings of continuous functions on topological spaces (in collaboration with I.M. Gel'fand)	291
§1. The case of a bicomact space (292) §2. The ring $C'(S)$ in the general case (294). §3. The ring $C(S)$ in the general case (295).	

42. Curves in a Hilbert space invariant with respect to a one-parameter group of motions	298
43. Wiener spirals and some other interesting curves in a Hilbert space	303
44. Points of local topological character of countably-multiple open mappings of compacta	308
45. Local structure of turbulence in an incompressible viscous fluid at very large Reynolds numbers	312
46. On the degeneration of isotropic turbulence in an incompressible viscous fluid	319
47. Dissipation of energy in isotropic turbulence	324
48. Equations of turbulent motion in an incompressible fluid	328
49. A remark on Chebyshev polynomials least deviating from a given function	331
50. On the breakage of drops in a turbulent flow	339
51. On dynamical systems with an integral invariant on a torus	344
52. On the preservation of conditionally periodic motions under small variations of the Hamilton function	349
53. The general theory of dynamical systems and classical mechanics	355
Introduction (355). §1. Analytic dynamical systems and their stable properties (357). §2. Dynamical systems on a two-dimensional torus and some canonical systems with two degrees of freedom (360). §3. Are dynamical systems on compact manifolds "in general" transitive, and should we regard the continuous spectrum as the "general" case and the discrete spectrum as an "exceptional" case ? (365). §4. Some remarks on the non-compact case (367). §5. Transitive measures, spectra, and eigenfunctions of analytic systems (370).	
54. Some fundamental problems in the approximate and exact representation of functions of one or several variables	375
55. On the representation of continuous functions of several variables as superpositions of continuous functions of a smaller number of variables	378
56. On the representation of continuous functions of several variables as superpositions of continuous functions of one variable and addition	383
§1. Construction of the functions ψ^{pq} (384). §2. Construction of the functions χ^q (385).	

57. On the linear dimension of topological vector spaces	388
§1. The linear dimension $\delta(E)$ (389). §2. The approximate dimension $d_a(E)$ (391).	
58. A refinement of the concept of the local structure of turbulence in an incompressible viscous fluid at large Reynolds numbers	393
59. P.S. Aleksandrov and the theory of δs -operations	398
60. A qualitative study of mathematical models of population dynamics	403
§1. Introductory notes (403). §2. Volterra's equations and their generalization (404). §3. Investigation of the behaviour of solutions of the system (4) (405).	
Commentary	410
On the papers on the theory of functions and set theory (A.N. Kolmogorov)	410
Trigonometric and orthogonal series (P.L. Ul'yanov)	411
A. Divergence of trigonometric Fourier series (411). B. Divergence of orthogonal series (413). C. Convergence of Fourier series (414). D. On Fourier-Lebesgue coefficients (416). E. Conjugate functions and series (418).	
Descriptive set theory (I.I. Parovichenko)	424
Measure theory and theory of the integral (V.A. Skvortsov)	428
On the paper "Studies on the concept of integral" (428). On the paper "On the limits of generalization of the integral" (429). On the paper "On the Denjoy integration process" (430). On the paper "On measure theory" (430). On the paper "On the notion of the mean" (431).	
Points of discontinuity of functions (E.P. Dolzhenko)	435
Theory of approximation (S.A. Telyakovskii and V.M. Tikhomirov)	436
Inequalities for derivatives (V.M. Tikhomirov and G.G. Magaril-Il'yaev)	442
Rings of continuous functions (E.A. Gorin)	447
Curves in a Hilbert space (Yu.A. Rozanov)	451
On the papers on intuitionistic logic (A.N. Kolmogorov)	451
Intuitionistic logic (V.A. Uspenskii and V.E. Plisko)	452
On the papers on homology theory (A.N. Kolmogorov)	466
Homology theory (G.S. Chogoshvili)	467
On the paper "On open mappings" (A.N. Kolmogorov)	476

Topology (A.V. Arkhangel'skii)	476
On the paper "Finite coverings of topological spaces" (476). On the paper "On open mappings" (476).	
Axiomatics of projective geometry (A.V. Mikhalev)	479
On the paper on the diffusion equation (A.N. Kolmogorov)	481
The diffusion equation (G.I. Barenblatt)	481
On the papers on turbulence (A.N. Kolmogorov)	487
Turbulence (A.M. Yaglom)	488
On the papers on classical mechanics (A.N. Kolmogorov)	503
Classical mechanics (V.I. Arnol'd)	504
1. The basic problem of dynamics (504). 2. Rigid body and plane- toid (504). 3. Limiting degeneration (505). 4. Self-degeneration (506). 5. Diffusion (506). 6. Measure of the exceptional set (507). 7. Smooth- ness (508). 8. Non-Hamiltonian systems (509). 9. Numerical trials (510). 10. Exponential instability (510). 11. Exchange, capture, and oscillation (512). 12. Spectral properties (513).	
On the papers on superpositions (A.N. Kolmogorov)	518
Superpositions (V.I. Arnol'd)	519
1. Representability theorems (519)§2. Non-representability theorems (520).§3. Hilbert's thirteenth problem (521). 4. The resolvent problem (522). 5. Approximations (523).	
List of works by A.N. Kolmogorov	528
