The Mathematics of the Bose Gas and its Condensation

Birkhauser Verlag
Basel • Boston • Berlin

Contents

	Preface	vii
	Acknowledgments	viii
1	**Introduction**	**1**
	1.1 The Ideal Bose Gas	1
	1.2 The Concept of Bose-Einstein Condensation	4
	1.3 Overview and Outline	6
2	**The Dilute Bose Gas in 3D**	**9**
	2.1 Upper Bound	14
	2.2 Lower Bound	17
3	**The Dilute Bose Gas in 2D**	**27**
4	**Generalized Poincare Inequalities**	**33**
5	**Bose-Einstein Condensation and Superfluidity for Homogeneous Gases**	**39**
	5.1 Bose-Einstein Condensation	39
	5.2 Superfluidity	43
6	**Gross-Pitaevskii Equation for Trapped Bosons**	**47**
	6.1 Three Dimensions	48
	6.2 Two Dimensions	59
7	**Bose-Einstein Condensation and Superfluidity for Dilute Trapped Gases**	**63**
8	**One-Dimensional Behavior of Dilute Bose Gases in Traps**	**71**
	8.1 Discussion of the Results	75
	8.2 The ID Limit of 3D GP Theory	78
	8.3 Outline of Proof	80

9 Two-Dimensional Behavior in Disc-Shaped Traps **87**
9.1 The 2D Limit of 3D GP Theory 92
9.2 Upper Bound 94
9.3 Scattering Length 101
9.4 Lower Bound 103

10 The Charged Bose Gas, the One- and Two-Component Cases **109**
10.1 The One-Component Gas 109
10.2 The Two-Component Gas 112
10.3 The Bogoliubov Approximation 113
10.4 The Rigorous Lower Bounds 116
10.5 The Rigorous Upper Bounds 124

11 Bose-Einstein Quantum Phase Transition in an Optical Lattice Model **131**
11.1 Introduction 131
11.2 Reflection Positivity 136
11.3 Proof of BEC for Small A and T 137
11.4 Absence of BEC and Mott Insulator Phase 142
11.5 The Non-Interacting Gas 147
11.6 Conclusion 147

A Elements of Bogoliubov Theory **149**

B An Exactly Soluble Model **165**

C Definition and Properties of Scattering Length **171**

D c-Number Substitutions and Gauge Symmetry Breaking **177**

Bibliography **187**

Index **201**
