## Part I Maxwell Fields: General Theory

---

<b>1</b>	<b>The Rudiments of Abstract Differential Geometry . . . . .</b>	<b>3</b>
1	The Differential Setting . . . . .	3
1.1	Logarithmic Derivation . . . . .	7
2	$\mathcal{A}$ -Connections . . . . .	8
2.1	The Classical Case . . . . .	10
2.2	Local Definition of an $\mathcal{A}$ -Connection . . . . .	13
2.3	Gauge Transformation . . . . .	18
3	Induced $\mathcal{A}$ -Connections . . . . .	20
4	Existence of $\mathcal{A}$ -Connections. Criteria of Existence . . . . .	27
5	The Space of $\mathcal{A}$ -Connections . . . . .	30
6	Related $\mathcal{A}$ -Connections. Moduli Space of $\mathcal{A}$ -Connections . . . . .	33
6.1	Moduli Space . . . . .	34
7	Curvature . . . . .	41
7.1	Local Form of the Curvature . . . . .	44
7.2	Transformation Law of Field Strength (Curvature) . . . . .	46
8	Fundamental Identities of the Curvature (Continued). Torsion . . . . .	48
8.1	Pullback of Curvature . . . . .	52
8.2	Torsion . . . . .	53
9	$\mathcal{A}$ -Connections Compatible with $\mathcal{A}$ -Metrics . . . . .	54
9.1	Hermitian $\mathcal{A}$ -Connections . . . . .	56
9.2	Matrices of $\mathcal{A}$ -Metrics . . . . .	58
9.3	Kähler $\mathcal{A}$ -Metrics . . . . .	61

9.4	Einstein $\mathcal{A}$ -Metrics .....	62
9.5	Lorentz $\mathcal{A}$ -Metrics .....	63
10	The Hodge $*$ -Operator. Volume Form .....	64
<b>2</b>	<b>Elementary Particles: Sheaf-Theoretic Classification, by Spin-Structure, According to Selesnick's Correspondence Principle ..</b>	<b>69</b>
1	Preliminaries. Basic Notions .....	69
2	Classification of Elementary Particles, Through Vector Sheaves, According to Their Spin-Structures .....	71
2.1	Standard Classification of Elementary Particles by Spin Number .....	71
2.2	Classification of Elementary Particles Through Module-Structures (à la Selesnick) .....	73
3	Quantum State Modules .....	74
4	Free Bosons and Fermions in Terms of Finitely Generated Projective Modules .....	79
5	Finitely Generated Projective Modules and Vector Bundles (Serre–Swan Theory) .....	81
6	Vector Sheaves and Elementary Particles (Continued: Selesnick's Correspondence) .....	84
6.1	Smooth ( $C^\infty$ -) Case .....	89
7	Cohomological Classification of Elementary Particles .....	91
7.1	Vector Sheaves .....	92
7.2	Line Sheaves .....	95
7.3	Elementary Particles .....	97
8	Elementary Particles as Principal Sheaves .....	98
8.1	Principal Sheaves .....	100
9	Vector Sheaves Associated with Principal Sheaves and Physical Interpretation .....	102
9.1	Physical Applications .....	109
9.2	Interacting Particles .....	110
<b>3</b>	<b>Electromagnetism .....</b>	<b>113</b>
1	The Electromagnetic Field. The Maxwell Category .....	114
2	Characterization of the Maxwell Group Through Local Data .....	118
2.1	Local Characterization of Maxwell Fields .....	120
2.2	Local Characterization of (Gauge) Equivalent Maxwell Fields .....	125
3	A Natural Fibration .....	128
3.1	The Image of (the Natural Fibration) $\tau$ .....	130
3.2	Weil's Integrality Theorem (Again) .....	132
3.3	The Image of the Map $\tau$ (Continued) .....	138
3.4	Cohomology Class Associated with the Field Strength of a Maxwell Field (Continued) .....	142
4	The Fibration $\tau$ as a Group Morphism .....	147
5	Action of $H^1(X, \mathbb{C}^*)$ on the Maxwell Group $\Phi_{\mathcal{A}}^1(X)^\nabla$ .....	152

5.1	Freeness of the Action of $H^1(X, \mathbb{C}^*)$ on the Maxwell Group	154
5.2	Transitivity of the Action of $H^1(X, \mathbb{C}^*)$ on the Maxwell Group	157
5.3	$\Phi_{\mathcal{A}}^1(X)_R^\nabla$ , as a Principal Homogeneous Space	164
6	The Hermitian Counterpart	168
6.1	Action of $H^1(X, S^1)$ on $\Phi_{\mathcal{A}}^1(X)^\nabla$	171
6.2	Hermitian Maxwell Fields	172
6.3	Hermitian Light Bundles	175
6.4	Hermitian Light Bundles over Path-Connected Spaces	178
7	Equivariant Actions of $H^1(X, \mathbb{C}^*)$ (Continued)	181
7.1	The Kernel of the Map $\tau$	186
7.2	Hermitian Counterpart (Continued)	191
8	The Maxwell Group $\Phi_{\mathcal{A}}^1(X)^\nabla$ as a Central Extension (Continued)	192
8.1	The Hermitian Counterpart (Continued)	194

<b>4</b>	<b>Cohomological Classification of Maxwell and Hermitian Maxwell Fields</b>	197
1	Hypercohomology with Respect to a (Differential) $\mathcal{A}$ -Complex	197
1.1	Sheaf Cohomology	197
1.2	Hypercohomology	202
2	Čech Hypercohomology	206
3	Čech Hypercohomology Relative to a Two-Term $\mathcal{A}$ -Complex	210
3.1	Identification of $\check{H}^1(X, \mathcal{E}^0 \xrightarrow{d^0} \mathcal{E}^1)$	212
4	Čech Hypercohomology, with Respect to the Two-Term $\mathbb{Z}$ -Complex $\mathcal{A}^* \xrightarrow{\hat{\partial}} \Omega^1$	216
4.1	Characterization of the (Abelian) Čech Hypercohomology Group $\check{H}^1(X, \mathcal{A}^* \xrightarrow{\hat{\partial}} \Omega^1)$	218
5	Cohomological Wording of the Maxwell Group	221
6	Abstract Maxwell Equations	227
7	The Hermitian Analogue	230

<b>5</b>	<b>Geometric Prequantization</b>	233
1	Symplectic Sheaves	233
2	Prequantizable Symplectic Sheaves	237
3	The Hermitian Framework	242
4	Cohomological Classification of (Abstract) Geometric Prequantizations of Hermitian Maxwell Fields with a Given Field Strength	246
5	Prequantization of Elementary Particles	250
5.1	Bosonic Case	251
5.2	The Chern Isomorphism (Continued), and Consequences	252
5.3	Geometric Prequantization of Bosons (Continued)	256
5.4	Fermionic Case	257
5.5	Pull-Back of Maxwell Fields	259

5.6 Geometric Prequantization of Fermions (Continued) . . . . .	267
<b>References</b> . . . . .	273
<b>Index of Notation</b> . . . . .	281
<b>Index</b> . . . . .	289
