Christian Ullrich

Forecasting and Hedging in the Foreign Exchange Markets

Springer

Contents

Part I Introduction

1	Motivation	3
2	Analytical Outlook	7
2.1	Foreign Exchange Market Predictability	7
2.2	Exchange Rate Forecasting with Support Vector Machines	8
2.3	Exchange Rate Hedging in a Simulation/Optimization Framework	10

Part II Foreign Exchange Market Predictability

3	Equilibrium Relationships	15
3.1	Purchasing Power Parity Theorem	15
3.1.1	Absolute PPP	15
3.1.2	Relative PPP	16
3.1.3	Empirical Evidence	17
3.1.4	Explanations for Deviations from PPP	19
3.2	Interest Rate Parity (IRP) Theorem	21
3.2.1	Covered Interest Rate Parity (CIP)	21
3.2.2	Uncovered Covered Interest Rate Parity (UIP)	22
3.2.3	Empirical Evidence	22
3.2.4	Explanations for Deviations from IRP	24
4	Market Efficiency Concepts	27
4.1	Informational Efficiency	27
4.2	Speculative Efficiency	28
5	Views from Complexity Theory	29
5.1	Introduction	29
5.2	Calculating Fixed Point Market Equilibrium	32
5.2.1	Computational Complexity of Centralized Equilibrium	32

5.2.2	Computational Complexity of Decentralized Equilibrium . . .	33
5.2.3	Adaptive/Inductive Learning of Rational Expectations Equilibria	34
5.3	Computational Difficulties with Efficiency	35
5.3.1	Information Interpretation	35
5.3.2	Computational Complexity of Arbitrage	37
6	Conclusions	39
 Part III Exchange Rate Forecasting with Support Vector Machines		
7	Introduction	43
8	Statistical Analysis of Daily Exchange Rate Data	47
8.1	Time Series Predictability	47
8.2	Empirical Analysis	47
8.2.1	Stationarity	50
8.2.2	Normal Distribution	53
8.2.3	Linearity	54
8.2.4	Heteroskedasticity	57
8.2.5	Nonlinearity	61
8.2.6	Results	63
9	Support Vector Classification	65
9.1	Binary Classification Problem (BCP)	65
9.2	On the Computational Complexity of the BCP	65
9.3	Supervised Learning	67
9.4	Structural Risk Minimization	69
9.5	Support Vector Machines	71
9.5.1	Learning in Feature Space	71
9.5.2	Kernel Functions	72
9.5.3	Optimal Separating Hyperplane	73
9.5.4	Generalized Optimal Separating Hyperplane	79
9.5.5	Generalization in High Dimensional Feature Space	81
10	Description of Empirical Study and Results	83
10.1	Explanatory Dataset	83
10.1.1	Phase One: Input Data Selection	84
10.1.2	Phase Two: Dimensionality Reduction	84
10.2	SVM Model	89
10.3	Sequential Minimization Optimization (SMO) Algorithm	89
10.4	Kernel Selection	91
10.5	Cross Validation	94
10.6	Benchmark Models	95

10.7 Evaluation Procedure 97
 10.7.1 Statistical Evaluation 97
 10.7.2 Operational Evaluation 98
 10.8 Numerical Results and Discussion 99

Part IV Exchange Rate Hedging in a Simulation/Optimization Framework

11 Introduction 107

12 Preferences over Probability Distributions 117
 12.1 Currency Hedging Instruments 117
 12.1.1 Forward 117
 12.1.2 Plain Vanilla Option 119
 12.1.3 Straddle 121
 12.2 Formal Relationship Between Firm and Capital Market Expectations 122
 12.3 Specification of Probability Distribution Function 123
 12.4 Expected Utility Maximization and Three-Moments Ranking 124
 12.4.1 Preference Structures over Lotteries 124
 12.4.2 Preference Structures over Utility Functions 126
 12.4.3 Expected Utility Maximization 126
 12.4.4 Increasing Wealth Preference 127
 12.4.5 Risk Aversion Preference 127
 12.4.6 Ruin Aversion Preference 128
 12.5 Specification of Utility Function 129

13 Problem Statement and Computational Complexity 133
 13.1 Problem Statement 133
 13.2 Computational Complexity Considerations 135
 13.2.1 Complexity of Deterministic Combinatorial Optimization 135
 13.2.2 Complexity of Stochastic Combinatorial Optimization 137
 13.2.3 Objective Function Characteristics 139

14 Model Implementation 141
 14.1 Simulation/Optimization 141
 14.2 Simulation Model 142
 14.2.1 Datasets 142
 14.2.2 Component 1: Equilibrium 143
 14.2.3 Component 2: Nonlinear Mean Reversion 145
 14.2.4 Component 3: Gaussian Random Walk 148
 14.2.5 Aggregation of Components 150
 14.2.6 Calibration of Parameters 151
 14.3 Optimization Model 152
 14.3.1 Solution Construction Algorithm 152
 14.3.2 Scatter Search and Path Relinking 154

- 15 Simulation/Optimization Experiments 163**
 - 15.1 Practical Motivation 163
 - 15.2 Model Backtesting 163
 - 15.2.1 Overview 163
 - 15.2.2 Data Inputs and Parameters 164
 - 15.2.3 Evaluation Procedure 170
 - 15.3 Results 173
 - 15.3.1 Ex Ante Performance 173
 - 15.3.2 Ex Post Performance 176

- Part V Contributions of the Dissertation**

- 16 Exchange Rate Forecasting with Support Vector Machines 183**

- 17 Exchange Rate Hedging in a Simulation/Optimization Framework . . 185**

- Part VI References**

- References 191**
