Introduction	xix

## Part I The General Equilibrium Model with Incomplete Markets

1. THE MODEL AND SOME FUNDAMENTALS	3
1 Information Structure And Commodity Space	3
2 Consumer Characteristics	4
2.1 Expected Utility Hypothesis	8
3 Market Structure	12
3.1 Payoff Matrix	12
3.2 Budget Set	13
4 Competitive Equilibria and No-Arbitrage	14
4.1 Financial Markets Equilibrium Concept	14
4.2 No-Arbitrage Condition	16
4.3 Walras Law in the First Period	17
4.4 Fundamental Theorem of Asset Pricing	18
4.5 Asset Pricing Theories	23
4.6 No-Arbitrage Equilibrium Concept	24
5 Dual concepts of excess demand	28
6 Pricing of Derivatives	29
7 Efficiency of GEI-equilibria	35
2. EXISTENCE OF EQUILIBRIA	39

1	Assumptions to obtain Existence	40
2	Discussion of the Assumptions	44
2.1	Cheaper Point Assumption	44
2.2	Boundary Behavior Assumption	49
2.3	A Final Remark	53
3	Properties of Excess Demand and Existence of Equilibria	54
3.	STRUCTURE OF GELEXCESS DEMAND	61
1	The Intrinsic Limits of the Rationality Hypothesis	61
2	Mantel's Theorem in Complete Markets	62
3	Some Preliminaries	62
4	Anything Goes	63
5	Debreu's Theorem	67
4.	THE INDEX-THEOREM	71
1	The Idea of the Index Theorem	71
2	Differentiability of Excess Demand	72
3	Equivalent Inward Pointing Vector Field	74
4	Local Uniqueness and the Index Theorem	75
5.	UNIQUENESS IN THE ARROW-DEBREU MODEL	79
1	Introduction	79
2	Defining Uniqueness of Arrow-Debreu Equilibria	80
3	Useful Properties of Market Excess Demand	81
4	How to Obtain Uniqueness	83
4.1	Explicit Pricing Formulas	84
4.2	Existence of a Representative Consumer	94
4.3	How to Obtain Monotonicity	95
4.4	How to Obtain the Property of Gross Substitution	97
5	Overview for the Arrow-Debreu Model	98
6.	UNIQUENESS IN THE FINANCE GEI-MODEL	101
1	Introduction	101
2	Defining Uniqueness of Financial Markets Equilibria	102
3	Properties of Market Demand for Assets	104
3.1	Decomposition of the Jacobian-Matrix	104
3.2	WARP and Monotonicity	108
3.3	Gross Substitution	113
3.4	Negative Definiteness versus Gross Substitution	121

4	How to Obtain Uniqueness	123
4.1	Introduction	123
4.2	Explicit Pricing Formulas	124
4.3	Quasi-homothetic Utility Functions	131
4.4	Quasi-linear Utility Functions	139
4.5	The Theorem of Mitjushin-Polterovich	144
4.6	Small Risk Aversion	158
4.7	Two Securities and Small Relative Risk Aversion	167
4.8	Overview for the GEI-Model	174
5	Robustness of the Number of Equilibria	176
5.1	Further Properties of Arbitrage-Free Prices	177
5.2	Continuous Differentiability of Asset Demand	186
5.3	Robustness of the Number of Equilibria	188
6	Limits of Transferability	192
6.1	Limits with Quasi-Linearity	193
6.2	Limits with Cobb-Douglas Utility	196
6.3	Limited Risk Sharing	199
7	Uniqueness of Equilibria with Small Trading Volume	203
7.1	A Leading Example	204
7.2	Generalization of the Leading Example	206
1	Proof of Lemma 6.6	208
2	Proof of Lemma 6.7	209
3	Proof of Lemma 6.8	210

Part II The Capital Asset Pricing Model

7.	THE MODEL AND SOME FUNDAMENTALS	215
1	Introduction	215
2	Information Structure And Commodity Space	216
3	The Agents' Decision Problem	217
4	Mean-Variance Utility an Alternative to Expected Utility	219
5	Equilibria in the CAPM without a Riskless Asset	221
6	Equilibria in the CAPM with a Riskless Asset	226
7	Risk Aversion in the CAPM	226
8	Monotonicity and Positive State Prices	228
8.	EXISTENCE OF EQUILIBRIA	235
1	Introduction	235

2	Necessary Conditions for Existence	237
3	Sufficient Conditions for Existence	238
4	Efficient Frontier	242
9.	MARKET DEMAND FUNCTIONS IN THE CAPM	245
1	Introduction	245
2	Structure of Market Demand	246
3	Number of CAPM-equilibria	254
10.	UNIQUENESS OF EQUILIBRIA IN THE CAPM	259
1	Introduction	259
2	Uniqueness of equilibria in the CAPM with a riskless asset	261
3	Multiplicity of equilibria in the CAPM without a riskless asset	268
	Appendices	271
	Mathematics	271
	Assumptions	275
	Main Results	279
