

HANDBOOK ON MODELLING FOR DISCRETE OPTIMIZATION

Edited by

GAUTAM APPA

Operational Research Department
London School of Economics

LEONIDAS PITSOULIS

Department of Mathematical and Physical Sciences
Aristotle University of Thessaloniki

H. PAUL WILLIAMS

Operational Research Department
London School of Economics

Technische Universität Darmstadt	
Fachbereich 1	
Betriebswirtschaftliche Bibliothek	
Inventar-Nr.:	56.468
Abstell-Nr.:	A14/1837
	
	
	

Contents

List of Figures	ix
List of Tables	xiii
Contributing Authors	xv
Preface	xix
Acknowledgments	xxii
Part I Methods	
1	
The Formulation and Solution of Discrete Optimisation Models	3
<i>H. Paul Williams</i>	
1. The Applicability of Discrete Optimisation	3
2. Integer Programming	4
3. The Uses of Integer Variables	5
4. The Modelling of Common Conditions	9
5. Reformulation Techniques	11
6. Solution Methods	22
References	36
2	
Continuous Approaches for Solving Discrete Optimization Problems	39
<i>Panos M Pardalos, Oleg A Prokopyev and Stanislav Busygin</i>	
1. Introduction	39
2. Equivalence of Mixed Integer and Complementarity Problems	40
3. Continuous Formulations for 0–1 Programming Problems	42
4. The Maximum Clique and Related Problems	43
5. The Satisfiability Problem	48
6. The Steiner Problem in Graphs	51
7. Semidefinite Programming Approaches	52
8. Minimax Approaches	54
References	55
3	
Logic-Based Modeling	61
<i>John N Hooker</i>	
1. Solvers for Logic-Based Constraints	63
2. Good Formulations	64

3.	Propositional Logic	69
4.	Cardinality Formulas	77
5.	0-1 Linear Inequalities	83
6.	Cardinality Rules	85
7.	Mixing Logical and Continuous Variables	87
8.	Additional Global Constraints	92
9.	Conclusion	97
	References	99
4		
	Modelling for Feasibility - the case of Mutually Orthogonal Latin Squares Problem	103
	<i>Gautam Appa, Dimitris Magos, Ioannis Mourtos and Leonidas Pitsoulis</i>	
1.	Introduction	104
2.	Definitions and notation	106
3.	Formulations of the k MOLS problem	108
4.	Discussion	122
	References	125
5		
	Network Modelling	129
	<i>Douglas R. Shier</i>	
1.	Introduction	129
2.	Transit Networks	130
3.	Amplifier Location	133
4.	Site Selection	134
5.	Team Elimination in Sports	137
6.	Reasoning in Artificial Intelligence	139
7.	Ratio Comparisons in Decision Analysis	141
8.	DNA Sequencing	144
9.	Computer Memory Management	146
	References	148
6		
	Modeling and Optimization of Vehicle Routing Problems	151
	<i>Jean-Francois Cordeau and Gilbert Laporte</i>	
1.	Introduction	151
2.	The Vehicle Routing Problem	152
3.	The Chinese Postman Problem	163
4.	Constrained Arc Routing Problems	168
5.	Conclusions	181
	References	181
	Part II Applications	
7		
	Radio Resource Management	195
	<i>Katerina Papadaki and Vasilis Friderikos</i>	
1.	Introduction	196
2.	Problem Definition	199

<i>Contents</i>	vii
3. Myopic Problem Formulations	203
4. The dynamic downlink problem	208
5. Concluding Remarks	222
References	224
8	
Strategic and tactical planning models for supply chain: an application of stochastic mixed integer programming	227
<i>Gautam Mitra, Chandra Poojari and Suvrajeet Sen</i>	
1. Introduction and Background	228
2. Algorithms for stochastic mixed integer programs	234
3. Supply chain planning and management	237
4. Strategic supply chain planning: a case study	244
5. Discussion and conclusions	259
References	260
9	
Logic Inference and a Decomposition Algorithm for the Resource-Constrained Scheduling of Testing Tasks in the Development of New Pharmaceutical and Agrochemical Products	265
<i>Christos T. Maravelias and Ignacio E. Grossmann</i>	
1. Introduction	266
2. Motivating Example	266
3. Model	268
4. Logic Cuts	271
5. Decomposition Heuristic	277
6. Computational Results	281
7. Example	281
8. Conclusions	282
9. Nomenclature	283
10. Acknowledgment	284
References	284
Appendix: Example Data	285
10	
A Mixed-integer Nonlinear Programming Approach to the Optimal Planning of Offshore Oilfield Infrastructures	291
<i>Susara A. van den Heever and Ignacio E. Grossmann</i>	
1. Introduction	291
2. Problem Statement	294
3. Model	295
4. Solution Strategy	301
5. Example	306
6. Conclusions and Future Work	309
7. Acknowledgment	311
8. Nomenclature	312
References	314
11	
Radiation Treatment Planning: Mixed Integer Programming Formulations and Approaches	317

Michael C. Ferris, Robert R. Meyer and Warren D'Souza

1.	Introduction	318
2.	Gamma Knife Radiosurgery	321
3.	Brachytherapy Treatment Planning	327
4.	IMRT	331
5.	Conclusions and Directions for Future Research	336
	References	336

12

Multiple Hypothesis Correlation in Track-to-Track Fusion Management 341

Aubrey B Poore, Sabino M Gadaleta and Benjamin J Slocumb

1.	Track Fusion Architectures	344
2.	The Frame-to-Frame Matching Problem	347
3.	Assignment Problems for Frame-to-Frame Matching	350
4.	Computation of Cost Coefficients using a Batch Methodology.	360
5.	Summary	368
	References	369

13

Computational Molecular Biology 373

Giuseppe Lancia

1.	Introduction	373
2.	Elementary Molecular Biology Concepts	377
3.	Alignment Problems	381
4.	Single Nucleotide Polymorphisms	401
5.	Genome Rearrangements	406
6.	Genomic Mapping and the TSP	412
7.	Applications of Set Covering	415
8.	Conclusions	417
	References	418
