Modeling Dynamic Economic Systems

With a Foreword by Jay W. Forrester

With 244 Illustrations and a CD-ROM

Springer

Contents

Foreword	v
<i>Jay W. Forrester</i>	vii
Series Preface	ix
Preface	xiii
Notation	
 Part 1 Introduction	 1
1 Modeling Dynamic Systems	3
1.1 Model Building	3
1.2 Static, Comparative Static, and Dynamic Models	5
1.3 Model Components	7
1.4 Modeling in STELLA	9
1.5 Modeling Principles	19
1.6 Model Confirmation	21
1.7 Modeling of Natural Resource Use	23
1.8 Extending the Modeling Approach	25
2 Disaggregation of Stocks	30
 Part 2 Methods for Dynamic Modeling	 35
3 System Boundaries in Space and Time	37
3.1 Introduction	37
3.2 Energy Cost of Production at the Level of the Firm	38
3.3 Extending the System Boundaries	41
3.4 Sensitivity Analysis	48
4 Scheduling Flows	56
4.1 Conveyors, Queues, and Ovens	56
4.2 Modeling Discrete Flows in Space and Time	57
4.3 Optimizing Traffic Flow	62
5 Positive Feedback in the Economy	76
	xv

6	Derivatives and Lags	82
6.1	Introduction	82
6.2	Derivatives and Lags: Some Applications	86
6.2.1	Single-Output Firm	86
6.2.2	Two-Output Firm	88
Part 3	Microeconomic Models of Firms	91
7	Introduction to Modeling Economic Processes	93
8	Substitution of Inputs in Production	95
8.1	Trade-Off Possibility Frontiers	95
8.2	Profit Maximization with Several Inputs	98
9	Time Value	102
9.1	Current and Present Value Calculation	102
9.2	Cost-Benefit Analysis	107
10	Opportunity Cost	112
11	The Profit-Maximizing Competitive Firm	120
12	The Profit-Maximizing Monopoly	127
12.1	Introduction	127
12.2	Effects of Taxes on Monopolistic Output and Price	131
12.3	Monopolistic Production and Pollution	134
13	Monopolistic Collusion	141
14	Quasi-Competitive Equilibrium	147
14.1	Finding the Number of Profit-Maximizing Competitors	147
14.2	Use of MADONNA with STELLA	152
15	Modeling Economic Games	154
15.1	Arms Race	154
15.2	Barter Economy	157
15.3	Sealed-Bid, Second-Price Auction Game	160
Part 4	Modeling Optimal Use of Nonrenewable Resources	169
16	Competitive Scarcity	171
16.1	Basic Model	171
16.2	Competitive Scarcity with Various DT	180
17	Competitive Scarcity with Substitution	183
17.1	Price Effects	183
17.2	Sudden Demand Shift	186
17.3	S-Shaped Substitution Model	188

18	Competitive Scarcity with Cost Dependent on Production Rate and Resource Size	194
19	Competitive Scarcity with Technical Change	198
20	Competitive Scarcity with Exploration	203
21	Monopoly Scarcity	209
22	Monopoly Scarcity with Variable Interest Rate	215
23	Monopoly Scarcity with Cost Dependent on Production Rate and Resource Size	220
Part 5	Modeling Optimal Use of Renewable Resources	225
24	Optimal Timber Harvest	227
25	Managing Open Access Resources	233
26	Optimal Harvest from Fisheries	246
27	Predator-Prey Models of Fisheries	255
27.1	Basic Fisheries Model	255
27.2	Fishing with Nonmalleable Capital	260
28	Spatial Fishery Model	266
28.1	Basic Model	266
28.2	Management of a Multiregion Fishery	276
Part 6	Chaos in Economic Models	283
29	Preference Cycles and Chaos	285
30	Nonmonotonic Demand and Supply Curves	292
31	Price Expectation and Production Lags	298
32	Chaos in Macroeconomic Models	304
Part 7	Conclusions	309
33	Building a Modeling Community	311
Appendix		313
A1	Installation Instructions for MacIntosh Version	313
A2	Installation Instructions for Windows Version	314
A3	Quick Help Guide	315
A3.1	Overview of STELLA Operating Environment	315
A3.2	Drawing an Inflow to a Stock	316
A3.3	Drawing an Outflow from a Stock	317

A3.4	Replacing a Cloud with a Stock	318
A3.5	Bending Flow Pipes	319
A3.6	Repositioning Flow Pipes	319
A3.7	Reversing Direction of a Flow	320
A3.8	Flow Define Dialog—Builtins	320
A3.9	Moving Variable Names	321
A3.10	Drawing Connectors	322
A3.11	Defining Graphs and Tables	323
A3.12	Dynamite Operations on Graphs and Tables	324
MADONNA Quick Start		325
B1	Installation of MADONNA	325
B2	Example: Harmonic Oscillator	325
B2.1	Writing the Model Equations	325
B2.2	Compiling the Model	326
B2.3	Running the Model	326
B2.4	The Graph Window	327
B2.5	Multiple Runs	327
