Dynamic Modeling

Second Edition

With a Foreword by Donella H. Meadows

With 273 Illustrations

Includes CD-ROM

Springer

Contents

Foreword	v
Series Preface	vii
Preface to the Second Edition	ix
Preface to the First Edition	xi
Part 1 Introduction	1
"1 Modeling Dynamic Systems	3
1.1 Model Components	3
1.2 Dynamic Modeling as a Skill and Art	8
1.3 Modeling in STELLA	12
1.4 Principles of Modeling	21
Part 2 Some General Methods for Modeling	25
2 Four-Model Set	27
2.1 Stimulus-Response Model	27
2.2 Self-Referencing Model	30
2.3 Goal-Seeking Model	33
2.4 Goal-Setting Model	35
2.5 Examples	38
2.5.1 <i>Exponential Decay of a Stock</i>	38
2.5.2 <i>Newtonian Cooling</i>	40
3 Gradual Development of a Dynamic Model	43
3.1 Modeling Industrialization for a Simple Agrarian Society	43
3.2 Impacts of Per Capita Food Consumption on Population Growth	48
3.3 Adding Agriculture	52
3.4 Adding Industry	55

4	Two Independent Variables	60
4.1	Population Cohorts	60
4.1.1	<i>Basic Cohort Model</i>	60
4.1.2	<i>Population Cohort Array</i>	66
4.1.3	<i>U.S. Population Growth</i>	72
4.2	River Toxins	89
5	Randomness	96
5.1	Flipping a Coin	96
5.2	Intoxication Model	98
6	Positive and Negative Feedback	102
6.1	The Basic Model	102
6.2	Positive Feedback with Fixed Points	105
6.3	Elaborations	108
7	Derivatives and Lags	111
7.1	Introduction	111
7.2	Applications of Derivative [^] and Lags	113
7.2.1	<i>Simple Population Model</i>	113
7.2.2	<i>Two-Population Model</i>	114
Part 3	Chemistry Models	119
8	The Law of Mass Action	121
8.1	Breakdown of Nitrogen Dioxide into Nitrogen Oxide and Oxygen	121
8.2	Stratospheric Ozone Depletion	124
9	Chance-Cleland Model for Enzyme-Substrate Interaction	129
10	The Olsen Oscillator	133
Part 4	Genetics Models	139
11	Mating of Alleles	141
11.1	Heterozygosity and Disease Resistance	141
11.2	The Mating of Two Alleles into a Genotype: Proving the Hardy-Weinberg Law	142
12	Natural Selection and Mutation	149
13	Artificial Worms	156
Part 5	Ecological Models	171
14	Robin Population	173
15	Two-Stage Insect Model	178
16	The Zebra Mussel	182

17	Single Cell Forest	192
18	Predator-Prey Models	204
	18.1 Basic Model of Predator-Prey Interactions	204
	18.2 Spatial Predator-Prey Model	206
19	Epidemic Modeling	212
20	Reestablishment of Wolves	216
21	Lyme Disease	228
22	Tragedy of the Commons	251
Part 6	Economic Models	257
23	Introduction to Modeling Economic Processes	259
24	The Competitive Firm	261
25	The Monopolistic Firm	267
	25.1 Basic Model	267
	25.2 Taxing Monopolies	270
* 26	Competitive Equilibrium	276
27	Substitution	280
	27.1 Isoquants	280
	27.2 Finding the Profit-Maximizing Output Level and Input Combinations	282
28	Time Value	287
29	Opportunity Cost	292
30	Optimal Tree Cutting	297
31	Fisheries Reserve Model	301
32	Dynamic Scarcity	317
	32.1 Competitive Scarcity	317
	32.2 Monopoly Scarcity	323
33	Market Game	330
34	Pig Cycle	338
Part 7	Engineering Models	349
35	The Assembly Line	351
	35.1 Basic Model	351
	35.2 Car Assembly Line	356
36	Models of Gravity and Acceleration	362
	36.1 Falling Rock	362
	36.2 Projectile Motion	366

36.3	Mass-Damper-Spring	369
36.4	Mechanical Amplifier	372
37	Chaos	376
37.1	A New Paradigm	376
37.2	Jenson Chaos	377
37.3	Lorenz Chaos	380
37.4	Two-Well Chaos	382
Part 8	Conclusion	385
38	Beginning a Dialog	387
Appendixes		389
A1	System Requirements	391
A1.1	Macintosh	391
A1.2	Windows	391
A2	Quick Help Guide	392
A2.1	Overview of the STELLA(r) Operating Environment	392
A2.2	Drawing an Inflow to a Stock	393
A2.3	Drawing an Outflow from a Stock	394
A2.4	Replacing a Cloud with a Stock	395
A2.5	Bending Flow Pipes	396
A2.6	Repositioning Flow Pipes	396
A2.7	Reversing Direction of a Flow	397
A2.8	Flow Define Dialog—Builtins	397
A2.9	Moving Variable Names	398
A2.10	Drawing Connectors	399
A2.11	Defining Graphs and Tables	400
A2.12	Dynamite Operations on Graphs and Tables	401
