|----------------------------------------------------------------------------------------------|------|
| <b>Foreword</b> . . . . .                                                                    | xi   |
| <b>Author's preface</b> . . . . .                                                            | xiii |
| <b>Acknowledgements</b> . . . . .                                                            | xv   |
| <b>List of illustrations</b> . . . . .                                                       | xvii |
| <b>Introduction</b> . . . . .                                                                | xxi  |
| <br>                                                                                         |      |
| <b>1 MOTIVATIONS FOR DEEP-SPACE TRAVEL</b> . . . . .                                         | 1    |
| 1.1 An inventory of near-Earth objects . . . . .                                             | 4    |
| 1.2 Considering NEO origins . . . . .                                                        | 6    |
| 1.3 The difficulty of telescopic exploration of NEOs near their point of<br>origin . . . . . | 7    |
| 1.4 Robotic exploration options . . . . .                                                    | 9    |
| 1.5 Directed panspermia . . . . .                                                            | 9    |
| 1.6 Bibliography . . . . .                                                                   | 10   |
| <br>                                                                                         |      |
| <b>2 THE REALMS OF SPACE</b> . . . . .                                                       | 13   |
| 2.1 The question of origins . . . . .                                                        | 13   |
| 2.2 Realms of fire, water and ice . . . . .                                                  | 15   |
| 2.3 Solar radiant flux and planet effective temperature . . . . .                            | 16   |
| 2.4 The effect of atmospheric optical depth . . . . .                                        | 18   |
| 2.5 The lifetime of a planet's atmosphere . . . . .                                          | 18   |
| 2.6 Comparative planetology: an appreciation of the lifezone . . . . .                       | 20   |
| 2.7 Beyond the planets: the reefs of space . . . . .                                         | 21   |
| 2.8 Bibliography . . . . .                                                                   | 22   |
| <br>                                                                                         |      |
| <b>3 TOMORROW'S TARGETS</b> . . . . .                                                        | 25   |
| 3.1 The TAU mission: an early NASA/JPL extrasolar mission study . . . . .                    | 26   |
| 3.2 SETIsail and ASTROsail: proposed probes to the Sun's gravity<br>focus . . . . .          | 27   |

|          |                                                                            |            |
|----------|----------------------------------------------------------------------------|------------|
| 3.3      | The Aurora project: a sail to the heliopause . . . . .                     | 29         |
| 3.4      | The NASA Interstellar Initiative . . . . .                                 | 30         |
| 3.5      | The NASA heliopause sail . . . . .                                         | 30         |
| 3.6      | The NASA Kuiper Belt explorer . . . . .                                    | 31         |
| 3.7      | A probe to the Oort Cloud . . . . .                                        | 32         |
| 3.8      | Bibliography . . . . .                                                     | 33         |
| <b>4</b> | <b>SPACE PROPULSION TODAY . . . . .</b>                                    | <b>35</b>  |
| 4.1      | Rocket history and theory . . . . .                                        | 35         |
| 4.2      | The solar-electric drive . . . . .                                         | 39         |
| 4.3      | Unpowered planetary gravity assists . . . . .                              | 40         |
| 4.4      | Powered solar gravity assists . . . . .                                    | 44         |
| 4.5      | The solar-photon sail . . . . .                                            | 46         |
| 4.6      | Bibliography . . . . .                                                     | 54         |
| <b>5</b> | <b>THE INCREDIBLE SHRINKING SPACEPROBE . . . . .</b>                       | <b>57</b>  |
| 5.1      | The small and the very small . . . . .                                     | 58         |
| 5.2      | Nanotechnology: the art and science of the very, very small . . . . .      | 59         |
| 5.3      | Nanotechnology and spaceflight: near-term possibilities . . . . .          | 61         |
| 5.4      | Nanotechnology and spaceflight: long-term possibilities . . . . .          | 62         |
| 5.5      | Possible limits to nanotechnology . . . . .                                | 63         |
| 5.6      | Bibliography . . . . .                                                     | 64         |
| <b>6</b> | <b>THE NUCLEAR OPTION . . . . .</b>                                        | <b>65</b>  |
| 6.1      | Nuclear basics . . . . .                                                   | 65         |
| 6.2      | Nuclear-electric propulsion (NEP) . . . . .                                | 69         |
| 6.3      | Nuclear-pulse propulsion: Orion, Daedalus and Medusa . . . . .             | 72         |
| 6.4      | Inertial electrostatic confinement and gas-dynamic mirror fusion . . . . . | 75         |
| 6.5      | Antimatter: the ultimate fuel . . . . .                                    | 76         |
| 6.6      | Bibliography . . . . .                                                     | 79         |
| <b>7</b> | <b>TWENTY-FIRST CENTURY STARFLIGHT . . . . .</b>                           | <b>83</b>  |
| 7.1      | Laser/maser sailing fundamentals . . . . .                                 | 84         |
| 7.2      | Starship deceleration using the magsail . . . . .                          | 87         |
| 7.3      | Thrustless turning . . . . .                                               | 90         |
| 7.4      | Perforated light sail optical theory . . . . .                             | 92         |
| 7.5      | The Fresnel lens: a method of improving laser beam collimation . . . . .   | 94         |
| 7.6      | Round-trip interstellar voyages using beamed-laser propulsion . . . . .    | 96         |
| 7.7      | Interstellar particle-beam propulsion . . . . .                            | 97         |
| 7.8      | Bibliography . . . . .                                                     | 98         |
| <b>8</b> | <b>ON THE TECHNOLOGICAL HORIZON . . . . .</b>                              | <b>101</b> |
| 8.1      | The hydrogen-fusing interstellar ramjet . . . . .                          | 101        |
| 8.2      | The ram-augmented interstellar rocket (RAIR) . . . . .                     | 104        |
| 8.3      | The laser ramjet . . . . .                                                 | 108        |

|           |                                                                                       |            |
|-----------|---------------------------------------------------------------------------------------|------------|
| 8.4       | The ramjet runway . . . . .                                                           | 110        |
| 8.5       | A toroidal ramscoop . . . . .                                                         | 112        |
| 8.6       | Bibliography. . . . .                                                                 | 115        |
| <b>9</b>  | <b>EXOTIC POSSIBILITIES</b> . . . . .                                                 | <b>117</b> |
| 9.1       | ‘Shoes and ships’: the potential of magnetic surfing . . . . .                        | 118        |
| 9.2       | ‘Sealing wax’: approaches to antigravity. . . . .                                     | 122        |
| 9.3       | ‘A boiling-hot sea’: zero-point energy and special-relativistic star drives . . . . . | 122        |
| 9.4       | ‘Cabbages and kings’: general relativity and spacetime warps . . . . .                | 126        |
| 9.5       | ‘Winged pigs’: some other exotic ideas. . . . .                                       | 128        |
| 9.6       | Bibliography. . . . .                                                                 | 128        |
| <b>10</b> | <b>OF STARS, PLANETS AND LIFE</b> . . . . .                                           | <b>133</b> |
| 10.1      | A short history of extrasolar planet detection efforts . . . . .                      | 133        |
| 10.2      | Methods of imaging extrasolar planets. . . . .                                        | 135        |
| 10.3      | Extrasolar planets found to date that orbit Sun-like stars . . . . .                  | 138        |
| 10.4      | How common are life-bearing worlds? . . . . .                                         | 140        |
| 10.5      | Terraforming: a way to increase the odds . . . . .                                    | 142        |
| 10.6      | Bibliography. . . . .                                                                 | 143        |
| <b>11</b> | <b>LIFE BETWEEN THE STARS</b> . . . . .                                               | <b>145</b> |
| 11.1      | Environmental obstacles to interstellar flight, and their removal . . . . .           | 146        |
| 11.2      | Options for onboard power between the stars . . . . .                                 | 149        |
| 11.3      | Close environment life support systems . . . . .                                      | 150        |
| 11.4      | Of worldships and interstellar arks . . . . .                                         | 151        |
| 11.5      | Hibernation for humans: the long sleep to $\alpha$ Centauri . . . . .                 | 153        |
| 11.6      | Bibliography. . . . .                                                                 | 154        |
| <b>12</b> | <b>CONSCIOUS SPACECRAFT</b> . . . . .                                                 | <b>157</b> |
| 12.1      | The von Neumann machine: can the computer eat the Galaxy? . . . . .                   | 158        |
| 12.2      | The cryogenic star-child . . . . .                                                    | 159        |
| 12.3      | The virtual star-traveller . . . . .                                                  | 159        |
| 12.4      | Bibliography. . . . .                                                                 | 160        |
| <b>13</b> | <b>MEETING ET</b> . . . . .                                                           | <b>161</b> |
| 13.1      | Are starships detectable? . . . . .                                                   | 162        |
| 13.2      | Motivations of star-travelling extraterrestrials . . . . .                            | 164        |
| 13.3      | Bibliography. . . . .                                                                 | 165        |
|           | <b>Afterword</b> . . . . .                                                            | <b>167</b> |
|           | <b>Nomenclature</b> . . . . .                                                         | <b>169</b> |
|           | <b>Glossary</b> . . . . .                                                             | <b>175</b> |
|           | <b>Index</b> . . . . .                                                                | <b>178</b> |
