Introduction	1
PART A: HUMAN REMAINS: DECAY, DNA, TISSUES AND FLUIDS	9
Chapter One: The decay, discovery and recovery of human bodies	11
The dead body	11
The stages of decomposition	12
Factors affecting the speed of decay	28
Discovery and recovery of human remains	35
Determining the age and provenance of skeletonized remains	39
Future developments	41
Chapter Two: Body fluids and waste products	45
Blood cells and blood typing	45
Methods for detecting blood	48
Confirming the presence of blood	51
Bloodstain pattern analysis	51
Artificial blood	70
Post mortem toxicological analysis of blood	71
Saliva and semen	72
Vitreous humor	75
Faeces and urine as forensic indicators	77
Future directions	82
Chapter Three: Molecular biology	85
The structure of DNA	86
DNA sampling	87
DNA profiling	88
Polymerase chain reaction	92
Short tandem repeat markers	97
Single nucleotide polymorphism markers	107
Determination of ethnicity	108
Determination of physical appearance	109
Determination of personality traits	110
Mobile element insertion polymorphisms	110
Mitochondrial DNA	112
RNA	115
DNA databases	116
Future developments	120

Chapter Four: Human tissues	123
The outer body surface	123
Hair	138
Bones	142
Teeth	151
Future developments	159
Chapter Five: Wounds	163
Definitions	163
Blunt force injuries	165
Sharp force traumas	172
Bone damage	180
Additional aspects of wound interpretation	183
Asphyxia	184
Pathology associated with drug use	190
Gunshot wounds	192
Bite marks	200
Burns and scalds	203
Ageing of wounds	205
Post mortem injuries	207
Future developments	209
PART B: INVERTEBRATES AND VERTEBRATES	211
Chapter Six: Invertebrates 1: biological aspects	213
An introduction to invertebrate biology	213
Invertebrates as forensic indicators in cases of murder or suspicious death	214
Invertebrates as a cause of death	238
Invertebrates as forensic indicators in cases of neglect and animal welfare	241
The role of invertebrates in food spoilage and hygiene litigation	243
The illegal trade in invertebrates	246
Invertebrate identification techniques	247
Future directions	250
Chapter Seven: Invertebrates 2: practical aspects	253
Calculating the PMI/time since infestation from invertebrate development rates	254
Complicating factors affecting earliest oviposition date calculations	260
Determination of the PMI using invertebrate species composition	266
Determination of the PMI using ectoparasites	267
Determination of movement from invertebrate evidence	267
Invertebrate evidence in cases of wound myiasis and neglect	269
Detection of drugs, toxins and other chemicals in invertebrates	271
Obtaining human/vertebrate DNA evidence from invertebrates	271
Determining the source and duration of invertebrate infestations of food products	272

Collecting invertebrates for forensic analysis	273
Killing and preserving techniques for invertebrates	276
Future directions	279
Chapter Eight: Vertebrates	283
Introduction	284
Vertebrate scavenging of human corpses	284
Vertebrates causing death and injury	291
Neglect and abuse of vertebrates	292
Vertebrates and drugs	293
Vertebrates and food hygiene	295
Illegal trade and killing of protected species of vertebrates	295
Identification of vertebrates	298
Future directions	309
PART C: PROTISTS, FUNGI, PLANTS AND MICROBES	313
Chapter Nine: Protists, fungi and plants	315
Introduction	316
Protists	316
Fungi	321
Plants	324
Plant secondary metabolites as sources of drugs and poisons	347
Illegal trade in protected plant species	351
Future directions	353
Chapter Ten: Bacteria and viruses	355
Introduction	355
The role of microorganisms in the decomposition process	356
Microbial profiles as identification tools	357
Microbial infections and human behaviour	370
Microbial infections that can be mistaken for signs of criminal activity ↓	372
The use of microorganisms in bioterrorism	373
Future directions	390
References	393
Index	417
