

Static and Dynamic Properties of High Temperature Superconducting Bearings

Von der Gemeinsamen Fakultät für
Maschinenbau und Elektrotechnik
der Technischen Universität Carolo-Wilhelmina
zu Braunschweig

zur Erlangung der Würde eines
Doktor-Ingenieurs (Dr.-Ing.)
genehmigte

DISSERTATION

von
Dipl.-Ing. Eduardo Portabella
Barcelona (Spanien)

Eingereicht am:	6. März 2000
Mündliche Prüfung am:	3. Mai 2000
Berichterstatter:	Prof. Dr.-Ing. Wolf-Rüdiger Canders
Mitberichterstatter:	Prof. Dr. Xavier Obradors

2000

Contents

1. Introduction	9
2. State of art	11
2.1. Rotating superconducting bearings	11
2.2. Linear motion HTSC bearings	15
References	17
3. Principles of magnetic bearings	19
3.1. Permanent magnet bearings	19
3.1.1. Basic principle	19
3.1.2. Radial and axial configurations	20
3.1.3. Multipolar arrangements	21
3.1.4. Energy losses and PM materials	22
3.2. Active electromagnetic bearings	23
3.2.1. Basic principle	23
3.2.2. Support force, stiffness and damping	24
3.2.3. Lateral stability	25
3.2.4. Active bearings with PM excitation	26
3.2.5. Energy losses	26
3.3. Superconducting magnetic bearings	27
3.3.1. Basic principle	27
3.3.2. Levitation force in the PM-HTSC interaction	28
3.3.3. Activation process	30
3.3.4. Magnetic stiffness and damping	31
3.3.5. Lateral stability	32
3.3.6. Material properties	33
3.3.7. Losses in HTSC bearings	35
3.4. Summary	36
References	36
4. Quasi-static behaviour of the PM-HTSC interaction	39
4.1. Design of an experimental set up	39
4.1.1. Displacement system	39
4.1.2. Force measurement	40

4.1.3. Magnetic field measurement	42
4.1.4. Cryogenic system	43
4.1.5. Control system	44
4.2. Long force cycles	45
4.3. Axial stiffness and damping	47
4.4. Levitation force in an OFCo process	49
4.5. Levitation drift	50
4.6. Force relaxation	52
4.7. Summary	54
References	55
5. Dynamics of PM-HTSC arrangements	57
5.1. Design of an experimental set up	57
5.1.1. First prototypes	57
5.1.2. Modified experimental system	59
5.1.3. Additional configuration	63
5.2. Preliminary tests	64
5.2.1. Inertial force	64
5.2.2. Air friction	66
5.2.3. Eddy currents	67
5.3. Vibrations in the mid-frequency range	69
5.4. Low frequency - large amplitude vibrations	74
5.5. High frequency – small amplitude vibrations	75
5.6. Influence of the activation process	76
5.7. Summary	78
References	78
6. Numerical modelling of HTSCs	79
6.1. Review HTSC macroscopic models	79
6.1.1. Analytical models	79
6.1.2. Perfect diamagnetic model	79
6.1.3. Trapped flux model	80
6.1.4. Magnetisation model	81
6.1.5. Conductivity model	81
6.1.6. Current density model	82

6.1.7. Flux flow-flux creep model	82
6.2. Critical state model	83
6.3. Calculation method	85
6.4. Long force cycles	89
6.5. Evaluation of multipolar arrangements	93
6.6. Calculation of stiffness and damping	97
6.7. Time dependence: Flux flow and creep model	100
6.8. Summary	104
References	104
7. Dynamic model of the PM-HTSC interaction	107
7.1. Equation of motion	107
7.2. Linear model	108
7.3. Evaluation of non-linear stiffness and damping functions	110
7.4. Harmonic solution using the averaging method	115
7.5. Steady state response in practical PM-HTSC arrangements	118
7.6. Levitation drift	124
7.7. Gap dependence in non-linear stiffness and damping functions	125
7.8. Influence of flux flow and eddy current losses	127
7.9. Summary	129
References	129
8. Design of a HTSC magnetic bearing	131
8.1. Bearing topology	131
8.2. HTSC characterisation	131
8.3. PM arrangement optimisation	132
8.4. Optimisation of the HTSC material	135
8.5. Support force and activation process	138
8.6. Calculation of the stiffness matrix	140
8.7. Amplitude dependence of the stiffness and damping	142
8.8. Dynamic behaviour	143
8.9. Summary	145
References	146
9. Conclusions	147
