Contents

Preface	xi
1 Introduction	1
1.1 Digital, Mobile, Global: Evolution of Networks	1
1.2 Classification of Mobile Communication Systems	2
1.3 Some GSM History	4
2 The Mobile Radio Channel and the Cellular Principle	7
2.1 Characteristics of the Mobile Radio Channel	7
2.2 Separation of Directions and Duplex Transmission	10
2.3 Multiple Access Procedures	12
2.3.1 Frequency Division Multiple Access (FDMA)	12
2.3.2 Time Division Multiple Access (TDMA)	13
2.3.3 Code Division Multiple Access (CDMA)	16
2.3.4 Space Division Multiple Access (SDMA)	18
2.4 Cellular Technology	21
2.4.1 Fundamental Definitions	21
2.4.2 Signal-to-Noise Ratio	22
2.4.3 Formation of Clusters	23
2.4.4 Traffic Capacity and Traffic Engineering	25
3 System Architecture and Addressing	27
3.1 General Description	27
3.2 Addresses and Identifiers	29
3.2.1 International Mobile Station Equipment Identity	29
3.2.2 International Mobile Subscriber Identity	30
3.2.3 Mobile Subscriber ISDN Number	30
3.2.4 Mobile Station Roaming Number	31
3.2.5 Location Area Identity	32
3.2.6 Temporary Mobile Subscriber Identity	32
3.2.7 Local Mobile Subscriber Identity	33
3.2.8 Cell Identifier	33

3.2.9	Base Transceiver Station Identity Code	33
3.2.10	Identification of MSCs and Location Registers	33
3.3	System Architecture	34
3.3.1	Mobile Station	34
3.3.2	Radio Network (BSS)	35
3.3.3	Mobile Switching Network (MSS)	36
3.3.3.1	Mobile Switching Center	36
3.3.3.2	Home and Visitor Registers	37
3.3.4	Operation and Maintenance (OMSS)	37
3.3.4.1	Network Monitoring and Maintenance	37
3.3.4.2	User Authentication and Equipment Registration	37
3.4	Subscriber Data in GSM	38
3.5	PLMN Configurations and Interfaces	40
4	Services	45
4.1	Bearer Services	46
4.2	Teleservices	48
4.3	Supplementary Services	50
5	Air Interface – Physical Layer	53
5.1	Logical Channels	54
5.2	Physical Channels	58
5.2.1	Modulation	58
5.2.2	Multiple Access, Duplexing, and Bursts	61
5.2.3	Optional Frequency Hopping	64
5.2.4	Summary	64
5.3	Synchronization	66
5.3.1	Frequency and Clock Synchronization	66
5.3.2	Adaptive Frame Synchronization	70
5.4	Mapping of Logical Channels onto Physical Channels	71
5.5	Radio Subsystem Link Control	75
5.5.1	Channel Measurement	76
5.5.1.1	Channel Measurement during Idle Mode	78
5.5.1.2	Channel Measurement during a Connection	79
5.5.2	Transmission Power Control	81
5.5.3	Disconnection due to Radio Channel Failure	84
5.5.4	Cell Selection and Operation in Power Conservation Mode ...	85
5.5.4.1	Cell Selection and Cell Reselection	85
5.5.4.2	Discontinuous Reception	87
5.6	Power-up Scenario	87
6	Coding, Authentication, and Ciphering	89
6.1	Source Coding and Speech Processing	89

6.2	Channel Coding	93
6.2.1	Overview	93
6.2.2	External Error Protection: Block Coding	96
6.2.2.1	Block Coding for Speech Traffic Channels	96
6.2.2.2	Block Coding for Data Traffic Channels	98
6.2.2.3	Block Coding for Signaling Channels	98
6.2.3	Internal Error Protection: Convolutional Coding	100
6.2.4	Interleaving	103
6.2.5	Mapping onto the Burst Plane	108
6.3	Security-Related Network Functions and Encryption	110
6.3.1	Protection of Subscriber Identity	110
6.3.2	Verification of Subscriber Identity	111
6.3.3	Generating Security Data	112
6.3.4	Encryption of Signaling and Payload Data	114
7	Protocol Architecture	117
7.1	Protocol Architecture Planes	117
7.2	Protocol Architecture of the User Plane	118
7.2.1	Speech Transmission	119
7.2.2	Transparent Data Transmission	122
7.2.3	Nontransparent Data Transmission	123
7.3	Protocol Architecture of the Signaling Plane	126
7.3.1	Overview of the Signaling Architecture	126
7.3.2	Transport of User Data in the Signaling Plane	134
7.4	Signaling across the User Interface (Um)	136
7.4.1	Layer 1 of the MS-BTS Interface	136
7.4.1.1	Layer 1 Services	137
7.4.1.2	Layer 1: Procedures and Peer-to-Peer Signaling	137
7.4.2	Layer 2 Signaling	139
7.4.3	Radio Resource Management	142
7.4.4	Mobility Management	147
7.4.5	Connection Management	151
7.4.6	Structured Signaling Procedures	156
7.4.7	Signaling Procedures for Supplementary Services	158
7.4.8	Realization of Short Message Services	161
7.5	Signaling at the A and Abis Interfaces	163
7.6	Signaling at the User Interface	168
8	Roaming and Switching	173
8.1	Mobile Application Part Interfaces	173
8.2	Location Registration and Location Update	174
8.3	Connection Establishment and Termination	178
8.3.1	Routing calls to Mobile Stations	178

8.3.1.1	Effect of the MSRN Assignment on Routing	179
8.3.1.2	Placement of the Protocol Entities for HLR Interrogation	179
8.3.2	Call Establishment and Corresponding MAP Procedures	182
8.3.3	Call Termination	185
8.3.4	MAP Procedures and Routing for Short Messages	186
8.4	Handover	186
8.4.1	Overview	186
8.4.2	GSM Intra-MSC Handover	189
8.4.3	Decision Algorithm for Handover Timing	189
8.4.4	MAP and Inter-MSC Handover	196
8.4.4.1	Basic Handover between two MSCs	196
8.4.4.2	Subsequent Handover	197
9	Data Communication and Networking	201
9.1	Reference Configuration	201
9.2	Overview of Data Communication	202
9.3	Service Selection at Transitions between Networks	204
9.4	Bit Rate Adaptation	205
9.5	Asynchronous Data Services	208
9.5.1	Transparent Transmission in the Mobile Network	208
9.5.2	Nontransparent Data Transmission	212
9.5.3	PAD Access to Public Packet-Switched Data Networks	214
9.5.3.1	Asynchronous Connection to PSPDN PADs	214
9.5.3.2	Dedicated PAD Access in GSM	215
9.6	Synchronous Data Services	216
9.6.1	Overview	216
9.6.2	Synchronous X.25 Packet Data Network Access	216
9.6.2.1	Basic Packet Mode	217
9.6.2.2	Dedicated Packet Mode	218
9.7	Teleservices: Fax	218
10	Aspects of Network Operation	223
10.1	Objectives of GSM Network Management	223
10.2	Telecommunication Management Network (TMN)	225
10.3	TMN Realization in GSM Networks	228
11	GSM – What Next?	233
11.1	Globalization	233
11.2	GSM Services in Phase 2+	233
11.2.1	Teleservices	234
11.2.2	Supplementary Services	236
11.3	GSM and Intelligent Networks	237
11.4	Beyond GSM: On the Road to UMTS	239
