Contents

Preface xxv

Acknowledgments xxix

Chapter 1

Introduction to the Programmer's Guide 1

- 1.1 About Computer Graphics Cards 1
- 1.2 About the Need for This Book 2
- 1.3 About This Book 2
- 1.4 Terms and Styles Used in This Book 3
- 1.5 About the Chapters in General 4
- 1.6 About the Chapters in Detail 4
- 1.7 Program Examples 6
- 1.8 Compilers and Assemblers 7

Chapter 2

The Features of the EGA and VGA 8

- 2.1 EGA/VGA Features 8
 - Read and Write Modes • Display Memory • Alphanumeric Modes
 - Graphics Modes • Downloadable Character Sets • Control Registers
 - Display Modes • EGA/VGA BIOS
- 2.2 Graphics Read and Write Modes 14
 - Write Mode 0 • Write Mode 1 • Write Mode 2 • Write Mode 3
 - Read Mode 0 • Read Mode 1
- 2.3 EGA and VGA Resolution 18
 - Spatial Resolution • Color Resolution
- 2.4 Connectors and Switches 22
 - EGA Video Output Connector • EGA Light Pen Connector • EGA

- Feature Connector • VGA Video Output Connector • VGA Micro Channel Connector
- 2.5 The Hercules Monochrome Graphics Card 25
Hercules Display Memory • Hercules Registers • Video Output Connector
- 2.6 The Color Graphics Adapter 28
CGA Display Memory • CGA Color Selection • CGA Control Registers • CGA Connectors
- 2.7 The Multicolor Graphics Array 32
- 2.8 The Professional Graphics Adapter 33
- 2.9 The 8514/A Display Adapter 34

Chapter 3

Graphics Hardware and Software 35

- 3.1 Computer Graphics Hardware 35
The Computer System • Microprocessors • Coprocessors • Data Bus Size • Memory
- 3.2 Interactive Devices 39
Keyboard • Mouse • Trackball • Joystick • Light Pen • Digitizing Pad
- 3.3 Graphics Adapters 43
Host Interface • Display Memory • Graphics-related BIOS • Video Interface Cable
- 3.4 Monitors and Displays 52
Interlaced and Noninterlaced Displays • Vector Displays • Raster Scan Displays • Flat Panel Displays • Monochrome Monitors
- 3.5 Signal Acquisition 57
Input Channels • Analog-to-digital Converters • Video Frame Grabbers • Image Scanners
- 3.6 Hard-copy Devices 60
Printers • Interfacing to Printers • Printer Drivers • Impact Printers • Ink Jet and Thermal Printers • Laser Printers • Plotters • Photographic Slides
- 3.7 Graphics-related Software 66
Word Processors • Desktop Publishers • Charting Software Packages • Illustration Packages • Computer Assisted Design • Graphics Programming Environments • Font Editors

Chapter 4**The PC, C, and Assembly Language 72**

- 4.1 PC Hardware 72
PC Memory • Internal Registers • Processing Speed • BIOS
- 4.2 The C Language 85
Other High-level Languages • C and Assembly Language • Execution Speed • C Syntax • Memory Models
- 4.3 Assembly Language 106
Assembly Language Syntax • Instruction Mnemonics • Addressing Modes • Assembly Language Instructions • Interfacing C and Assembly Language • Passing Parameters • Typical Assembly Language Routines

Chapter 5**Principles of Computer Graphics 131**

- 5.1 Coordinate Systems 131
World Coordinate System • Display Coordinate System • Window Coordinate System • Device Coordinate System • Object Coordinate System
- 5.2 Coordinate Transformations 135
Scaling Data • Scaling the Magnitude of the Data • Scaling the Size of the Data • Translation • Rotation • Combining Transformations • Three-dimensional Transformations
- 5.3 The Character 140
Script Characters • Dot Matrix Characters • Character Sets • ASCII Standard • Alphanumeric and Graphics Display Modes • Drawing Characters in an Alphanumeric Mode • Drawing Characters in a Graphics Mode
- 5.4 The Point 145
Bit Addressing • Determining the Display Address • Interacting with Pixels • Reading a Pixel • Mode 6 • Multiple Bit Planes • Modes F, 10, 11, and 12 hex • Writing a Pixel • Using the Bit Mask and the Data Rotate Register • Multiple Bit Planes • Using the Map Mask Register • Writing to One Pixel in Multiple Planes • Set/Reset and Enable Set/Reset Registers • Writing to Multiple Pixels in Multiple Planes • Writing to All Planes Using Write Mode 2
- 5.5 The Line 158
Defining a Line • Determining the Length of a Line • Determining the Slope of a Line • The Linear Equation • Determining an In-

- dependent Variable • Drawing a Line Using the Linear Equation • Drawing a Line Using an Incremental Algorithm • The Bresenham Line Algorithm • Aliasing • Anti-aliasing • Drawing Horizontal Lines • Drawing Vertical Lines • Clipping
- 5.6 The Circle 170
 - Utilizing Symmetry • Drawing a Circle Using the Circle Equation • Drawing a Circle Using Parametric Equations • Bresenham's Circle Equation
- 5.7 The Image 174
 - Writing Images • Writing an Image a Bit Plane at a Time • Writing an Image a Pixel at a Time • Image Data Compression • Run-length Encoding • Image Processing
- 5.8 Color Theory 178
 - Describing Color • Color Models • The CIE Chromaticity Scale • The RGB Color Model • The CMY Color Model • The YIQ Color Model • The HSV and HLS Color Models • Color Dithering

Chapter 6

Alphanumeric Processing 182

- 6.1 EGA/VGA Character Processing 182
 - Local Character Sets • Special Alphanumeric Features • Processing Characters Quickly • Flexibility of the Alphanumeric Modes
- 6.2 Character Shape 185
 - Character Box Size • Representing Characters in Memory • Character Tiling • Downward-extending Characters • Character Layout Limitations • The 8-by-8 Character Font • The 8-by-14 Character Font • The 9-by-14 Character Font • The 8-by-16 Character Font • The 9-by-16 Character Font
- 6.3 Character Attributes 192
 - Monochrome Mode • Sixteen-color Mode
- 6.4 Display Memory 194
 - Display Memory in Host Memory Address Space • Bit Plane Utilization • Display Memory Address Compatibility • Fonts in Display Memory • Odd/Even Operation • Reading Fonts in Odd/Even Modes • Writing Directly to Memory • Determining a Physical Memory Address • Writing Characters and Attributes • Reading and Writing Characters via BIOS
- 6.5 Alphanumeric Display Modes 207
 - Modes 0 and 1 (EGA/VGA) • Modes 2 and 3 (EGA/VGA) • Mode 7 (EGA/VGA)

- 6.6 The Cursor 215
Cursor-related BIOS Calls • Cursor Shape • Enabling and Disabling the Cursor
- 6.7 Downloadable Character Sets 218
Character Size • Fonts Resident in Display Memory • Fonts in the Alphanumeric Modes • The Location of a Character in Alphanumeric Modes • Fonts in the Graphics Modes • The Location of a Character in the Graphics Modes • Font-related BIOS Calls • Character Sets in the Alphanumeric Modes • EGA Alphanumeric Default Character Sets • VGA Alphanumeric Default Character Sets • Loading Character Sets into Display Memory • Character Sets in the Graphics Modes • Default Character Sets in the Graphics Modes

Chapter 7

Graphics Processing 228

- 7.1 Characters 228
Character Sets • Storing Characters in Display Memory • Writing Characters Quickly • Graphics Text Processing through BIOS • Finding a Character Set • Locating a Bit Pattern within a Character Set • Writing the Bit Pattern to Display Memory
- 7.2 Graphics Attributes 233
Two-color Mode • Monochrome Mode • Four-color Mode • Sixteen-color Mode • 256-color Mode
- 7.3 Display Memory 236
Display Memory in Host Memory Address Space • Display Pages • Display Memory Organization
- 7.4 Graphics Display Modes 239
Number of Colors versus Display Planes • CGA Emulation • CGA Graphics Modes • Modes 4 and 5 (EGA/VGA) • Two-color Graphics Modes • Mode 6 • Mode 11 Hex (VGA) • Hercules/MDA Emulation • Mode F Hex (EGA/VGA) • 16-color Graphics Modes D, E, 10, and 12 Hex (D,E,10,EGA/VGA;12 VGA) • Mode D Hex (EGA/VGA) • Mode E Hex (EGA/VGA) • Mode 10 Hex (EGA/VGA) • Mode 12 Hex (VGA Only) • 256-color Mode (VGA only) • Mode 13 Hex (VGA Only)
- 7.5 Writing to Display Memory 258
Writing to Display Memory: BIOS • Writing to Display Memory: Direct • Graphics Data Structures • Writing to a Pixel • Write Mode 0 (EGA/VGA) • Data Rotator • Function Select • Plane Selection • Bit Selection • Set/Reset Function • Write Mode 1 (EGA/VGA) • Write Mode 2 (EGA/VGA) • Write Mode 3 (VGA Only)

- 7.6 Reading from Display Memory 273
 - Reading Display Memory: BIOS • Reading Display Memory: Direct • Read Mode 0 • Read Mode 1
- 7.7 Display Memory Timing 278
 - Sync Pulses • Horizontal Refresh Timing • Vertical Refresh Timing

Chapter 8

Color Palette and Color Registers 285

- 8.1 Color Palette 285
 - Palette Registers • Codes Contained in the Palette Registers • EGA Palette Register Outputs • VGA Palette Register Outputs • Accessing the Palette Registers
- 8.2 Converting Data to Colors 291
 - Monochrome Modes • Monochrome Alphanumeric Mode • Monochrome Graphics Mode • RGBI Color Mode • RGBI Alphanumeric Modes • RGBI Graphics Modes • Two-color Modes • CGA Two-color Emulation • VGA Two-color Emulation • Enhanced Color Modes • Enhanced Color: EGA • Enhanced Color: VGA • 256-color Mode
- 8.3 Color Registers 298
 - Color Register Addressing • Four Banks of 64 Color Registers • Sixteen Banks of 16 Color Registers • Color Register Organization • Color Register Default Values • Accessing the Color Registers • Modifying the Color Registers through BIOS • Modifying the Color Registers Directly • Color Conversion • Selective Color Planes

Chapter 9

Reading the State of the EGA and VGA 312

- 9.1 Reading the State of the Adapter 312
- 9.2 Reading the Display Registers 312
 - Reading EGA Registers • EGA Video Parameter Table • Initial Values of the EGA Registers • Reading VGA Registers
- 9.3 Reading BIOS Tables from Memory 317
 - Reading Interrupt Vectors • BIOS Storage in Host Memory
- 9.4 Reading the State of the EGA and VGA Adapters 317
 - Reading the EGA State • Reading the VGA State • Functionality/State Information • VGA Static Information Table • Typical Static Function Block • VGA Display Combination Code • VGA: Saving and Restoring

- 9.5 Testing for Hardware 332
 Testing for Adapters • Testing for Monitors • Reading System Parameters • Reading the Cursor Status • Video Parameters

Chapter 10

The EGA/VGA Registers 339

- 10.1 The EGA/VGA Registers 339
 Register Groups • Accessing the Registers • The Register Diagrams
- 10.2 The General or External Registers 342
 Miscellaneous Output Register • Feature Control Register • Input Status #0 Register • Input Status #1 Register
- 10.3 The Sequencer Registers 349
 Reset Register • Clocking Mode Register • Map Mask Register • Character Map Select Register • Memory Mode Register
- 10.4 The CRT Controller Registers 358
 Horizontal Total Register • Horizontal Display End Register • Start Horizontal Blanking Register • End Horizontal Blanking Register • Start Horizontal Retrace Register • End Horizontal Retrace Register • Vertical Total Register • Overflow Register • Preset Row Scan Register • Maximum Scan Line Register • Cursor Start Register • Cursor End Register • Start Address High Register • Start Address Low Register • Cursor Location High Register • Cursor Location Low Register • Vertical Retrace Start Register • Vertical Retrace End Register • Light Pen High Register • Light Pen Low Register • Vertical Display End Register • Offset Register • Underline Location Register • Start Vertical Blank Register • End Vertical Blank Register • Mode Control Register • Line Compare Register
- 10.5 The Graphics Controller Registers 386
 Graphics #1 Position Register • Graphics #2 Position Register • Set/Reset Register • Enable Set/Reset Register • Color Compare Register • Data Rotate Register • Read Map Select Register • Mode Register • Miscellaneous Register • Color Don't Care Register • Bit Mask Register
- 10.6 The Attribute Controller Registers 404
 Attribute Address Register • Palette Registers • Mode Control Register • Overscan Color Register • Color Plane Enable Register • Horizontal Pixel Panning Register • Color Select Register
- 10.7 Color Registers 418
 PEL Address Write Mode Register • PEL Address Read Mode Register • PEL Data Register • DAC State Register • PEL Mask Register

Chapter 11

The EGA/VGA BIOS 422

- 11.1 EGA/VGA BIOS Descriptions 422
- 11.2 Display Modes 423
 - Set Video Mode (EGA/VGA)
- 11.3 Cursor Control 427
 - Set Cursor Type (EGA/VGA) • Set Cursor Position (EGA/VGA) • Read Cursor Position (EGA/VGA)
- 11.4 Light Pen Position 429
 - Read Light Pen Position (EGA)
- 11.5 Display Page Selection 430
 - Select Active Display Page (EGA/VGA)
- 11.6 Scroll Screen 431
 - Scroll Active Page Up (EGA/VGA) • Scroll Active Page Down (EGA/VGA)
- 11.7 Read/Write Characters 433
 - Read Attribute/Character Pair (EGA/VGA) • Write Attribute/Character Pair (EGA/VGA) • Write Character Only (EGA/VGA)
- 11.8 Color Palette 438
 - Set Color Palette (EGA/VGA)
- 11.9 Read/Write Pixel 440
 - Write Pixel (EGA/VGA) • Read Pixel (EGA/VGA) • Write TTY Character (EGA/VGA) • Return Current Video State (EGA/VGA)
- 11.10 Palette Registers 443
 - Set Individual Palette Registers (EGA/VGA) • Set Overscan Register (EGA/VGA) • Set All Palette Registers and Overscan Register (EGA/VGA) • Toggle Blink/Intensity Bit (EGA/VGA) • Read Individual Palette Register (VGA) • Read Overscan Register (VGA) • Read All Palette Registers and Overscan Register (VGA)
- 11.11 Color Registers 450
 - Set Individual Color Register (VGA) • Set Block of Color Registers (VGA) • Select Color Page (VGA) • Read Individual Color Register (VGA) • Read Block of Color Register (VGA) • Read Current Color Page Number (VGA) • Sum Color Values to Gray Scale (VGA)
- 11.12 Character Generation 455
 - User Alpha Load (with Reset) (EGA/VGA) • ROM Monochrome Set (with Reset) (EGA/VGA) • ROM 8×8 (with Reset) (EGA/VGA) • Set Block Specifier (EGA/VGA) • ROM 8×16 Character Set (with Reset) (VGA) • User Alpha Load (EGA/VGA) • ROM Monochrome

Set (EGA/VGA) • ROM 8×8 Set (EGA/VGA) • ROM 8×16 Set (VGA only) • User Graphics Characters INT 1FH 8×8 (EGA/VGA) • User Graphics Characters (EGA/VGA) • Graphics Mode ROM 8×14 Character Set (EGA/VGA) • Graphics Mode ROM 8×8 Set (Double Dot) (EGA/VGA) • Graphics Mode ROM 8×16 Set (VGA) • Return Character Generator Information (EGA/VGA)

11.13 Alternate Select 472

Return Video Information (EGA/VGA) • Select Alternate Print Screen Routine (EGA/VGA) • Select Scan Lines for Alphanumeric Modes (VGA) • Default Palette Loading During Mode Set (VGA) • Video Enable/Disable (VGA) • Summing to Gray Scales (VGA) • Cursor Emulation (VGA) • Display Switch (VGA) • Video Screen On/Off (VGA)

11.14 Writing a String of Characters 480

Write String of Characters (EGA/VGA)

11.15 Return Condition of the VGA 481

Read/Write Display Combination Code (VGA) • Return Functionality/State Information (VGA) • Save/Restore Video State (VGA)

Chapter 12

Programming Examples 485

12.1 List of Program Listings 485

12.2 Introduction 488

12.3 Naming Conventions 489

12.4 Macro Expansions 490

12.5 Controlling and Reading the Status of the Display 491

12.6 Determining the State of the VGA Adapter 494

12.7 Alphanumerics 497

Reading and Writing Characters • Character Strings

12.8 Cursor Control 506

12.9 Scrolling 507

12.10 Drawing a Point 509

12.11 Drawing a Line 510

Horizontal Lines • Vertical Lines • Bresenham's Algorithm • Drawing a Line in Mode 13 Hex

12.12 Drawing a Circle 535

12.13 Drawing an Image 538

Writing to a Window • Reading from a Window

12.14 Data Decoding 548

- 12.15 Clipping 551
- 12.16 Clearing Display Memory 555
 - Clearing a Character Row • Clearing a Window • Clearing a Page
- 12.17 Downloading Character Fonts 564
 - Writing a Font in the Alphanumeric Modes • Writing a Font in the Graphics Modes • Reading the Font Information • Selecting a Character Set • Reading a Character Font • Modifying a Character Set • Writing Characters without BIOS
- 12.18 Color Palette 582
 - Encoding and Decoding Colors • Writing to the Palette Registers • Reading from the Palette Registers • Displaying the Palette and Color Registers
- 12.19 Color Registers 588
 - Reading from the Color Registers • Writing to the Color Registers • Summing to Gray Scale • Default Loading of the Palette and Color Registers
- 12.20 Special Effects 592
- 12.21 Writing to the EGA/VGA Registers 594

Chapter 13

The Super VGA 596

- 13.1 The Super VGA Card 596
 - Super VGA Terminology • Super VGA Feature Enhancements • SuperVGA Speed Enhancements • Super VGA Cost Reductions • Super VGA Popularity • Competing Graphics Standards
- 13.2 Components of the Super VGA 601
 - Clock Oscillators • VGA ASIC Chip • Display Memory • Video Output Circuitry • Host Interface • 16-bit Memory Transfers • System Throughput • Graphics Displays
- 13.3 Super VGA BIOS 617
- 13.4 The Super VGA Standards 618
 - Standardizing the Super VGA • Standardizing Terminology • Identifying the VGA and Card Capabilities • Accessing the Super VGA Extended Registers • Accessing the Super VGA Display Memory • Accessing the Super VGA Display Modes • Other Super VGA Features

- 13.5 Video Electronics Standards Association (VESA) 625
 VESA Display Mode 6a hex • VESA Video BIOS Extensions • BIOS Return Super VGA Information • BIOS Return Super VGA Mode Information • BIOS Set Super VGA Video Mode • AH=4f Hex, AI=03h; Return Current VGA Video Mode • BIOS Save/Restore Super VGA Video State • BIOS CPU Video Memory Window Control
- 13.6 Identifying the Graphics Environment 638
 The Graphics Environment • Is VESA Supported? • Determining Which VGA Is Present • Determining the VGA Host Interface • Determining Which Modes are Supported • Determining the Emulation Modes • Determining the Resolution of the Color DAC
- 13.7 Controlling the Super VGA 645
 Enabling and Disabling the VGA • Configuring the Host Interface • Accessing the VGA Registers • Setting the Display Mode • Controlling Emulation • Controlling Vertical Interrupts • Saving and Restoring the VGA State
- 13.8 Memory Addressing Techniques 653
 Single-Paging Systems • Dual-Paging Systems • Banks, Planes and Pages • 16-color Mode Planar Memory Organization • Common 16-color Planar Display Modes • Common 256-Color Packed Display Modes • 16-bit Color Display Modes • 16-bit Color Palette DAC
- 13.9 Features of the Super VGA Chips 677
 VGA Chip Manufacturers Detailed in this Book
- 13.10 Standard VGA Registers Revisited 678

Chapter 14

Super VGA Code Basics 680

- 14.1 Introduction 680
 Determining Where the Super VGA Ports are Mapped
- 14.2 Transferring Data Within a Single Bank 681
 Determining the Starting Address • Writing to a Single Bank • Reading from a Single Bank • Clearing a Single Bank • Writing to Four Display Planes • Reading from Four Display Planes • Clearing Four Display Planes
- 14.3 Transferring Data to Two Banks 694
- 14.4 Transferring Data to Multiple Banks 695
 Techniques • Single-Row Transfers • Multiple-Row Transfers

- 14.5 Transferring Windows 698
Transfers Within a Single Bank • Transfers Crossing Multiple Banks
- 14.6 Crossing Bank Boundaries at the End of a Line 700
Writing a Window in 256-color Mode Aligned Bank Transitions •
Reading a Window in 256-color Mode Aligned Bank Transitions
• Clearing a Window in 256-color Mode Aligned Bank Transitions
- 14.7 Transferring Data Across Generalized Bank Transitions 706
- 14.8 Handling a Window in 256-color Modes 707
Writing a Window in 256-color Modes • Reading a Window in 256-
color Modes • Clearing a Window in 256-color Modes
- 14.9 Handling a Window in 16-color Modes 716
Writing a Window in 16-color Modes • Reading a Window in 16-
color Modes • Clearing a Window in 16-color Modes
- 14.10 Drawing Single Pixels 724
Drawing a Pixel in 256-color Modes • Drawing a Pixel in 16-color
Modes •
- 14.11 Drawing a Line 729
Drawing a Line in 256-color Modes • Drawing a Line in 16-color
Modes
- 14.12 Selecting a Start Address 733
- 14.13 Positioning the Cursor 736
- 14.14 Dispatching to the Specific Super VGAs 736
Identifying the VGA During Setup • Identifying the VGA at Low-
level Functions • Sending Identification to Each Function

Chapter 15

ATI Technologies

- 15.1 Introduction to the ATI Technologies Super VGA Chips 738
Non-Standard Display Modes • Locating the Extended Register
Set • Describing the ATI Extended Registers
- 15.2 Configuring the ATI Super VGA 740
Configuration Fields and Setup Program
- 15.3 Controlling the ATI Super VGA 741
- 15.4 Inquiring for the ATI Super VGA Configuration 741
Identifying the ATI VGA Card • Identifying Which ATI Chip •

- Identifying the ATI Chip Revision • Identifying the VGA Environment
- 15.5 ATI Technology Display Modes 748
Display Mode 65 hex • Display Mode 65 hex • Display Mode 67 hex
- 15.6 Accessing the ATI Display Memory 754
Single Bank Mode • Dual-bank Mode
- 15.7 Controlling the CRT Address Generation 762
Controlling the Start Address • Cursor Control • Controlling the Display Offset
- 15.8 ATI Technologies BIOS Extensions 765
Is Mode Available?

Chapter 16**Chips and Technologies 766**

- 16.1 Introduction to the Chips and Technologies Chip Set 766
Emulation • Processing Speed • 82c451 Chip • 82c452 Chip • 82c453 Chip • 82c455 Chip • 82c456 Chip
- 16.2 Configuring the Chips and Technologies Super VGA 770
Configuring the Chips and Technologies VGAs • Configuring the Flat-Panel VGAs • On-Card ROM
- 16.3 Controlling the Chips and Technologies Super VGAs 774
Setup Mode • Enabling and Resetting the Super VGAs • Setup Registers • Controlling the Flat-Panel VGAs • Gray Levels and Color Attributes for Flat-Panel VGAs • Frame Rate Control in the 82c456 • Flat-Panel Palette • Flat-Panel SmartMap • Flat-Panel Compensation
- 16.4 Inquiring about the Chips and Technologies Configuration 790
Identifying the Chips and Technologies VGA • Identifying Which Chips and Technologies VGA • Determining the Attribute Flip-Flop Status • Addressing the Attribute Registers • VRAM Memory 82c453 • 82453 on a PC or AT •
- 16.5 Chips and Technologies Display Modes 795
- 16.6 Accessing Chips and Technologies Display Memory 795
Accessing 82c451 Display Memory • Accessing 82c452/453 Display Memory • Accessing 82c453 Display Memory • Single Paging

- Bank Switching for the 82c451,455,456 • Bank Switching for the 82c452 and 82c453 • Dual Paging • Hardware Bit Masking 82c453 • Hardware Read/Modify/Write Cycles 82c453 • Hardware Fast Font Paint 82c453 • Scratch Registers on 82c453
- 16.7 Controlling the CRT Address Generation 817
Controlling the Display Start Address • Controlling the Cursor Start Address • Controlling the Display Offset
- 16.8 Chips and Technologies BIOS Extensions 823
Get Controller Information • Set Emulation Mode • Auto Emulation Control • Set Power-on Video Conditions • Enhanced Save/Restore Video State Function
- 16.9 Chips and Technologies Special Features 827
Anti-Aliased Display Fonts • Downward Emulation • Interrupt Skipping • Hardware Cursor

Chapter 17
Genoa Systems 832

- 17.1 Introduction to the Genoa Super VGA Chips 832
Non-Standard Display Modes
- 17.2 Configuring the Genoa Super VGA 833
Bus Data Widths and Switch Configurations • Speed Enhancements • Monitor Type • Emulation • VGA/EGA/MDA/Hercules Emulation • CGA Emulation
- 17.3 Controlling the Genoa Super VGA 838
- 17.4 Inquiring for the Genoa Super VGA Configuration 838
Identifying the Genoa VGA Card • Identifying Which Genoa Chip • Identifying the Genoa Chip Revision • Identifying the VGA Environment
- 17.5 Genoa Technology Display Modes 844
Display Mode 7F hex
- 17.6 Accessing the Genoa Display Memory 848
Bank Select • Memory Configuration • Read/Write Bank Switching
- 17.7 Controlling the CRT Address Generation 854
Controlling the Start Address • Cursor Control • Controlling the Display Offset

Chapter 18**The Paradise Super VGA Chips 857**

- 18.1 Introduction to the Paradise/Western Digital VGA
 - The PVGA1a Super VGA Chip • The WD90C00 Super VGA Chip • The WD90C10 Super VGA Chip • The WD90C11 Super VGA Chip
- 18.2 Configuring the Paradise Super VGA 860
 - 8- or 16-bit Bus Interface • BIOS ROM Bus Width • BIOS ROM Mapping • 16-bit Port Mapping •
- 18.3 Controlling the Paradise Super VGA 863
 - WD90C00 Locking • WD90C00,10 and 11 Scratch Pad • WD90C11 Scratch Pad • WD90C00,10 and 11 Vertical Interrupts • Control of 46E8 Global Enable • WD90C10/11 Cursor Control • Enhanced WD90C10/11 Speed Control
- 18.4 Inquiring About the Paradise Super VGA Configuration 871
 - Identifying the Paradise Card • Identifying the Paradise Chip • Identifying the WD90C11 Configuration
- 18.5 Paradise Display Modes 876
 - Alphanumeric Modes • 132-Column Alphanumerics Modes • Paradise Graphics Modes • PVGA1A Graphics Modes • WD90Cxx Graphics Modes • Mode 5B 1024 by 768 Four-Color Display Mode • Mode 5A 1024 by 768 Two-Color Display Mode
- 18.6 Accessing the Paradise Display Memory 881
 - Bank Addressing • Memory Size and Mapping • Single Page Register Mode • 32-Kbyte Dual Page Registers Mode • Read/Write Dual Page Registers Mode • Page Mode Alphanumerics
- 18.7 Controlling the CRT Address Generation 897
 - Display and Cursor Start Address Generation • Controlling the Display Offset • Controlling the Display Offset • The Display Offset • Border Display
- 18.8 BIOS Extensions 900
 - Parametric Mode Set • Set VGA Mode • Set Non-VGA Mode • Extended Mode Status • Lock VGA or Non-VGA Mode • Set Non-VGA MDA/Hercules Mode • Set Non-VGA CGA Mode • Set VGA Mono Mode • Set VGA Color Mode • Write a PR Register • Read a PR Register • Set Analog EGA Emulation

Chapter 19**The Trident Super VGA Chip Sets 907**

- 19.1 Introduction to the Trident VGA 907

- 19.2 Configuring and Controlling the Trident VGA 907
Configuring the Trident Super VGAs
- 19.3 Controlling the Trident 8800 and 8900 909
- 19.4 Determining the Status of the Trident Super VGAs 910
Identifying the Trident VGA • Identifying Which Trident VGA •
Determining the Trident VGA Environment
- 19.5 Trident Display Modes 913
- 19.6 Accessing the Trident Display Memory 914
- 19.7 Controlling the CRT Address Generation 922
Controlling the Display Start Address • Controlling the Cursor
Start Address • Controlling the Display Offset
- 19.8 Trident BIOS Extensions 925

Chapter 20

The Tseng Labs Super VGA Chip 926

- 20.1 Introduction to the Tseng Labs VGA 926
ET3000 Chip • ET4000 Chip
- 20.2 Configuring the Tseng Labs VGA 928
8- or 16-bit Bus Interface • On-Card ROM • Linear or Segmented
Addressing • Interlaced or Non-interlaced Control • Extended
Vertical Timing
- 20.3 Controlling the Tseng Labs VGA 933
Enabling the VGA • Switching Alphanumeric/Graphic Modes
- 20.4 Inquiring About the Tseng Configuration 935
Identifying the Tseng Chips • Identifying which Tseng Chips
- 20.5 Tseng Labs Display Modes 938
- 20.6 Accessing the Tseng Labs Display Memory 939
Reading and Writing to the Display Memory • ET3000 Bank Ad-
dressing • ET4000 Bank Addressing • Granularity • Dual Bank
Selection
- 20.7 Controlling the CRT Address Generation 949
ET3000 Display Start Address • ET4000 Display Start Address •
ET3000 Cursor Start Address • ET4000 Cursor Start Address •
Controlling the Display Offset
- 20.8 Tseng Labs BIOS Extensions 956
- 20.9 Tseng Labs Extra Features 956

Character Font Width • Gen-lock • Read/Modify/Write • Hardware Zoom and Pan • Multiple Soft Fonts

Chapter 21

The Video7 Super VGA Chip Sets

- 21.1 Introduction to the Video7/Headland Technologies VGA 962
- 21.2 Configuring the Video7 VGA 963
 - 8- or 16-bit Bus Interface • On-Card ROM
- 21.3 Controlling the Video7 VGA 964
 - Enabling the VGA • Enabling the Extended Registers • Speeding up Transfers •
- 21.4 Inquiring for the Video7 Super VGA Configuration 969
 - Chip Identification • Which Video7 VGA • Sense Switches • Inquiring through BIOS • Inquiring About Attribute Status
- 21.5 Video7 Display Modes 975
- 21.6 Accessing the Video7 Display Memory 976
 - Reading and Writing to the Display Memory • V7VGA Versions 1-3 • V7VGA Versions 4
- 21.7 Controlling the CRT Address Generation 992
 - CRT Display and Cursor Address Generation • Display Starting Address • Positioning the Cursor • Controlling the Display Offset
